Theme 2025

Resilient Growth, Responsible Future

The cover of IndianOil's Sustainability Report 2024–25 embodies our vision of progress that is both enduring and responsible. Titled "Resilient Growth, Responsible Future," the theme highlights our ability to adapt and thrive in a rapidly transforming energy landscape, while staying true to our commitment towards environmental stewardship and societal well-being. It reflects IndianOil's resolve to build a future-ready enterprise that drives growth through innovation and efficiency, even as we responsibly manage our ecological footprint and contribute to a sustainable tomorrow.

"Resilient Growth, Responsible Future," the theme captures our resolve to grow stronger while staying deeply aligned with environmental and social responsibility. It symbolizes our focus on strengthening the core, even as we transition towards a cleaner and more sustainable energy ecosystem.

We are steadily expanding our renewable energy portfolio, advancing leadership in green hydrogen, and positioning natural gas as a key transition fuel. These efforts are complemented by strategic investments in infrastructure, technology, and partnerships that enhance energy security while lowering our ecological footprint.

This journey is closely linked with our SPRINT transformation agenda, which empowers us to innovate, build efficiency, and prepare for a low-carbon future. Together, resilience and responsibility define IndianOil's path—ensuring growth that endures and a future that is sustainable for generations to come.

About the Report

Our sustainability report for FY 2024-25 is in its 20th year of publication, which is a testimony to IndianOil's progressiveness as one of the earliest companies to adopt sustainability reporting in India. Our report this year is titled ***Resilient Growth, Responsible Future*** and showcases the extensive efforts underway as IndianOil embraces and shapes the country's green transition agenda. Our sustainability goals have evolved with the changing sustainability priorities of the nation and the world. We are transforming ourselves to become India's largest integrated energy provider and in doing so we remain forward looking yet strongly committed to fortifying our core business and leveraging that strength to mobilize and accelerate new ones.

In this report, we present our many new initiatives in alternate, eco-friendly energy options that further our Net Zero agenda and contribute towards India's clean energy goals. This report presents our evolving sustainability priorities, our efforts in advancing research and development, our remarkable financial performance and market dominance, and our long-term vision for a climate challenged world. We remain completely committed to contributing positively towards the nation's and our stakeholders' economic and social development and to setting high sustainability standards for businesses in hard-to-abate sectors.

Main Objectives

- Present our sustainability goals and strategies and how they align with our material issues and stakeholder needs
- Communicate our sustainability performance transparently to stakeholders and enumerate how they address issues of material significance
- Showcase our continuous research and development efforts in sustainable technologies and practices
- Present our many initiatives across environmental, social and governance and their impact on stakeholders and society at large
- Highlight our efforts towards achieving Net-Zero emissions and the progress made in advancing India's Net Zero goals
- Demonstrate our alignment with the United Nations Sustainable Development Goals (UNSDGs)

Reporting Period

This sustainability report covers all information pertaining to IndianOil's environmental, social and governance performance from all its operations within India over the period extending from April 1, 2024 to March 31, 2025.

Scope and Boundary

Unless otherwise specified, the reporting boundary is limited to IndianOil's operational boundary within the Indian territory and does not consider assets outside India and joint venture firms & subsidiaries. The report uses data and information collated from all IndianOil operations within India, to present a comprehensive picture of our many sustainability initiatives and Net Zero impact driven activities and the performance achieved. For further details on the organization's business performance, please refer IndianOil's Integrated Annual Report 2024-25 and BRSR FY 2024-25. This report covers the following aspects of our business and presents our vertical-specific sustainability initiatives and their impact on operations.

Refining

The company's refining operations have always been the focus of the largest number of sustainability initiatives spanning across energy efficiency, emissions reduction and more sustainable processes.

Pipeline Transportation

The report highlights many pipeline transportation and transformation activities, with the objective of cutting back on pipeline emissions, minimizing environmental impact, facilitating the stable expansion of the company's pipeline networks as markets proliferate and finally, ensuring safe and efficient transportation of fuel.

Marketing

The report covers our rapid portfolio expansion of sustainable products and the many ways in which we are embedding sustainability into our distribution and retail chains. As our customers evolve, we are also integrating sustainability practices into our supply chain relationships.

Reporting standards and frameworks

Petrochemicals

Our petrochemical operations reflect the depth of our product portfolio and our constant efforts to do more with less and minimize environmental impact.

Alternative Energy Sources

We provide a detailed download on the many alternative energy areas that we are involved in – from green hydrogen, and renewables to biofuels and– the role that we are playing and the investments made. Alternative energy represents the next frontier of energy use and we remain committed to diversifying our energy portfolio and to facilitating the country's transition to a low-carbon economy.

Other businesses

Our portfolio extends beyond core operations, encompassing areas such as R&D, Cryogenics, Explosives, Natural Gas, City Gas Distribution, and Green Hydrogen.

Restatement of information

In the environment data, a few indicators have been restated in the GRI performance index.

External Assurance

The information shared in this Sustainability Report has been independently verified by TUV India Pvt. Ltd., following globally accepted standards such as ISAE 3000 (Revised) and ISAE 3410. This independent review looked closely at how we collect, manage, and present our data to make sure our reporting is both reliable and transparent. By going through this assurance process, we want to give our stakeholders confidence that the details in this report are accurate, consistent, and aligned with international best practices. The assessment covered the completeness and quality of the information disclosed, adding an extra layer of trust to our sustainability performance. Through external assurance, we are strengthening our commitment to transparency, accountability, and openness, while building trust with everyone who engages with our sustainability journey. A full assurance statement, including scope, criteria, and conclusions, can be found at the end of this Report.

Forward-looking statements

The articulation of our vision and our interpretation of future possibilities involves making assumptions. Therefore, this report may contain certain forward-looking statements about IndianOil that are based on our Management's informed conjectures and also on the information currently available with them. These forward-looking statements include, but are not limited to, statements relating to IndianOil's business projections, growth trajectories, trends and conditions in the industry and the geographical markets in which we operate; our future strategies, plans, objectives and goals. Likewise, our ability to control costs; and statements relating to prices, volumes, operations, margins, risk management and exchange rates may also be deemed speculative in nature as they are based on our understanding of future scenarios.

Website and feedback information

About IndianOil

IndianOil is one of India's most prominent companies and a key oil and gas player in the world. As an integrated energy provider, the company produces, refines, markets and distributes oil and gas, petrochemicals and alternative fuels. Established in 1959 under the Ministry of Petroleum and Natural Gas (MoP&NG), IndianOil's journey began with the first oil rig at Digboi in Assam. Today, the company is a ₹ 8,45,000 crore behemoth with a portfolio of 15 domestic and 11 overseas assets, 9 refineries and more than 20,000 kms spread of pipeline networks. It is a prestigious Central Public Sector Enterprise (CPSE) with a 'Maharatna' status, contributing handsomely to the national exchequer and responsible for safeguarding the nation's energy security and sovereignty.

IndianOil remains the vanguard for India's clean energy transition and has taken a first-mover position among the energy CPSEs in incubating and developing various alternative fuel options and in building a robust ecosystem for this transition. We have been consistently investing in research and development with the intent of achieving both breakthroughs and incremental gains in ways that are relevant for Indian conditions.

IndianOil also plays a major role in boosting the nation's economic development and in stimulating local economies. We are a major employer and help to realize the nation's social and economic equity objectives by supporting the skilling and employment of marginalized sections of the population. We also play a leading role in addressing community needs and social gaps through our many community initiatives in education, healthcare, sports, infrastructure creation to name some. We are equally committed to fostering environmental equilibrium and species preservation and are involved in a variety of ecological support activities – right from mangrove replantation, degraded land afforestation to creating extensive green zones on our facilities that support native plant, animal and marine species. In all these ways, we fulfil our dedication to the UNSDGs – creating enduring impact, building shareholder trust and helping to make our planet a little better. More information on the initiatives can be found in the subsequent sections of this report.

COMPANY VALUES

NATION-FIRST

PROPEL the nation
Contribute to India's growth story. Dedicate time, energy and resources for the nation and fellow citizens.

ON DUTY Always
Be 'On Duty 24X7' with a sense of patriotism and deliver even in difficult circumstances

CARE

DRIVE Business Vision
Build and nurture meaningful connections. Drive IndianOil closer to its vision with a sense of collective purpose and responsibility.

LEAD with Empathy
Put people first in every interaction (internal and external) to understand, prioritize and serve their needs

INNOVATION

SOLVE for Tomorrow
Embrace a future-oriented mindset. Strive for innovative and sustainable solutions for the organization and the planet

RESPOND with Agility
Empower everyone to make prompt decisions. Be nimble in today's dynamic environment.

TRUST

Commit to Deliver
Uphold the IndianOil brand by delivering on promises made. Be reliable by doing the right thing, always

Grow the Ecosystem
Create win-win situations with all stakeholders

PASSION

DARE to be Bold
Step outside of comfort zones. Make informed bets and pursue ambitious endeavours with courage, confidence and conviction

GO the Xtra Mile
Exceed expectations by doing above and beyond the call of duty with perseverance and determination

Chairman's Message

A S Sahney
Chairman, IndianOil

Dear Stakeholders,

It is with immense pride and a deep sense of commitment that I present the 20th edition of IndianOil's Sustainability Report. This report presents our evolution as a catalyst for energy transition and a pioneer in sustainable development, as we fulfil our promise of 'Resilient Growth Responsible Future', powering India's future through inclusive, innovative, and sustainable pathways.
As the trusted energy partner to the world's fastest-growing economy, IndianOil has continued to meet India's rising energy demands while steadily progressing on our green transition journey. The vision of a Viksit Bharat by 2047 positions IndianOil as a key driving force in the nation's progress and we are excited by the scale of change that we can drive. This year we have introduced a transformational project called SPRINT, that is future ready, agile, innovation driven, and powering sustainable energy. The project follows a six-dimensional approach:

- Strengthen Core Businesses
- Propel Cost Optimization
- Reinforce Customer Centricity
- Integrate Technology and Integration
- Nurture Leadership & Talent
- Transition Ready

We recognize the immense responsibility that rests with us in achieving these diverse goals, and the need for always remaining grounded in environmental stewardship.
IndianOil secured its place in Fortune Global 500 at rank 127, topped the DJSI rankings among Indian oil & gas companies, and became the first Indian energy firm in Clarivate's Top 100 Global Innovators 2024. Recognised as India's Most Respected Oil & Gas Company by Business World and the No. 1 Oil & Gas (PSU) brand by Brand Finance for three consecutive years, these accolades reflect our excellence, resilience, and trusted leadership.

Ensuring Energy Security and Scaling for Growth

As the prospect of India becoming a $5 trillion economy by 2029 grows stronger, IndianOil is building capabilities to become a "One-trillion-dollar giant by 2047". Economic growth, increasing urbanization, rising per capita incomes and large-scale infrastructure creation have been propelling India's GDP growth and energy demand. As India's leading energy company, we remain unwavering in our mission to secure the nation's energy future. By 'Strengthening the Core,' we are building the resilience needed for sustained growth today, while responsibly steering India toward a cleaner, more self-reliant tomorrow. Our core businesses remain our foundation, and we are leveraging and optimizing our existing production streams both via the inorganic and organic route. Equally, we are expanding and deepening our presence in a whole host of renewable and alternative energies. This adds great diversity to our product basket and makes us key drivers in building sustainable energy ecosystems that facilitate the nation's shift to clean energy.

Energy Affordability

We are committed to ensuring energy remains accessible and affordable, while driving the transition toward cleaner, sustainable sources. Our focus on cost leadership and efficiency enables us to deliver reliable solutions without cost overruns, strengthening our role in shaping a resilient energy future. Stringent financial discipline helps to strengthen our capital base and our ability to accelerate future expansion. Efficient financial management and judicious reinvestment form the basis of our cost optimization strategy.
In line with our commitment to accelerate the renewable energy transition, our Board has approved the development of 1 GW of renewable capacity through our wholly owned subsidiary, Terra Clean Ltd., with an estimated investment of ₹5,215 crore. We have also secured approvals for inorganic expansion and an additional 4.3 GW of renewable capacity, further strengthening our portfolio and advancing our vision for a cleaner, greener energy future. The ethos of Nation First guides every action we take. Despite a global environment of volatile crude prices, we have steadfastly been the bulwark – ensuring price stability by leveraging our reliable supply chain and our large and distributed refining and marketing operations.

Fueling New Frontiers

Our focus on green energy has seen us evolve from an oil major to a comprehensive energy solutions provider. Our sustainability vision is anchored in achieving operational Net Zero by 2046, and an investment of about Rs 2.5 lakh crore has been envisaged for this purpose. The fund shall be capitalized for diverse emission mitigation and clean energy pathways like green hydrogen, compressed biogas (CBG), renewable energy, energy efficiency and fuel substitution, tree plantation, carbon capture utilization and storage etc.

IndianOil is striving to elevate its refineries of the Solomon Benchmarking Index by driving focused initiatives through dedicated Profitability, Efficiency and Reliability Improvement which resulted in record distillate yield of 80.6% and Fuel & Loss of 8.8%, best in last five years. On the energy conservation front, the Refineries achieved MBN of 68.9, Energy Intensity Index (EII) of 96.4 during the year. During the year, IndianOil's Scope 1 and 2 emissions stand at 22.53 $MtCO_2e$, reflecting a reduction from the previous year. This progress has been enabled by our sustained decarbonisation initiatives, which delivered an emission mitigation of approximately 1.5 $MtCO_2e$.

Accelerating our renewable energy portfolio in the reporting year, 366 GWh was generated from renewable energy projects, resulting in emission mitigation of 0.28 Mt CO2e. Further, 84.5 MW of solar PV projects have been commissioned till date; 35,874 retail outlets have been solarised and generation capacity of 175.7 MW has been achieved. We also joined hands with NTPC Green Energy Private Limited (INGEL)– for inking of a 25-year Power Purchase Agreement (PPA) for provision of 650 MW of Round-The-Clock Renewable Power.

Our sustained push towards cleaner fuels is driving significant progress across ethanol blending and Sustainable Aviation Fuel (SAF) development. We have achieved 19.1 % ethanol blending in petrol in this ESY and are actively supporting the flex-fuel ecosystem through E20 and E100 initiatives. Biodiesel blending also hit a record 0.52%, highest amongst all OMC's reinforcing IndianOil's commitment to cleaner fuel options. Building on this momentum, we have made progress on our plans to set up India's first commercial-scale SAF plant at Panipat through a collaboration with LanzaJet, to bring in the latest technologies. We are also working on a joint venture with Praj Industries that will help us rapidly scale. Our Panipat refinery is setting up a Used Cooking Oil (UCO) based Sustainable Aviation Fuel (SAF) co-processing facility designed to produce 735 KTPA of SAF-blended ATF with a 4% blend. Upon successful implementation, similar facilities will be established at other refineries. These moves add traction to India's target of reaching 1% SAF blending by 2027 and 2% by 2028. In a significant step, IndianOil and Air India signed a MoU for supply of SAF that underlines IndianOil's commitment to promote adoption of low-carbon fuels in aviation.
As a nation, IndianOil is at a cusp of a transformative energy future — one that is cleaner, more inclusive, and rooted in sustainability. IndianOil is at the forefront of this journey through our leadership in the Government of India's SATAT initiative, which turns waste into a valuable energy source while cutting emissions and supporting rural livelihoods.
As of March 31, 2025, we hold 714 active commitments for Compressed Biogas (CBG) production and supply. Landmark achievements include our 100 TPD cattle dung-to-CBG plant in Gwalior, inaugurated by the Hon'ble

Prime Minister, and our 200 TPD Gorakhpur facility, which proudly supplies CBG under our 'IndiGreen' brand. We are also setting up 30 CBG plants through Joint Venture Companies (JVCs). A JVC namely -IOC GPS Renewable Pvt. Ltd. has been formed while other JVs are on the horizon as we prepare for an ambitious scale-up in the coming years.

In a landmark step towards advancing India's clean energy ambition, IndianOil has partnered with L&T Energy Green Tech Ltd. a wholly owned subsidiary of Larsen & Turbo for establishing a 10,000 tonnes per annum green hydrogen generation unit at the Panipat Refinery and Petrochemical Complex - India's largest ever green hydrogen project to date. Scheduled for commissioning by December 2027, the project will replace fossil-derived hydrogen in refinery operations, delivering a significant reduction in carbon emissions. A key milestone in IndianOil's Net Zero journey, advancing India's sustainable energy future through the National Green Hydrogen Mission., which targets producing 5 MMT of hydrogen by 2030. We have made an early start in this area with the launch of 15 green hydrogen-powered buses on use trial basis, in collaboration with Tata Motors in the Delhi NCR and Vadodara region. Alongside production, we are also developing capabilities to transport hydrogen gas through the existing natural gas infrastructure and have partnered with Italy's Snam SpA, to explore viable alternatives. The Dadri-Panipat pipeline has been identified for a pilot project to assess hydrogen readiness.

Our e-mobility infrastructure has seen rapid progress during the year with commissioning of 4,656 EV charging stations, increasing the total to 13,614. Additionally, 37 battery swapping stations were launched in the current financial year with services available at 99 fuel stations reinforcing IndianOil's leadership in low-carbon transport solutions. Through Indo Fast Swap Energy, our joint venture entity with Sun Mobility, Singapore, we are gearing up to establish one of the largest battery-swapping networks in India.

Leveraging Innovation to Build Competitive Advantage
Innovation at IndianOil is grassroots-led, customer-focused and benefit driven. IndianOil's customers are extremely diverse, straddling across commercial, industrial, residential and the government. Further, our clean energy initiatives are driven forward by process- and product-led innovation. Our 60-acre New Energy Campus, at Faridabad, Haryana which is being set up with an investment of ₹3200+ crore, will serve as a hub for R&D in emerging technologies like battery swapping, green hydrogen mobility, energy storage, and SAF, helping us accelerate on the green transition journey. In FY24-25, IndianOil was granted 129 new patents, with 73 new filings, taking the effective patent portfolio to 1,689 and the cumulative filings to 1,809, a testament to the depth and relevance of our innovation.

In our pursuit of a low-carbon future, we are harnessing Carbon Capture, Utilisation, and Storage (CCUS) technologies as a powerful enabler of sustainability. Our R&D efforts span chemical, biochemical, and electro bio-catalytic CO_2 capture methods, including our breakthrough eCO_2Sorb technology, which captures up to 96% of CO_2 while reducing energy use. In collaboration with Oil India Limited, we will deploy CCUS at our Digboi Refinery to capture CO_2 from flue gas stacks for Enhanced Oil Recovery, turning emissions into a resource. This initiative reflects IndianOil's belief that innovation and collaboration are key to reducing our carbon footprint while driving sustainable economic growth.

This year, we launched Chotu Master, a specialized cooktop for our lightweight cylinders — Munna and Chotu. We also introduced several eco-friendly innovations, including "PropanePlus", a lower-carbon propane; "XtraBoost AutoGas", offering 3% better fuel economy; "High Speed Diesel B1", with 1% biodiesel in line with the National Policy on Biofuels; and "Sulphur Bentonite", a specialty fertilizer that enhances plant health and soil quality.

People, Partnerships, and Purpose
At the heart of IndianOil's journey are our people—our workforce, channel partners, LPG distributors, and customer attendants. We are nurturing a culture of safety, inclusion, and upskilling, ensuring that our people remain our strongest competitive advantage.

A very strong safety culture is central to the vision of IndianOil as it assures the proper functioning and optimization of our manufacturing facilities while ensuring that our people remain healthy, safe and productive. This needs to be countered with a meticulous and uncompromising adherence to Standard Operating Procedures and Safety Maintenance Practices as well as a detailed review of our site-specific Process Safety Management elements, followed by curative measures. All this has been initiated at affected sites, and we are confident of emerging with a stronger culture of awareness, discipline and accountability in place. The company is also working to integrate a variety of technology tools like robotics, predictive maintenance, increased automation and AR/VR based training to fortify our overall safety infrastructure.

At IndianOil, we believe that empowering women is integral to driving innovation, inclusivity and sustainable growth. We foster an inclusive workplace with equal opportunities, skill development, leadership pathways, and work-life balance. In 2024-25 women comprised of 15.65% of our new hires and 25% of our board of directors, reinforcing our commitment to a diverse and equitable workforce that drives sustainable progress.

During the year, a joint initiative of corporate HRD and IndianOil Institute of Petroleum Management, Aarohi 7.0 was rolled out to groom high-potential women officers in middle management for future leadership roles. We also celebrated the outstanding contributions of 950 women customer attendants servicing 170 of our pan-India service stations which highlights that fact that their contributions are valued by the enterprise. These achievements reaffirm that every role, every voice, and every contribution matter in building the IndianOil of tomorrow.

Sustainability with a Soul
Our social initiatives embody our values of compassion and Nation-first thinking. Through programmes like Parivartan: Prison to Pride and Nayi Disha: Smile for Juvenile, we are empowering 10,000+ inmates and children across 29 states/UTs through nine sports, driving rehabilitation with skill and dignity. Recognised with the Sportstar Aces Chairperson Award, the Asia-Pacific Stevie Award, and the Chess for Freedom Award, these initiatives proved their global impact when the FIDE Chess team clinched gold and bronze — a testament to IndianOil's leadership in using sports to transform lives. IndianOil is also working with the State Prison Departments to run its Umeed - A Hope Retail Outlets (ROs) programme wherein former and current prison inmates are trained to deliver services. Currently, 63 such ROs are operational.

Further, our support for para-athletes at the Paris Paralympics 2024 and over 300 budding and elite sports talents is contributing to the growth of a sports-driven nation. Sheetal Devi's sterling performance at the Paris Paralympics 2024 has once again proved the mettle of our para-athletes, who bring complete focus and dedication to their goal. We continue to offer 100 scholarships to aspiring para-athletes in 16 sports, under our Divyashakti Para-Sports Scholarships scheme. Of these, 50% are reserved for females.

Restore, Preserve, Protect
As a resource-based industry, IndianOil has always prioritized environmental stewardship recognizing the responsibility that we carry for protecting the planet and its delicate balance between the elements and species.

Our biodiversity projects continue to safeguard India's iconic species wealth, like project cheetah - a pioneering project aimed at reintroducing cheetahs to Indian soil, Rhino Adoption- to protect the majestic Indian single-horned rhino, Tiger conservation - the conservation efforts in the Sundarban Tiger reserve, Elephant Rehabilitation - care to rescued elephants and Turtle's protection - protection of Olive Ridley turtles. Such efforts show our resolve to restore and protect ecosystems for future generations.
Every Sapling we plant is a step towards greener tomorrow. Through large-scale tree plantation drives across our operational areas, we are enhancing green covers and nurturing our natural ecosystem. Our commitment to a greener planet is reflected in our extensive afforestation efforts. In FY 2024–25 alone, IndianOil planted more than 62 lakh trees within and beyond our operational boundaries, mitigating 0.124 $MtCO_2e$ emissions. Over the years, these initiatives have transformed our facilities into verdant enclaves that nurture native species, provide shelter to diverse birds, animals, and marine lives, and help propagate biodiversity.

As part of our journey towards achieving our Net Zero 2046 target, IndianOil is leveraging Nature-based Solutions to address hard-to-abate operational emissions. Under the Government of India's Green Credits Programme (GCP) of the MoEFCC, we have embarked on large-scale eco-restoration and tree plantation on degraded forest land, in collaboration with State Forest Departments and the Indian Council of Forestry Research and Education (ICFRE) as the programme administrator. In FY 2024–25, we committed ₹56 crore for 21 plantation blocks covering 1,077 hectares across four states. This initiative underscores our belief that restoring ecosystems is as vital as reducing emissions, enabling us to create lasting environmental value while contributing to India's climate goals.

The Mangrove 2.0 plantation initiative underway at the Haldia refinery demonstrates this eloquently. To protect these vulnerable coastal ecosystems and communities, IndianOil is undertaking mangrove plantation at Beliari Char and Dakshinchar, two remote islands at the confluence of the Hooghly and Rupnarayan rivers. These mangroves act as natural barriers against storm surges, curb soil erosion, and strengthen climate resilience while nurturing biodiversity. This is India's largest mangrove plantation drive, spanning across 150 hectares, with the aim of planting three million mangrove trees.

IndianOil's unwavering commitment to greening India is embodied by our eco-park initiatives. Nine of our refineries have expansive eco-parks. They are also home to a wide variety of land and marine-based plants, animals, birds, fishes, and other species. Many of these eco-parks also have additional nature-promoting facilities like storm water ponds, composters too, nurturing a positive cycle of habitat and ecosystem preservation.

The importance of waste management within the refinery context cannot be highlighted enough. At our Gujarat refinery we are pioneering in-situ sustainable waste management for legacy sludge disposal through bioremediation. The bacteria used for this bioremediation process has been developed in-house and it consumes a variety of noxious pollutants like oil, petroleum hydrocarbons and converts them into harmless byproducts. The method is cost-effective, sustainable, scalable and applicable for a lot of industries, once again highlighting the use and importance of R&D in solving unique problems.

IndianOil's waste management efforts are driven by innovation and a strong commitment to the circular economy. Our 'Unbottled' initiative repurposes PET bottles into sustainable apparel, reducing plastic waste, CO_2 emissions, and conserving energy. We also launched our recycled polymer brand 'Cycloplast', achieving a key milestone with the approval of its r-HDPE RBHD015 black grade, now used at a 30% blend in SERVO Gas Engine Oil containers. Cycloplast recorded its best-ever annual sales of 220 MT, reinforcing our focus on sustainable packaging. Further, we are collaborating with State Agriculture Universities in Punjab, Raipur, Himachal Pradesh, and Madhya Pradesh to conduct multi-location field trials of Fermented Organic Manure, validating its role in improving crop yields, enhancing soil health, and promoting sustainable agriculture.

Across our refineries and facilities, we are maximising treated wastewater reuse through advanced treatment technologies, reducing freshwater dependency and safeguarding local water resources. Through consistent efforts our refineries now use 80-95% of wastewater significantly easing the demand for freshwater. These efforts reflect our commitment to circular water use and environmental stewardship.

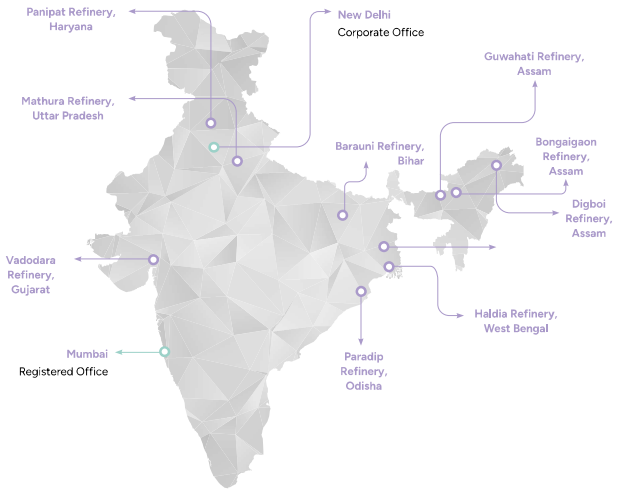
Transition Ready IndianOil
As we navigate a world marked by energy transition, digital disruption, and geopolitical complexity, IndianOil remains anchored in its purpose. We are fully aligned with India's vision of energy independence, Net Zero, and Viksit Bharat. Our strategy embraces both global trends and local aspirations—balancing resilience, sustainability, and inclusive growth.

As the nation's trusted energy partner, we take pride in empowering people's dreams and ambitions, fuelling countless journeys of progress along the way. Our successful implementation of the Pradhan Mantri Ujjwala Yojana (PMUY) has been instrumental in more than one crore consumers getting free cooking gas connections for their households – an immense enabler towards women's independence, health and hygiene. A developed and equitable nation will be a boon and a fillip for each one of us and IndianOil is putting its strongest energies and intellect forward to turn this vision into reality.

We will continue to challenge conventions, accelerate the shift to a low-carbon and digital future, and embed ESG excellence into every decision we make. With our stakeholders by our side, we are shaping a resilient, inclusive, and sustainable energy landscape that will define the nation's progress for decades to come.

I would also like to express my sincere appreciation to the Ministry of Petroleum and Natural Gas, Central and State Governments, our valuable customers, investors, business collaborators, and every stakeholder whose trust and support has aggregated towards our success. IndianOil is not just fueling vehicles—we are fueling dreams, ambitions, and India's transformation. Together, with passion in our hearts and purpose in our stride, we will continue to energize a billion lives.

Geographical Presence



09 Refineries

127 Terminals/ depots

11 Lube-blending plants

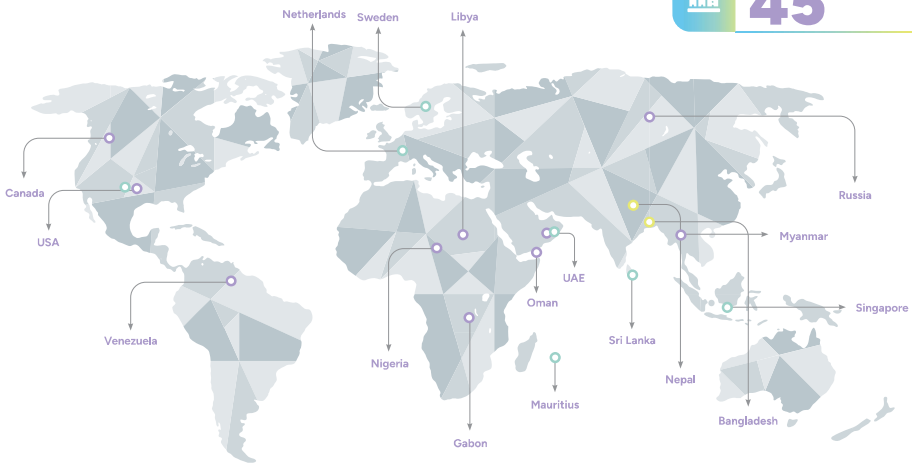
03 Petrochemical plants

103 LPG Bottling Plants

Global Markets served

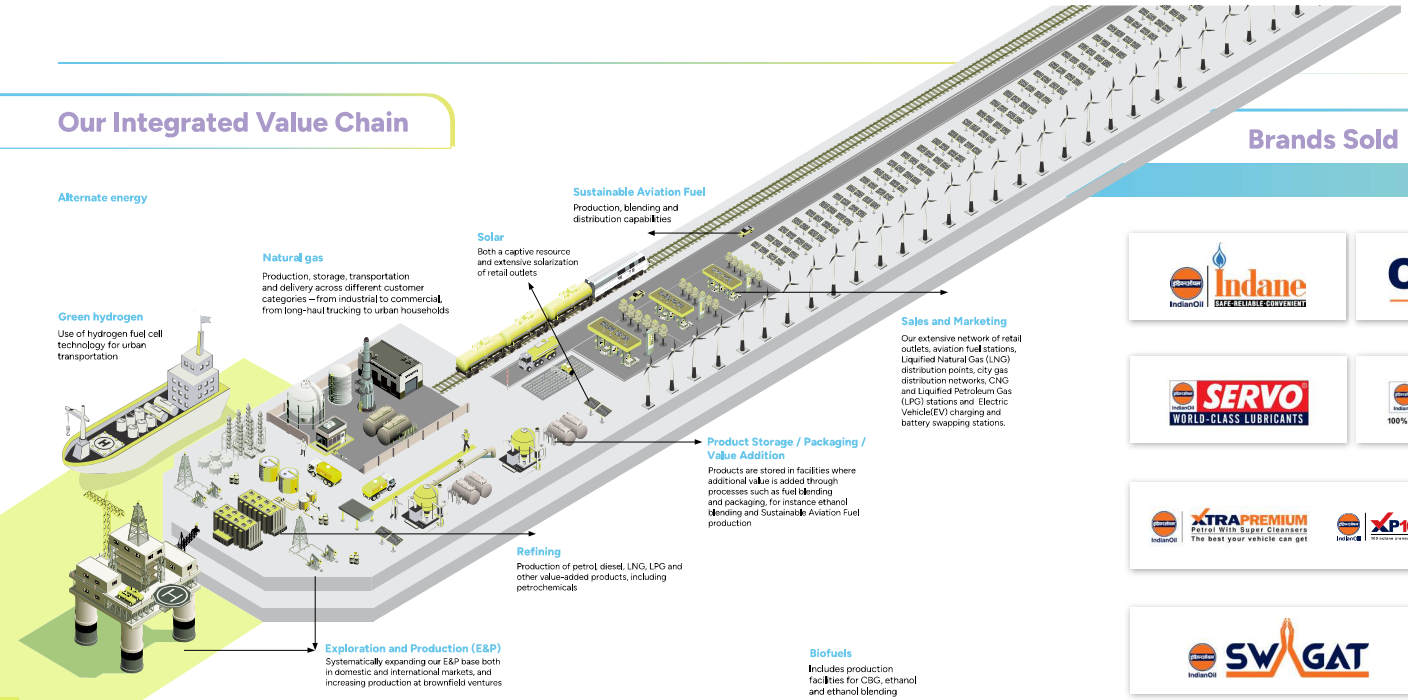
Total markets served

45



E&P assets | Branches / representative offices | Overseas subsidiaries

Our Integrated Value Chain



Alternate energy

Green hydrogen
Use of hydrogen fuel cell technology for urban transportation

Natural gas
Production, storage, transportation and delivery across different customer categories – from industrial to commercial, from long-haul trucking to urban households

Solar
Both a captive resource and extensive solarization of retail outlets

Sustainable Aviation Fuel
Production, blending and distribution capabilities

Sales and Marketing
Our extensive network of retail outlets, aviation fuel stations, Liquified Natural Gas (LNG) distribution points, city gas distribution networks, CNG and Liquified Petroleum Gas (LPG) stations and Electric Vehicle(EV) charging and battery swapping stations.

Product Storage / Packaging / Value Addition
Products are stored in facilities where additional value is added through processes such as fuel blending and packaging, for instance ethanol blending and Sustainable Aviation Fuel production

Refining
Production of petrol, diesel, LNG, LPG and other value-added products, including petrochemicals

Exploration and Production (E&P)
Systematically expanding our E&P base both in domestic and international markets, and increasing production at brownfield ventures

Biofuels
Includes production facilities for CBG, ethanol and ethanol blending

Brands Sold

Fuelling India with trusted brands, powering every journey

Indane – SAFE. RELIABLE. CONVENIENT
Chhotu from Indane

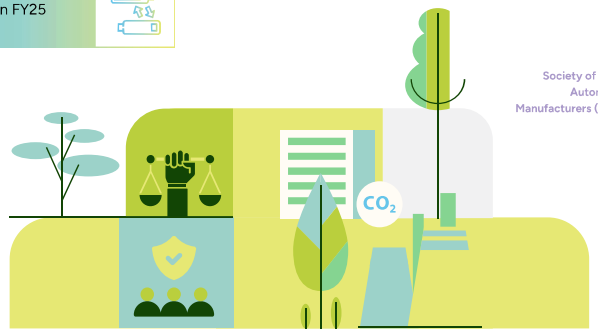
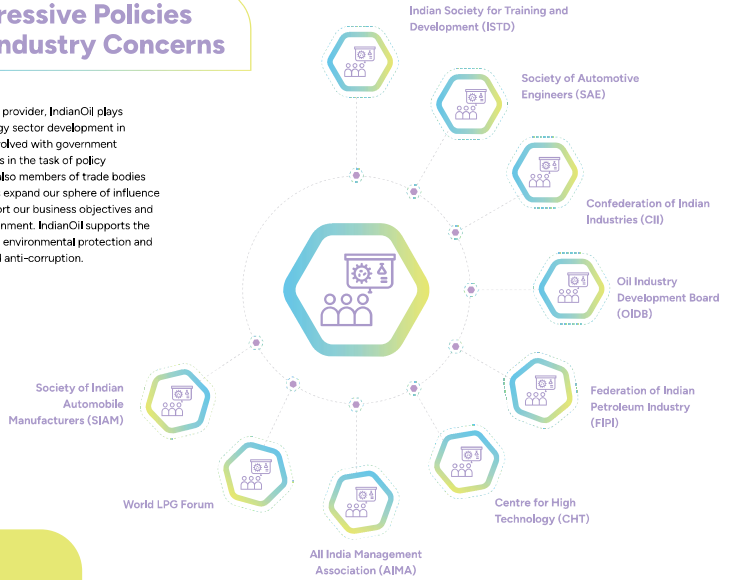
5,940 Consumer pumps

15.64 Crore Active LPG Customers



Influencing Progressive Policies and Amplifying Industry Concerns

As the nation's foremost integrated energy provider, IndianOil plays an active role in guiding the country's energy sector development in a positive and constructive way. We are involved with government committees and other governmental bodies in the task of policy discussions, review and advocacy. We are also members of trade bodies and industry associations, and this helps us expand our sphere of influence and better advocate for policies that support our business objectives and contribute to a favourable operating environment. IndianOil supports the principles of human rights, labor standards, environmental protection and species conservation, economic equity and anti-corruption.



Our Approach to Sustainability

At IndianOil, sustainability forms the cornerstone of our long-term business vision. We view our role not merely as an energy provider but as a catalyst for positive change that advances national priorities and global sustainability goals. Our strategy is designed to integrate environmental responsibility, social equity, and economic resilience into every aspect of our operations, ensuring that growth remains inclusive and future-ready.

We are driving this agenda by investing in cleaner energy solutions, embracing innovation, and embedding ethical practices across the value chain. Reducing emissions, improving resource efficiency, and accelerating the adoption of low-carbon technologies remain central to our climate action pathway. At the same time, we are committed to strengthening relationships with our stakeholders—employees, customers, partners, and communities—by delivering long-term value and fostering trust.

By embedding sustainability into the core of our operations, we aspire to leave a lasting impact that strengthens both environmental and societal well-being. Our focus is on building solutions that not only address present challenges but also lay the foundation for a balanced and responsible future. We believe that collective action is key to driving meaningful change. Through collaboration, innovation, and a steadfast commitment to responsible growth, we aim to shape an energy ecosystem that supports prosperity today while safeguarding the interests of generations to come.

Vision

IndianOil envisions delivering energy solutions that are reliable, safe, and responsible. Our approach is guided by efficiency and ethics, ensuring that we reduce environmental impact while contributing to healthier communities. Through this, we aim to create lasting value and sustain a business that supports both people and the planet

Mission

- Meet stakeholders' aspirations for value creation Ensure a safe and healthy working environment.
- Incorporate environmental and social considerations in business decisions.
- Build a reputation as a responsible corporate citizen.
- Conduct business with ethics and transparency

Sustainability Priorities

IndianOil's priorities serve as the foundation for embedding sustainability across its operations. They shape the company's commitments and provide direction in formulating policies and initiatives that drive responsible growth

Internal policies and process

The company's mission and priorities are embedded in everyday operations through a comprehensive framework of policies and practices

Stakeholder engagement

Our stakeholders—employees, customers, partners, communities, media, and the wider public—are vital to our success. Regular, meaningful engagement with them underpins our ethical business approach, helping us refine our processes, culture, and strategies to better meet their needs and expectations.

We regularly engage with our different stakeholder groups to ascertain their opinions and capture their concerns and grievances. Maintaining positive relations with our local communities is of critical importance for us as this ensures smoother operations and symbiotic associations that foster trust and safeguard our social licence to operate. We regularly conduct impact assessments around the locality before we conduct CSR projects. For both greenfield and brownfield projects, Impact Assessments are done in cases of land acquisition, with issues and concerns voiced by local communities being recorded and actively incorporated in designing solutions. At both the project implementation and post-implementation phases such stakeholder inputs are integrated. We routinely conduct capacity-building and village awareness programmes for the local community, aimed at enhancing understanding of the company and facilitating grievance redressal. Methods of engagement include need assessment surveys, CSR activities and community grievance redressal forums and all such platforms are regularly used to monitor both emerging concerns and track grievance resolution. Further, given our strong commitment to spurring economic development in the country, we also identify marginalized groups within local communities and work towards their development both through our CSR initiatives and as a part of our operations. Additionally, double materiality assessments using surveys from local communities help us identify emerging risks and concerns. Stakeholder engagement programmes are implemented across all local operations. We encourage sourcing from Micro, Small and Medium Enterprises (MSMEs), women, Scheduled Caste/Scheduled Tribe (SC/ST) groups and vendors with disabilities. This not only promotes inclusivity and equitable income distribution, which also helps us avoid operational hurdles and lowers our procurement and logistical costs.

Our Stakeholders Relationship Committee addresses shareholder and investor grievances and oversees general meetings. All grievances and concerns flagged off by our stakeholders are taken very seriously. We have an internal software portal for tracking the status of grievances, allowing lodgement and monitoring of timelines for their resolution. Grievances related to corporate matters and dispute settlement go for Board consideration via the Board Committees that oversee aspects like business risk, CSR and sustainability. Despite being a large company that runs complex operations, IndianOil has always made conscious efforts to remain accessible to all our stakeholder groups, as we staunchly believe that doing so makes our growth both grounded and sustainable. We are integrating technology into our stakeholder engagement mechanisms to enable greater speed, accuracy and faster resolution and we are confident this will only strengthen our foundation.

Stakeholder Engagement Process

Step 1

Identify and understand the primary stakeholder groups whose actions and decisions significantly affect the operations and success of our business

Step 2

Prioritize stakeholders by evaluating both their level of influence and impact on our operations, as well as the effect our business has on them

Step 3

Utilize a range of engagement techniques to assess stakeholder concerns and actively gather their feedback

Step 4

Gather and analyze feedback, then incorporate the insights into our strategic planning and decision-making processes

Step 5

Implement appropriate measures to address stakeholder concerns and regularly communicate our progress and performance through annual Sustainability Reports and other communication channels.

Robust Engagement with Stakeholders

Government

Engagement Topics	Engagement Channels	Frequency of Communication	Value Delivered

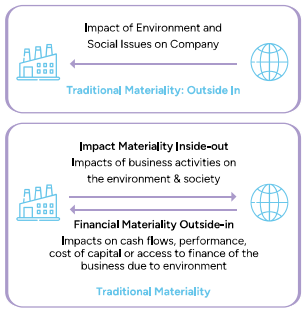
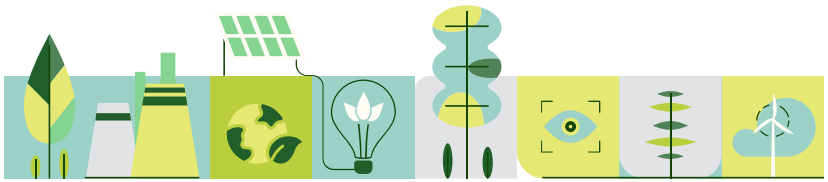
Materiality Assessment

IndianOil recognizes and addresses material issues relevant to our business that require stakeholder attention to ensure long-term success as a responsible and sustainable enterprise. Our material issues are shaped by the economic, social, and environmental contexts in which we operate. This year, we conducted a materiality assessment, continuing the process initiated last year, to identify and address the key issues relevant to our business. The materiality assessment is systematically integrated within our company's Enterprise Risk Management (ERM) framework. We actively involve our internal and external stakeholders in the process of identifying material issues to ensure diverse perspectives and priorities are considered.

Our Approach to Double Materiality Assessment

At IndianOil, sustainability is a core part of our long-term vision, steering our efforts to develop resilient, future-ready businesses and communities. We believe that the true value of a materiality assessment lies in its ability to actively inform and guide business decisions, ensuring alignment between sustainability priorities and long-term strategic goals. As a demonstration of this commitment, we conducted our first Double Materiality Assessment (DMA) to enhance our sustainability strategy by pinpointing critical impacts, risks, and opportunities, while better aligning with changing stakeholder expectations. Our methodology was guided by prominent sustainability standards and frameworks such as Sustainability Accounting Standards Board (SASB) and Global Reporting Initiative (GRI), alongside insights from peer disclosures and industry best practices, ensuring a comprehensive and impactful result. Double materiality encompasses two key aspects: the effects our business activities have on society and the environment (impact materiality), and how sustainability-related factors influence our financial performance (financial materiality). This assessment has enhanced our understanding of both how we impact—and are impacted by—the wider sustainability context. The insights obtained will guide us in embedding stakeholder expectations into our strategy and focusing on actions that generate significant, lasting value.





Double Materiality Assessment Process

IndianOil's Double Materiality Assessment was carried out through a structured six-phase process to identify and assess the key ESG issues relevant to both the company and its stakeholders, as outlined below:

Step 1

Identification of Sustainability matters

We identified a wide array of sustainability topics relevant to our operations and strategy by reviewing industry guidelines, regulatory changes, global sustainability challenges, and consulting various sources including our previous materiality assessment, peer reports, and key ESG standards and frameworks such as SASB, GRI-11, DJSI, and MSCI. As a result we streamlined our list to 17 final material issues classified under environment, social and governance.

Step 2

Identification of Stakeholders

We mapped and prioritized key internal and external stakeholders who are impacted by or can influence our business and sustainability performance. This included employees, customers, investors, regulators, communities, and industry partners. Engaging these stakeholders ensures diverse perspectives are considered in assessing material ESG issues.

Step 3

Stakeholder engagement plan & Consultation

To capture diverse perspectives and guide our understanding of what matters most, we engaged with internal and external stakeholders through surveys and consultations. Employees contributed via surveys and focus groups, customers shared environmental and social priorities, investors provided insights on impacts, risks, and opportunities, while partners, local communities, and industry experts supported us in assessing broader sustainability trends.

Step 4

Establishing scoring criteria

We developed a structured scoring methodology tailored to IndianOil's business model that evaluates each topic by combining impact severity and likelihood for impact materiality, and magnitude and likelihood for financial materiality. This approach, informed by stakeholder inputs, enables us to effectively prioritize our sustainability efforts.

Step 5

Assess impact and financial materiality

Each topic was evaluated for financial materiality its potential impact on IndianOil's financial performance and impact materiality how our activities may affect the environment and society. Based on the established scoring criteria, we calculated material topic scores for both impact and financial materiality. This dual approach allowed us to consider the risks and opportunities shaping our future sustainability strategy.

Step 6

Develop Double materiality matrix

The insights gathered from our assessments were consolidated into a double materiality matrix, visually representing the significance of each issue by prioritizing topics based on their potential impact on IndianOil's financial performance and their broader effects on society and the environment. In consultation with the client, we prepared the final list of sustainability matters with corresponding impact and financial materiality scores to develop the final matrix.

Double Materiality Matrix

		Financial Materiality	Impact Materiality
Environment	Green House Gas (GHG)	●●○	●●●
	Water Stewardship	●○○	●●○
	Air Emissions	●○○	●○○
	Circularity Principle	●○○	●○○

Most Material ●●●

Based on Financial and Impact Materiality, GHG, Business Ethics & Accountability, Supply Chain Management and Product Stewardship and Customer satisfaction as the most critical issues and emerging risks for IndianOil and its stakeholders. Detailed insights into these topics are provided in sections of this report.

Our Very High priority Topics

Topic	Description	Risk/Opportunity	Mitigation Measures
Green House Gas (GHG)	Greenhouse gas (GHG) emissions in the oil and gas industry primarily result from the extraction, refining, and combustion of fossil fuels. Accurate accounting of greenhouse gas (GHG) emissions is essential for identifying key sources, developing effective reduction strategies and ensuring regulatory compliances. By implementing robust GHG accounting practices, we are enhancing our capabilities to mitigate environmental impact. As a leading oil and gas company, IndianOil plays a significant role in managing these emissions to balance energy demands with environmental responsibility.	Risks: Rising regulatory pressure and carbon pricing can increase operational costs and impact profitability. Failure to reduce emissions could also damage brand reputation and investor confidence.	
Opportunities: Investing in cleaner technologies and renewable energy enables cost savings, access to carbon markets, and alignment with India's net-zero goals, enhancing competitiveness and stakeholder trust.	IndianOil is committed to achieving net-zero operational emissions (Scope 1 & 2) by 2046, with an estimated investment exceeding ₹2.4 lakh crore. Strategies include enhancing energy efficiency, electrification, fuel replacement, and adopting renewable energy sources like wind and solar. The company is also exploring green hydrogen, compressed biogas, and carbon capture, utilization, and storage (CCUS) technologies to further reduce emissions		
Water Stewardship	Water stewardship in the oil & gas industry involves responsible management of water resources throughout exploration, production, and refining processes. IndianOil commits to optimizing water use, minimizing discharge, and ensuring treatment of wastewater to protect local ecosystems and support community water needs sustainably.	Risks: Water scarcity and stringent discharge regulations could disrupt operations and increase compliance costs, especially in water-stressed regions.	
Opportunities: Efficient water recycling and treatment systems can reduce consumption and waste, lower operational risks, and improve community relations and regulatory compliance.	IndianOil has implemented comprehensive water management strategies across its operations. These include rainwater harvesting systems, effluent treatment plants, and the adoption of water-efficient technologies. The company aims to achieve zero liquid discharge from its operations and has conducted water consumption studies to identify and implement water-saving initiatives.		

Topic	Description	Risk/Opportunity	Mitigation Measures
Climate Adaptation, Resilience, and Transition	Climate Adaptation, Resilience, and Transition involves preparing IndianOil's operations to manage and mitigate the risks posed by climate change. This includes strengthening infrastructure to withstand extreme weather events and other climate impacts. Simultaneously, IndianOil is driving a strategic shift towards cleaner energy solutions and low-carbon technologies, supporting a sustainable and resilient energy future.	Risks: Extreme weather events and transition risks from shifting to low-carbon energy sources may disrupt supply chains and infrastructure.	
Opportunities: Proactively building climate resilience and adopting low-carbon technologies ensures long-term business continuity and opens new markets for sustainable products.	To enhance climate resilience, IndianOil is integrating climate risk assessments into its planning processes. The company is investing in infrastructure upgrades to withstand extreme weather events and is diversifying its energy portfolio to include renewable sources. Additionally, IndianOil is engaging with stakeholders to align its operations with national climate goals and to promote sustainable practices across its value chain.		
Health & Safety	Health & Safety is critical due to the inherent operational risks and complex processes involved. For IndianOil, this means ensuring the well-being of its workforce and communities by managing hazards unique to refining, transportation, and distribution, where safety is integral to sustainable and reliable energy delivery. Strong health and safety practices enable IndianOil to maintain operational continuity while protecting lives and the environment.	Risks: Industrial accidents and health hazards can lead to operational downtime, legal liabilities, and loss of workforce morale.	
Opportunities: Strong safety cultures and preventive measures reduce incidents, enhance employee productivity, and improve company reputation among stakeholders.	IndianOil has established a robust Health, Safety, and Environment (HSE) management system, accredited under OHSAS-18001 and rated under the International Safety Rating System (ISRS). The company conducts regular safety audits, health check-up camps, and training programs to ensure the well-being of its employees and contractors. Additionally, IndianOil promotes a safety-first culture through initiatives like the 'SAMANVAYA' meet and the 'Smriti Sthal' tribute.		
Asset Integrity and Process Safety	Asset Integrity and Process Safety are fundamental in the oil & gas sector to prevent failures, leaks, and accidents in complex infrastructure and operations. At IndianOil, maintaining the reliability and safety of pipelines, refineries, and storage facilities ensures uninterrupted energy supply and environmental protection. Robust integrity management supports operational excellence and minimizes risks to people and assets.	Risks: Equipment failures or process safety incidents can cause costly shutdowns, environmental damage, and safety breaches.	

Topic	Description	Risk/Opportunity	Mitigation Measures
Opportunities: Rigorous maintenance and risk management extend asset life, reduce unplanned downtime, and ensure compliance with safety regulations.	IndianOil employs advanced monitoring systems and conducts regular maintenance to ensure the integrity of its assets. The company has implemented process safety management protocols to identify and mitigate risks associated with its operations. Training programs and emergency response drills are conducted to prepare employees for potential incidents and to minimize their impact.		
Business Ethics and Accountability	Business ethics and accountability strongly emphasize transparent, fair, and responsible conduct across all operations. Upholding strong governance, anti-corruption measures, and stakeholder engagement fosters trust and long-term sustainability. At IndianOil, embedding ethics and accountability ensures compliance, enhances reputation, and supports sustainable business growth.	Risks: Non-compliance with ethical standards risks legal penalties, reputational harm, and loss of stakeholder trust.	
Opportunities: Transparent governance and strong ethics frameworks enhance investor confidence, foster partnerships, and support sustainable growth.	IndianOil upholds high standards of corporate governance and ethical conduct. The company has established a Code of Conduct and a Whistleblower Policy to promote transparency and accountability. Regular audits and compliance checks are conducted to ensure adherence to legal and ethical standards.		
Supply Chain Management	Supply Chain Management in the oil & gas industry is crucial for ensuring timely and efficient delivery of raw materials, products, and services across complex networks. IndianOil, optimizes supply chain supports operational efficiency, cost-effectiveness, and energy security. Effective supply chain management enables resilience against disruptions and strengthens the company's ability to meet growing energy demands.	Risks: Supply chain disruptions and non-compliance by suppliers on ESG standards can affect production and reputation.	
Opportunities: Strengthening supplier ESG performance improves risk management, operational resilience, and meets growing customer expectations for responsible sourcing.	IndianOil works closely with its suppliers to ensure compliance with environmental and social standards. The company conducts supplier audits and assessments to identify and mitigate risks within its supply chain. Capacity-building initiatives are implemented to promote sustainable practices among suppliers and to enhance supply chain resilience.		

Topic	Description	Risk/Opportunity	Mitigation Measures
Grievance Redressal	Grievance redressal mechanisms ensure that employees, suppliers, and stakeholders have a clear, accessible process to report concerns or violations related to workplace conditions, ethics, or environmental practices. Timely and transparent resolution of grievances helps build trust, improve compliance, and foster a positive work environment. IndianOil has an effective grievance redressal system supports accountability and continuous improvement.	Risks: Ineffective grievance mechanisms can lead to unresolved conflicts, employee dissatisfaction, and negative publicity.	
Opportunities: Efficient grievance redressal builds trust, enhances workplace relations, and demonstrates commitment to accountability and continuous improvement.	IndianOil has established grievance redressal mechanisms to address concerns raised by employees, contractors, and communities. The company ensures that grievances are investigated promptly and resolved effectively. Feedback from these mechanisms is used to improve policies and practices, fostering a culture of trust and accountability		
Product Stewardship and Customer Satisfaction	Product Stewardship and Customer Satisfaction are closely linked in the oil & gas sector, focusing on delivering safe, high-quality products while meeting consumer expectations. IndianOil ensures responsible management of its products throughout their lifecycle, minimizing environmental and health impacts. By prioritizing customer needs and reliable service, IndianOil strengthens trust and drives sustainable growth.	Risks: Failure to meet quality or safety expectations may lead to customer attrition and regulatory scrutiny.	
Opportunities: Emphasizing product lifecycle management and customer feedback drives innovation, brand loyalty, and market differentiation.	IndianOil is committed to delivering high-quality products that meet customer expectations and regulatory standards. The company invests in research and development to innovate and improve product offerings. Customer feedback is actively sought and used to enhance product quality and service delivery.		

A year at Glance

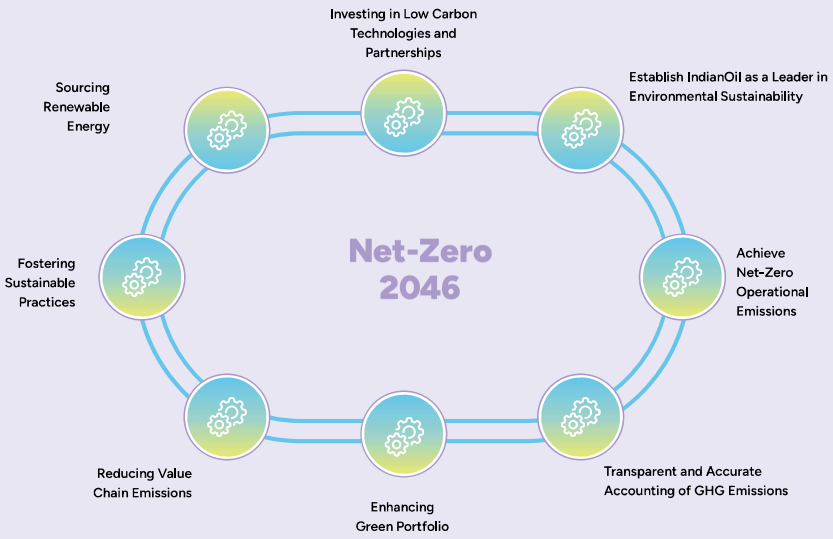


Mapping with United Nations Sustainable Development Goals (UN SDGs)

At IndianOil, sustainability is at the core of our business strategy, and our actions are closely aligned with the United Nations Sustainable Development Goals (UNSDGs). We view the SDGs as a framework that enables us to balance energy security with environmental stewardship and inclusive socio-economic growth. Beyond compliance, our initiatives generate wider impacts such as job creation, community upliftment, and equitable access to clean energy, thereby contributing to India's progress while supporting global sustainability priorities.

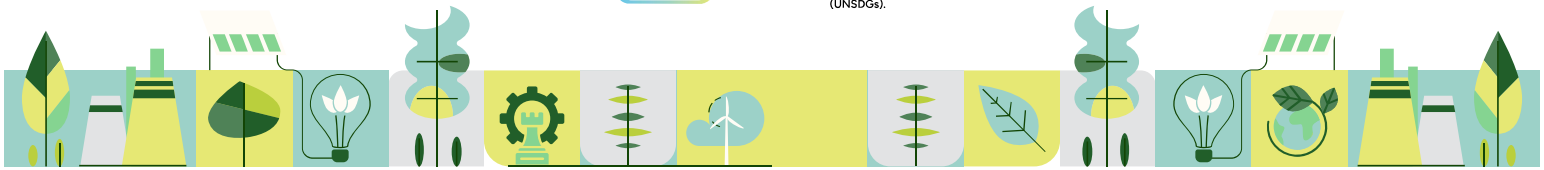
Our approach to the UNSDGs is not only limited to individual projects but is embedded into the way we innovate, invest, and operate. IndianOil prioritise long-term resilience by integrating climate considerations into its business model, encouraging adoption of cleaner technologies, and building capacity across the value chain to transition towards a low-carbon economy. At the same time, we recognise that sustainable growth requires inclusive development hence, our focus extends to empowering communities, enhancing workforce capabilities, and forging partnerships that amplify impact. This integrated approach ensures that IndianOil's contributions go beyond immediate outcomes, creating systemic change that supports national and global goals.

In alignment with India's commitments to the Paris Climate Agreement, IndianOil is actively reducing its emission intensity, scaling up non-fossil energy capacity, and enhancing carbon sinks through afforestation. We are modernising refineries, expanding the use of natural gas, accelerating renewable energy adoption, and improving energy efficiency to lower carbon intensity across operations. At the same time, we are driving the transition to cleaner fuels by promoting biofuel blending, expanding LPG and natural gas accessibility, and enabling electric mobility. With a steadfast commitment to innovation, resilience, and inclusive growth, IndianOil continues to strengthen its contribution to the UNSDGs while shaping a sustainable energy future for the nation.

Pillar of Sustainability Strategy

Sustainability Pillars	Our Contribution to the SDGs	Material Topics
Empowered Leadership and Transparent Governance forms the foundation of IndianOil's sustainability framework, ensuring that strategic decisions are guided by integrity, accountability, and long-term stakeholder value. Through a robust governance structure with Board-level oversight on sustainability, comprehensive risk management frameworks, adherence to global ESG reporting standards, policies on ethics, compliance, and stakeholder engagement, we foster trust and transparency across its operations. By embedding sustainability considerations into governance and leadership practices, the Corporation is building resilience, strengthening stakeholder confidence, and steering the organisation towards responsible growth.	• Business Ethics and Accountability • Human Rights	• Asset Integrity and process safety • Business ethics and accountability • Anti-corruption • Supply chain management • Data integrity and cybersecurity • Grievance redressal • Product stewardship and customer satisfaction

Sustainability Pillars	Our Contribution to the SDGs	Material Topics
Environmental Stewardship constitutes a central pillar of IndianOil's sustainability framework, underscoring its commitment to advancing India's energy needs in a responsible and environmentally conscious manner. Pursuing a broad spectrum of initiatives that integrate climate action with business strategy, these efforts encompass decarbonisation, expansion of renewable energy, promotion of sustainable fuels, enhanced water and waste management practices, and conservation of biodiversity. Through these measures, IndianOil seeks to foster long-term ecological resilience while contributing meaningfully to national and global sustainability goals.	• Sustainability strategy • Energy management and reduction planning • Biodiversity conservation • Circular economy • Water stewardship	• GHG • Air emissions • Water stewardship • Circularity principle • Climate adaptation, resilience and transition • Environmental impact



Sustainability Pillars	Our Contribution to the SDGs	Material Topics
Strengthening the Value Chain represents IndianOil's commitment to integrating sustainability principles across its business ecosystem, ensuring that environmental and social considerations are embedded at every stage of operations and its value chain. Emphasis is placed on expanding low-carbon product offerings, enabling green mobility solutions, fostering circular economy practices, and collaborating with partners to reduce environmental impacts. By reinforcing the sustainability of its value chain, IndianOil is enhancing long-term business continuity while contributing to India's broader energy transition.	• Product stewardship • Responsible supply chain management • R&D innovation	• Supply chain management • Product stewardship and customer satisfaction

Sustainability Pillars	Our Contribution to the SDGs	Material Topics
Creating **Shared Value for Our People** focuses on fostering an inclusive, safe, and progressive environment for its employees, partners, and the communities. Committed to empowering its workforce through skill development, diversity and inclusion initiatives, and robust occupational health and safety practices, while simultaneously investing in community development through impactful CSR programmes ensuring that its growth translates into tangible social benefits. This pillar reflects the Corporation's belief that long-term business success is intrinsically linked to the well-being and progress of its people and society at large.	• Training and development • Health & Safety • Diversity and Inclusion • Our Customer centric approach • Labour rights and relations	• Health & safety • Local community • Talent management • Diversity, equity and inclusion & Human rights

By focusing on empowered governance, environmental stewardship, value chain sustainability, and the creation of shared value for people, we are advancing a holistic approach to sustainable growth. Collectively, these pillars form the cornerstone of our sustainability journey and reinforce our alignment with the United Nations Sustainable Development Goals (UNSDGs).

Leading with transparency, integrity, and lasting success

At IndianOil, our commitment to sustainability is underpinned by transparency, exemplary leadership, and strong governance. We believe that openness in our operations and decision-making processes fosters trust and accountability with our stakeholders. Our leadership team is dedicated to embedding sustainability across all levels of the organisation, ensuring that ethical practices and responsible governance are integral to our business strategy. Through robust governance frameworks and transparent reporting, IndianOil continues to uphold the highest standards of integrity, driving long-term value while contributing positively to society and the environment.

All our employees are governed by the Conduct, Discipline and Appeal Rules (CDA), 1980 which provides guidelines on the behaviour and integrity expected of a public servant. Similarly, we follow stringent guidelines for all our suppliers and contractual workforce that is available internally, with codes of conduct and IndianOil's policies governing third-party employees too. In these ways we ensure that we maintain the same high standards of governance across the employee-contractor universe. IndianOil has always remained cognizant of its different responsibilities – to ensure the nation's energy security and independence, while also breaking new ground in environmental preservation and stewardship, social responsibility and stakeholder value creation.

Our Board members embody and execute this delicate balance of responsibilities through the strategies they develop and the decisions they take, while remaining sensitive to market conditions, customer needs, national priorities and national and international legislation and frameworks.

Our ESG priorities are well-integrated with our governance practices, thereby ensuring that our financial performance and future growth pathways always remain closely aligned with our environmental, social, and stakeholder initiatives. Our governance practices uphold transparency and accountability, and we maintain open communication with all stakeholders, building trust and transparency.

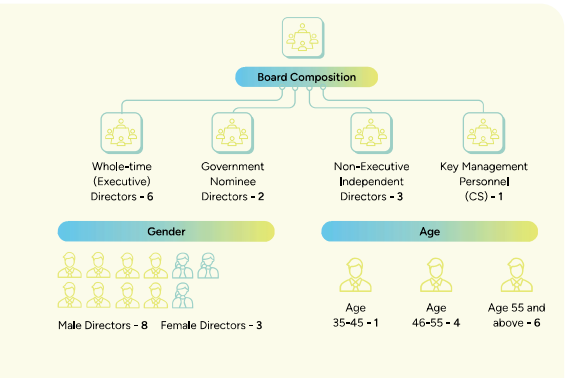
Our Board: The Governance Mainframe

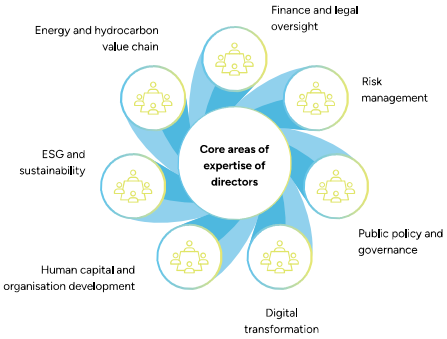
Board Composition and Oversight

The Board of Directors is central to determining the company's strategic direction, setting pragmatic goals and targets, monitoring performance, managing risks, and upholding strong corporate governance practices. The Board comprises individuals from diverse professional backgrounds, including the academia and the government, as well as from the energy sector and other related industries. The accomplished Board members bring their cumulative experience in steering a clear roadmap for IndianOil – a path that is progressive, sustainable and tailored to India's energy needs.

As a CPSE under the administrative control of the Ministry of Petroleum & Natural Gas, the appointment of Directors is conducted by the Government of India, in line with applicable policies and guidelines. The process for appointing Whole-time, Nominee, and Independent Directors follows the Directorate of Public Enterprises (DPE) guidelines, which specify eligibility and selection criteria. In addition, each Director's appointment is proposed to the Board and shareholders for approval, in accordance with the Companies Act, 2013.

The Board is led by an Executive Chairperson, supported by Functional Directors responsible for core operational areas, along with senior leadership. The day-to-day management of the Company is carried out by this executive team. The Board's functioning is further strengthened by various Committees, including the Nomination and Remuneration Committee (NRC), which recommends appointments up to the level of Functional Directors and determines performance-linked incentives and other benefits for senior leadership. The NRC is also responsible for approving promotions to the Executive Director level.





Our Board Level Committees

To streamline decision-making and enhance operational efficiency, IndianOil has constituted 12 Board-level committees comprising a mix of full-time and Independent Directors. These committees provide focused oversight on critical areas and each committee operates with defined roles and responsibilities to ensure transparency, accountability, and compliance with regulatory requirements. Further details on the composition, roles, and activities of these committees are available in the BRSR and the Integrated Annual Report 2024–25.

Audit Committee

Supervises financial reporting and ensures transparent disclosure of financial information

Corporate Social Responsibility and Sustainable Development Committee

Develops and recommends CSR policies outlining key initiatives to the Board, and oversees the sustainability report

Stakeholders Relationship Committee

Manages shareholder and investor concerns, share certificate processes, and oversees general meetings

LNG Sourcing Committee

Reviews and recommends long-term LNG purchase agreements to the Board

Risk Management Committee

Assesses and monitors risk management procedures to mitigate organizational risks

Planning and Projects Committee

Reviews and approves projects with budgets between ₹100–₹250 Crore

Dispute Settlement Committee

Evaluates and advises on dispute settlements over ₹25 Crore for Board approval under the Conciliation Policy.

Contracts Committee

Authorizes contracts exceeding prescribed limits as per the Delegation of Authority

De-leasing of Immovable Properties Committee

Reviews requests for de-leasing company-leased flats, accommodations, and properties

Project Evaluation Committee

Assesses projects costing ₹250 Crore and above prior to Board consideration

Nomination and Remuneration Committee

Approves executive perks and performance pay below Board level and manages senior management appointments and promotions

Marketing Strategies Committee

Shapes marketing strategies and policies and manages dealerships/distributorships.

Upholding Integrity and Neutrality in Decision-making

Our Board and senior management personnel are governed by a Code of Conduct that lays down the ethical, non-partisan and professional behaviour that is required from them as per the Clause 49 of the Listing Agreement with the Bombay Stock Exchange and the National Stock Exchange. At all times, the senior management personnel are expected to fulfill their fiduciary obligations without bias and without expectation of privilege or profit. In conformance with these requirements, in cases of conflict of interest, the affected Director refrains from participating in discussions and decision-making processes.

Vigilance Oversight in Decision Making

Appointed independently by the Government of India, IndianOil's Chief Vigilance Officer (CVO) holds an autonomous position. The CVO attends all Board meetings, ensuring continuous vigilance oversight and reinforcing transparency and integrity at the highest levels of decision-making.

Board Capacity Building and Training

Newly appointed Independent Directors undergo orientation to familiarize themselves with the Company's structure, vision, core business activities, strategic priorities, and governance framework, enabling their effective contribution to Board discussions. Given the growing importance of sustainability and climate-related issues in the oil and gas sector, Directors receive regular training, appraisals, and awards on topics including energy transition, health and safety, risk management, and human rights, through presentations, sectoral updates, and strategic reviews conducted during Board and Committee meetings. They also participate in external training programs and seminars conducted by institutions like SCOPE and other regulatory authorities.

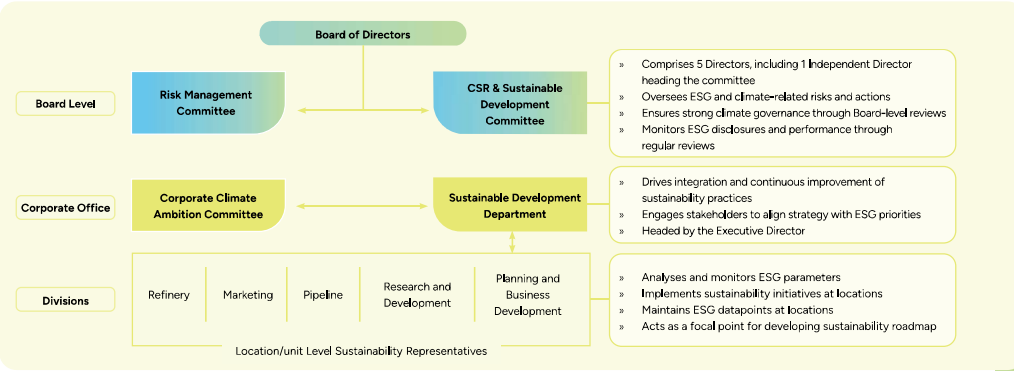
Sustainability Governance

India has set ambitious climate goals for a greener future and IndianOil will play a pivotal role in realizing them. Our Sustainability Governance framework operates as the backbone for embedding these goals and targets into our operations and daily activities and in ensuring their effective execution. By doing so, we bring efficacy and accountability to the country's climate-related ambitions.

We follow a three-tier Sustainability Governance structure, with a clear focus on operationalizing our activities towards a low-emissions future. We have established interdivisional Corporate Climate Action Committee that is responsible for developing internal divisional targets, reviewing mitigation plans, monitoring progress, evaluating corporate sustainability communications, and ensuring appropriate resource allocation in line with our Net Zero commitments.

The Sustainable Development (SD) department leads IndianOil's efforts to drive ESG Strategy and decarbonization roadmap at corporate level. It embeds sustainable practices into core operations while working closely with stakeholders to capture emerging expectations and priorities. 15.38% of the Board of Directors participated in awareness programs, including capacity building for functional directors of Central Public Sector Enterprises.

At the operational level, sustainability representatives across divisions and sites connect corporate ESG planning with execution, monitoring performance, building awareness, and driving continuous improvement across IndianOil. The Sustainability Department at Corporate Office, reporting to the Director (P&BD), oversees the company's sustainability and transition plans. The CSR & SD Board Committee monitors climate risk management and actions. Clear roles are defined for executing the transition plan, with employee performance linked to net-zero contributions. Committee members possess the expertise to manage climate risks and opportunities.



Policy Framework: Directing Our Course

IndianOil's policy framework is designed to ensure alignment with all applicable statutory laws, Government guidelines, and regulatory requirements. While formulating policies, the Company also references relevant national and international standards, as well as industry best practices, to uphold high standards of governance and sustainability.

These policies are regularly reviewed and updated to stay responsive to emerging business trends, evolving stakeholder expectations, and shifts in the regulatory landscape. Once approved by the Board and/or designated authorities, the policies are translated into actionable procedures and communicated through various internal and external channels. Relevent policies and guidelines are applicable to our value chain partners to ensure that responsible and consistent practices are followed within our operational ecosystem.

Sustainability & CSR Policy

IndianOil's Sustainability & CSR Policy is anchored in its vision to provide energy solutions that are efficient, safe, and ethical, minimizing environmental impact while enhancing community well-being and ensuring sustainable growth of the business and the nation. Guided by this vision, the mission emphasizes creating stakeholder value, integrating environmental and social considerations in decision-making, upholding ethics and transparency, and leveraging technological and social innovation to support the Sustainable Development Goals.

Our key thrust areas include operational efficiency, workplace safety, societal empowerment, and tourist-friendly facilities near cultural sites. We promote sustainable practices, responsible business with transparency and integrity, and disclose sustainability performance per national and international regulations.

Culture of Ethics and Responsibility

We are committed to embedding integrity, accountability, and transparency across all levels of the organization—ranging from the Board of Directors and senior leadership to employees and business partners. Ethical decision-making is central to our operations and risk management through a framework of well-defined policies, robust governance processes and grievance redressal mechanisms that uphold accountability across the organisation.

100%
of operations assessed for corruption-related risks

Our Code of Conduct is a foundational governance tool that outlines expected ethical standards, professional behavior and fundamental integrity from all employees, Board members, and senior management. The Code serves as a guide to decision-making in different scenarios, especially in situations that may present potential conflicts of interest. All employees are required to disclose material, financial, and commercial interests, including dealings in IndianOil shares or transactions involving related parties. Likewise, any conflicts of interest between professional and personal affiliations and dealings need to be reported else the Company may take disciplinary action. Regular training sessions are conducted to reinforce understanding and implementation of the Code. During the reporting period, there were no recorded violations of the Code of Conduct for Board Members and Senior Management Personnel or incidents of conflict of interest involving the Board or Key Managerial Personnel, reaffirming our collective commitment to ethical business practices. Similarly, our suppliers and contractual workers are required to adhere to our strict internal guidelines that clearly define the conditions of business Punitive action and disqualification may be done in cases of infringement.

ZERO
- Instances of unfair trade practices
- Anti-competitive behavior
- Data breaches

During the financial year, five incidents of corruption were identified and addressed in accordance with our established disciplinary and ethical conduct procedures.

Ensuring a Corruption-Free Work Environment

IndianOil upholds a zero-tolerance policy towards bribery, corruption, and the misuse of confidential information, in conformance with the laws of Government of India. Generation of price sensitive information is part of our daily activities and all parties that have access to such information are part of a digital database for Unpublished Price Sensitive Information (UPSI). The clauses of the Code of Conduct also require transparent disclosure of IndianOil holdings by senior management to safeguard against insider trading and the unfair use of confidential information. IndianOil adheres to rigorous guidelines on the acceptance and giving of gifts to uphold integrity and prevent corruption and bribery. Further, IndianOil does not make any direct or indirect, financial or material political contributions. Company contributions to charitable organisations are approved and authorised in accordance with the Company's policies and systems of authority. During the reporting year, no such contributions were made to political organizations of any country, or any other recipient or beneficiary.

All equipment/ materials or workmanship that we procure from our suppliers/vendors are subject to surprise inspection and testing with the right to carry out such due diligence at any stage of production and dispatch right from the raw materials, at the shopfloor or even after completion of packing. Such stringency helps us maintain exacting quality standards and ensure that our contractors deliver what they promise.

Our Vigilance department oversees all organizational activities to check any kind of fraud or corruption, taking actions that work in preventive, punitive, and participatory ways, to achieve its objectives. As a CPSE, IndianOil comes under the purview of the Central Vigilance Commission (CVC) and the Vigilance Department acts as its representative and liaison within IndianOil. The Vigilance Department, under the leadership of the Chief Vigilance Officer (CVO), ensures adherence to CVC guidelines and strengthens overall standards through awareness drives, system improvements, and timely redressal mechanisms that align with CVC directives. Our high standards of probity and integrity are further reflected in our enforcement of the Conduct, Discipline, and Appeal Rules, 1980, and Certified Standing Orders, with disciplinary actions like termination or negative performance appraisals being done in case of observed irregularities. During the year, 2015 Disciplinary matters related to Vigilance cases were disposed off and 44 cases were pending at the end of the year.

IndianOil's Whistleblower Policy empowers employees to confidentially report concerns related to unethical behavior, fraud, or violations of the Code of Conduct—such as breaches of legal, regulatory, or insider trading norms. The policy explicitly ensures protection against victimization for whistleblowers, reinforcing trust in ethical governance. Reports can be made directly to the Competent Authority or the Chairperson of the Audit Committee, providing secure internal channels for escalation. The identity of the whistleblower is kept confidential and safeguards are in place to ensure fairness and transparency throughout the investigation process.

Setting the Foundation for Greater Integrity

With the objective of fostering public awareness on the significance of integrity, IndianOil launched dedicated publications for its internal stakeholders, including VIGIL Magazine 2024 and a Compendium of Vigilance Case Studies 2024, aimed at enhancing knowledge sharing and awareness within the organization. For external stakeholders, extensive outreach programs such as Nukkad Nataks, Cyclothons, Walkathons, Gram Sabhas, Satarkta Raths, and awareness workshops were organized across various locations in India to promote the principles of integrity, accountability, and transparency in public life.

Creating a Safe Workplace for All

Promoting a safe, inclusive, and respectful work environment is fundamental to IndianOil's organizational culture. We enforce a strict zero-tolerance stance toward all forms of workplace discrimination and harassment, including sexual misconduct and other forms of intimidation or harassment. We are committed to paying a living wage and minimizing overtime to ensure fair labor practices and promote employee well-being. Furthermore, IndianOil upholds fair labor practices such as by setting maximum working hours, ensuring equal remuneration for men and women, and compensating workers for annual leave. We apply these principles throughout our operations, supply chain, and business partnerships to promote transparency and reinforce our commitment to respect labor rights. Any such incidents are thoroughly investigated, and appropriate corrective or disciplinary actions are promptly taken to uphold a safe, inclusive, and respectful workplace.

Further, to build greater sensitivities around gender and discriminatory conduct, we regularly organize awareness workshops, with a focus on male employees. Our compliance framework is regularly assessed by statutory authorities, internal audit teams, and third-party reviewers to ensure we remain relevant and aligned with changing legislation, while continuing to provide a safe, equitable and inclusive environment for all. During FY 2024–25, four complaints of sexual harassment were filed, six cases were resolved, while three remain under review.

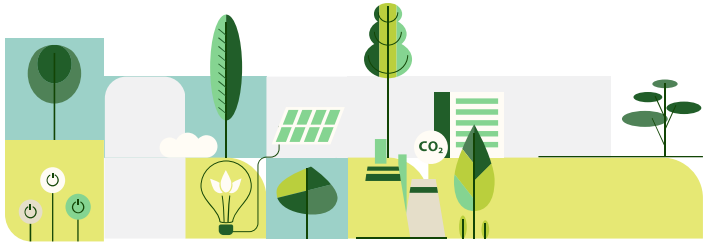
Training & Awareness

Training and awareness programs are also conducted to educate all our employees about workplace rights, legal provisions under the Sexual Harassment Act, and available redressal mechanisms.

Respecting Human Rights

IndianOil is committed to upholding human rights across all our operations, in keeping with the statutes of the Constitution of India, national legislations, and internationally recognized frameworks. We maintain a zero-tolerance policy and strictly prohibit the use of child labour, forced labour, slavery, discrimination, harassment and any form of human trafficking. Furthermore, we extend this prohibition to include violations of the Right to Freedom of Association and collective bargaining, as well as any form of discrimination. These principles are implemented across all our operations, suppliers, and business partners to ensure transparency and uphold our commitment to human rights.

IndianOil has a Prevention of Sexual Harassment Policy and an Equal Opportunity Policy, which ensures that women are protected against discrimination and intimidation at the workplace. The Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013, is aligned with our policy and is implemented across



all offices and operational sites. At each location, Internal Committees—chaired by senior women employees—are established to manage complaints in a structured, sensitive, and confidential manner. Each reported incident is investigated by the designated Complaint Committee, and disciplinary actions are taken in accordance with IndianOil's Conduct, Discipline, and Appeal Rules, 1980.

Our human rights related rules and internal regulations are informed by a host of national labour laws and statutes including the Child Labor Act, Payment of Wages Act, Minimum Wages Act, 1948, Employees State Insurance (ESI), Payment of Bonus Act, Employees Provident Fund (EPF), Contract Labour law, etc. Additionally, all new recruits undergo induction training that includes human rights awareness, cultivating a culture of respect and accountability from the outset.

We fully comply with all the United Nations Global Compact (UNGC) principles. This encompasses compliance with the ten principles covering human rights, labour practices, environmental protection, and anticorruption measures.

United Nations Global Compact

Operationalizing Human Rights

We provide extensive training on safety protocols, statutory entitlements, and corporate policies that uphold human rights practices. Effective implementation is verified through our Compliance Audit Programmes, which assess actual working conditions, remuneration practices, and adherence to requirements such as minimum wages, timely payments, overtime norms, and social security benefits.

Due Diligence for Our Own operations & Value Chain

Elaborate due diligence mechanisms support our human rights commitments. Human rights due diligence extends across all of our operational locations that can maintain 100% compliance with statutory provisions. Compliance is ensured through periodic internal inspections that ascertain whether human rights' aspects like Prevention of Human Trafficking, Freedom of Association, Right to Collective Bargaining and Negotiation for wage settlement, Equal Remuneration, Prevention of Discrimination are being monitored and implemented. The process of human rights due diligence is extended to our existing and new suppliers, to women employees and contractual labour, local communities and indigenous people and any other new business relations that we may have formed during the year.

Suppliers and their sub-agencies are contractually obligated to comply all laws that are applicable for IndianOil employees. These include the Payment of Wages Act, Minimum Wages Act, Employees Provident Fund and Miscellaneous Provisions Act, Employees State Insurance Act, Maternity Benefit Act, Child Labour (Prohibition and Regulation) Act, Contract Labour (Regulation and Abolition) Act, and Factories Act. The Contractor's Labour Regulations and Model Rules for Labour Welfare form a binding part of supplier agreements and must be adhered to in both letter and spirit.

Rigorous due diligence processes are followed at the time of vendor onboarding and contract renewals. This includes screening for human rights risks, accompanied by formal declarations of compliance.

Every unit has a mechanism for addressing human rights-related concerns, with clear escalation protocols in place for timely resolution. In this way, we ensure strong human rights compliance across every part of our extensive operations, from the ground-up.

In practice, we have one recognized union at individual locations that is allowed to engage in collective bargaining. Overall, about 93% of our permanent employees are covered by various Unions / Employee Associations.

Human Rights and our Neighboring Communities

Our commitment to human rights extends to the communities in which we operate. We have regular means of engaging with our neighbouring communities and remain vigilant about not infringing on the rights or moveable or immoveable properties and possessions of local or indigenous populations, through our activities. Our collaborative and adaptable approach helps us maintain our social license to operate in an amicable way.

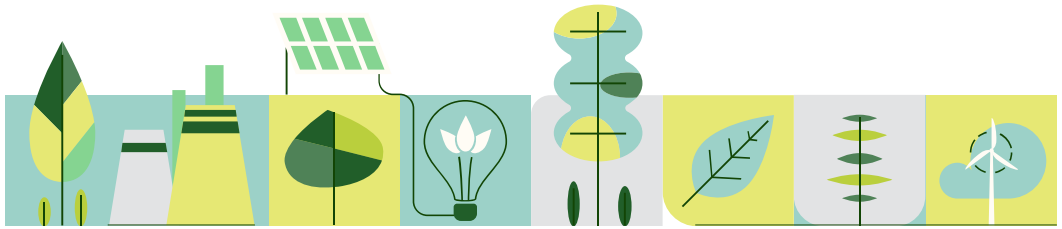
Building a Fair, Equitable and Ethical Value Chain

We regard our suppliers and vendors at par with our employees in terms of the ethical standards governing work conditions and pay. The labour laws and employment practices that are applicable for our employees are extended to all value chain partners. All our vendors and suppliers are required to submit declarations confirming compliance with applicable labour laws and employment standards.

Given that human rights are a core component of our supply chain governance, all tender documents and contracts, including the General Conditions of Contract (GCC), mandate strict adherence to applicable labour laws and explicitly prohibit child labour, forced labour, and discrimination based on gender, caste, creed, disability, citizenship, or place of origin.

To ensure the proper implementation or human rights- and labour-related laws by third parties, IndianOil reserves the right to inspect supplier sites and records. Any breach of these requirements may result in financial recovery or termination of contract. Suppliers must indemnify IndianOil against any claims or liabilities arising from non-compliance with labour-related regulations.

During the reporting period, no incidents of rights violations involving indigenous communities were reported.



Supplier Programmes

Annual assessments are conducted for both new and existing suppliers, covering compliance with all statutory government mandated employee benefits and labour laws. All the aspects that are covered under our Human Rights Commitment are strictly covered under our due diligence process for our suppliers risk assessment. Further, safe working conditions, and fair treatment of women and indigenous groups are also assessed. We ensure that high standards of human rights compliance are retained throughout vendors' tenure with us through continuous capacity building in the form of training sessions and awareness workshops.

ZERO
Complaints related to child/forced labor

During the year, IndianOil conducted ESG and procurement awareness programs covering 100% of our value chain. Topics included SOP training, sustainability in HR, sustainability management, alternate fuel technology, renewable energy workshops, and sustainable development.

Stakeholder Channels

Employees
- Centralised Public Grievance Redress and Monitoring System (CPGRAMS)
- Grievance redressal portal for lodging and tracking complaints online

Vendors & Suppliers
- Dedicated complaint portal on the IndianOil website
- Direct access to vigilance department for reporting unethical/illegal activities

Customers
- Multiple touchpoints for feedback & complaints:
- IndianOil ONE mobile app and website
- Toll-Free helpline number
- In-person at IndianOil customer touchpoints

Local Communities
- Multiple touchpoints for feedback & complaints
- IndianOil ONE mobile app and website
- Toll-Free helpline number
- Local CSR Officers or Nodal Officers at sites
- Email and postal correspondence

Addressing Grievances

IndianOil is committed to identifying, addressing, and remediating any actual or potential negative impacts related to its operations through a robust grievance redressal framework . The mechanism is designed to be accessible, transparent, and responsive, enabling all stakeholders to raise concerns regarding ethical conduct, service delivery, general inconveniences, or any form of misconduct. Oversight of grievance-related matters is ensured through the Stakeholders' Relationship Committee at the Board level. In addition, digital platforms have been instituted to facilitate the confidential lodging and tracking of complaints, ensuring timely resolution and accountability. There are safeguards in place to protect complainants from any form of retaliation. Through this framework, IndianOil reinforces its commitment to responsible business conduct and continuous improvement in stakeholder engagement.

Our Compliance Mechanisms: Defining the Boundaries

Adhering to Regulatory Standards

IndianOil is committed to upholding the highest standards of legal and ethical conduct across all its operations. We maintain strict compliance with all applicable national laws and international standards, supported by a structured system to monitor, assess, and continuously improve our compliance practices. We are equally stringent about integrating the best and the latest quality standards into our operational processes.

Sustaining Excellence Through International Certifications

IndianOil renews and maintains the following ISO certifications across applicable sites every year:

We ensure compliance with guidelines issued by regulatory authorities such as the Oil Industry Safety Directorate (OISD), Petroleum and Natural Gas Regulatory Board (PNGRB), and adhere to the Consent to Operate (CTO) and Consent to Establish (CTE) norms of the State Pollution Control Boards (SPCBs) and Central Pollution Control Board (CPCB). These compliances reflect our resolve to remain environmentally responsible. During the reporting period, no instances of non-compliance with environmental laws and regulations were recorded. These were addressed in accordance with internal protocols and corrective actions were implemented. Further details are available under Principle 6 of our BRSR 2024–25. We adhere to the provisions of the Competition (Amendment) Act, 2023, and do not engage in or support any form of anti-competitive behavior.

No violations related to anti-competitive practices were reported in FY 2024–25.

We follow a rigorous due diligence process for setting up new ventures and at the start of both greenfield and brownfield projects a detailed Environmental Impact Assessment (EIA) is carried out, in compliance with the guidelines of regulatory bodies like MoEFCC, CPCB, SPCBs, and any other. We also ensure third-party impact assessments are conducted for the CSR projects that we undertake or sponsor to evaluate their effectiveness and long-term sustainability. Further details can be found in the Community Development section of this report.

₹110 Crore
Spent on Pollution Control Expenses

Tax Practices

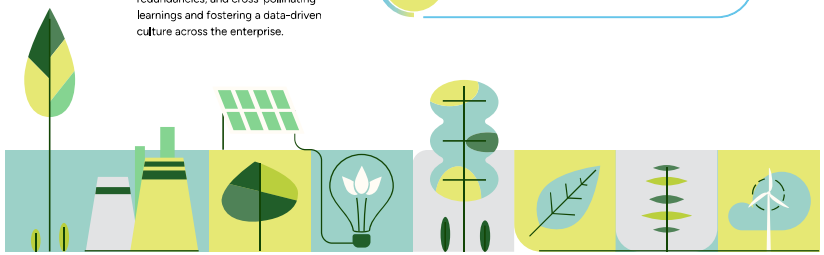
IndianOil observes full compliance with all applicable tax laws and regulations in India. Our tax policy is founded on transparency, and all our tax arrangements are based on genuine commercial transactions and legitimate relationships. We categorically avoid any arrangements that are not fully verifiable and transparent. Our tax policy is overseen by the Director (Finance), which ensures transparent, accurate, and timely filings of all tax-related matters. Furthermore, we are ensuring transparency in our tax arrangements that have genuine commercial substance, avoiding any structures that lack such integrity. In our dealings with foreign entities, we maintain full compliance with all applicable national and international laws, arrangements and regulations, and adhere to the arm's length principle.

Our Security Infrastructure: Protecting the Core Protecting our Infrastructure

Digitization Transformation

At IndianOil, digital transformation is a strategic enabler for innovation, efficiencies, and long-term sustainability. Our complex operations are highly-technology intensive and as technologies keep evolving within the dynamic energy landscape, we are harnessing the power of emerging technologies like artificial intelligence, machine learning, robotics, and advanced data analytics to optimize operations, sharpen our cost advantage, enhance decision-making, and improve stakeholder experiences. Our digital journey forms the foundation for future-proofing the organization. We are doing this by modernizing core systems, streamlining business processes, removing redundancies, and cross-pollinating learnings and fostering a data-driven culture across the enterprise.

- SDMS CRM Platform Upgrade: Upgraded to enhance customer relationship management.
- Cybersecurity Measures: Implemented Managed Detection & Response (MDR) for endpoints and Breach & Attack Simulation (BAS) services to boost cyber resilience.
- eCAMS-II / Samanvay Portal: For digitization of management reports on the performance of group companies of IndianOil.
- Office 365 Suite a for all officers, enabling seamless digital collaboration.



Cybersecrutiy Framework

In our increasingly interconnected and digitalized world, the hidden dangers of cyberspace are omnipresent and ever increasing. IndianOil has adopted a robust, multi-layered cybersecurity framework that is designed to protect our operations from evolving threats and ensure the confidentiality, integrity, and smooth availability of data.

To bolster preparedness, we maintain dedicated insurance coverage against cyber incidents and data breaches. Any violation of security protocols is dealt with through. Any breach of cybersecurity policies will be addressed promptly and may lead to suitable disciplinary measures to ensure compliance and safeguard our systems. Our Chief Information Officer oversees cybersecurity to ensure resilient and secure digital operations that underpin the company's long-term sustainability objectives. IndianOil has established a mirrored disaster recovery site and multi-tiered redundancies across its IT infrastructure to ensure continuity of operations in the event of disruptions to core systems. Our IT infrastructure and Information Security Management Systems (ISMS), which includes our corporate data centers, are a critical part of external audits undertaken every year. The ISMS at our Corporate Data Centre was successfully audited by M/s URS during the last fiscal year. Additionally, Vulnerability Assessment and Penetration Testing (VAPT) for all public-facing websites, security appliances, and critical infrastructure is conducted at least annually by a CERT-In empaneled auditor, further strengthening our cybersecurity position.

Tools
- Multi-staged firewalls
- Intrusion Prevention Systems (IPS)
- Anti-virus / malware solution
- Web and e-mail security gateways
- Virtual Private Networks System
- Central Security Information and Event Management (SIEM) solution

Awareness
- Educational cyber-attacks
- Mock phishing exercises
- Cyber hygiene e-book
- Cyber security tips
- Training sessions
- Video conferencing

Audits
- Cyber security audit of critical and web-facing applications
- Vulnerability assessment and penetration testing

Security
- Centralized Security Operation Centre
- Comprehensive patch management system

All our data centers are ISO 27001:2013 certified, reflecting our commitment to maintaining global standards in information security.

ZERO
Information security/data breaches

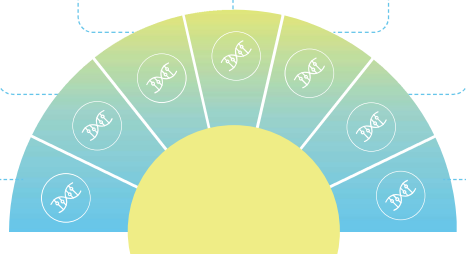
IndianOil follows a robust Data Privacy Policy for personal data management

Our Data Privacy Policy is fully aligned with all applicable Indian laws, including the Information Technology Act, 2000 and the Aadhaar Act, 2016. The policy ensures that personal data is collected, processed, stored, and used strictly for its intended purpose, in accordance with the principles of "Reasonable Security Practices and Procedures." We apply robust data management and protection protocols across our operations to maintain the confidentiality and integrity of sensitive information. To address privacy and cybersecurity concerns, we have established a dedicated grievance redressal mechanism.

Creating a Strong Cybersecurity Infrastructure Through Proactive Practices

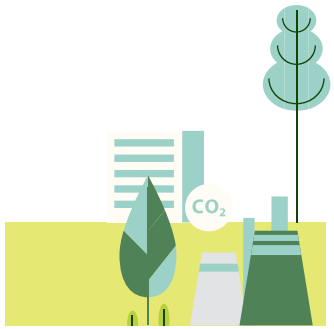
We follow a number of cybersecurity safeguards to protect all our systems, data and processes from malicious cyber attacks and other kinds of hostile intrusions. These include:

- Build and strengthen strategic partnerships with national cybersecurity agencies such as CERT-In, NCIIPC, and the Intelligence Bureau to enhance defence capabilities and system resilience.
- Prioritise security alerts and ensure timely implementation of remedial actions across the organisation.
- Foster a high level of cybersecurity awareness through regular employee training programmes focused on emerging threats and first-line defence practices.
- Constant monitoring of systems to detect potential cyber threats, vulnerabilities, data breaches, and privacy violations. Comprehensive external audits are also conducted to assess cyber preparedness and identify any gaps.
- Maintain a dedicated Cyber Action Team that ensures 24×7 readiness for rapid response to hostile intrusions or cyber incidents.
- IndianOil's Internal Audit Department—reporting to the Board—includes regular IT audits, reviewing general IT controls such as access management, change management, data backups, segregation of duties, and incident response protocols.
- Implement comprehensive security measures for all digital resources, data centres, and operational technology (OT) environments.



Protecting Our Infrastructure

IndianOil operates a vast network of refining, distribution, and marketing operations, which includes its 9 refineries and over 20,000-odd-kms of pipeline coverage across the Indian subcontinent. In fact, IndianOil operates the largest pipeline network in India and across very diverse topography. We place the utmost importance on securing our physical infrastructure, given its strategic significance for India's economic stability and national security. To safeguard our assets from potential threats, losses, or damage, we maintain a robust security apparatus comprising personnel from the Central Industrial Security Force (CISF) and the Directorate General of Resettlement (DGR). These dedicated teams undergo regular training to ensure readiness in managing any security incidents, thereby upholding the safety and continuity of our critical operations



CASE STUDY

Innovative Utilization of Drones for Pipeline Surveillance and Security

To strengthen the safety and reliability of its cross-country pipelines, IndianOil piloted drone-based surveillance over a 120 km stretch of the Paradip-Raipur-Ranchi Pipeline (PRRPL) during FY 2024-25. The initiative aimed to improve real-time monitoring, reduce inspection time, and enable early detection of potential threats—particularly in difficult and remote terrains where physical patrolling is challenging.

Key Features of the Pilot Deployment:

- **AI/ML-Driven Object Detection**
- **Centralized Monitoring and Control**
- **LOITER Command Functionality**
- **24/7 Surveillance Capability**
- **Automated Safety Mechanisms**

Highlights 2024-25

~1.5 $MtCO_2e$	62 Lakhs+	252.1 MW	39.8	71%
Emissions mitigated/offset	Surviving trees	Renewable energy portfolio	Billion Litres wastewater recycled	Total waste recycled/ reused/recovered

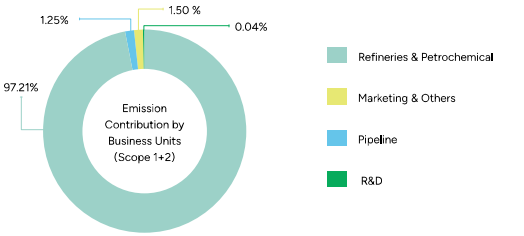
Environmental stewardship is an integral part of our mission to deliver energy solutions that foster sustainable growth. As one of India's largest and most diversified energy companies, we recognize the critical importance of safeguarding the environment for future generations. We are committed to adopting best practices in environmental management, reducing our carbon footprint, and addressing climate-related challenges. We recognize the important role that we play in India's Net Zero by 2070 goal and our own Net Zero by 2046 pledge is designed to contribute towards making that national priority a reality.

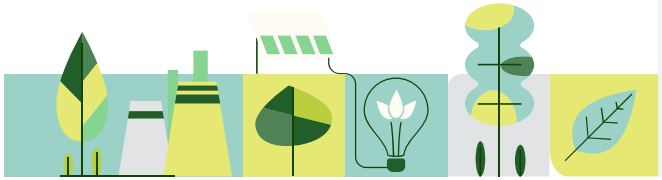
Our commitment towards environmental stewardship embraces the use of cleaner refining technologies, the promotion of alternative fuels, consistent reduction in freshwater use, and the adoption of circular economy principles, we strive to minimize waste and optimize resource use. By integrating sustainability into our business strategy, we aim to achieve the mandate of Net Zero by 2046 against the backdrop of fast rising energy demand, with incremental capacity additions being made in a basket of clean technologies and consistent transitioning to low-carbon operations. Our longstanding sustainability approach has been to actively preserve biodiversity and ecosystems, and we are proud to have been a frontrunner in safeguarding India's species diversity and ecological wealth. In all these ways we contribute to a greener, more resilient future for both our stakeholders and the communities we serve. We actively engage with stakeholders like regulators, communities, employees through collaborative engagement modes to address environmental concerns and enhance sustainability efforts. At IndianOil, we have implemented comprehensive programmes across our operations to raise awareness and enhance knowledge among our workforce on energy efficiency, waste reduction, climate change mitigation, water conservation, and the importance of adopting environmentally friendly practices.

Our Emissions Management Journey

We recognize that even a single step, taken with intention and consistency, can make a meaningful difference in slowing the pace of climate change. We have come a long way through our integrated approach to emissions management, targeting reductions in GHG emissions across our operations.

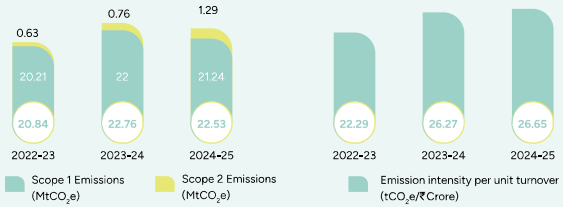
IndianOil has committed to achieving Net-Zero operational emissions (Scope 1 & 2) by 2046, supported by an investment of Rs 2.5 lakh crore in renewable energy, energy efficiency, carbon capture, and green hydrogen. Given the high energy demand scenario, emissions reduction within our operations form the core of our Net Zero journey.





Scope 1 and 2 Emissions

Our Scope 1 or Direct Emissions predominantly originate from our refineries and petrochemical plants, comprising of common GHGs like carbon dioxide, methane and nitrous oxide. IndianOil estimates Scope 1 emissions from fuel use in stationary processes, captive electricity generation, and company-owned vehicles, while also accounting separately for the limited flare gas emissions from its refinery operations. Scope 2 or energy indirect emissions result only from grid electricity imports within our operations. We follow established methodologies under the GHG protocol and IPCC to accurately calculate our Scope 1 & 2 emissions ensuring transparency and alignment with global best practices.



Scope 3 Emissions

This category of emissions lies outside our operational boundary but makes up a sizeable share of our carbon footprint. The major contributing categories are emissions from fuel use and other energy activities, upstream and downstream transportation and distribution, waste generated in operations, use of sold products and business travel.

We annually estimate total GHG emissions from six key Scope 3 categories, with over 90% of these emissions arising predominantly from the end use of our sold products.

353.88 $MtCO_2e$

Total Scope 3 emissions in FY 2024-25

Scope 3 category	Category name	FY 2024-25($MtCO_2e$)
Category 3	Fuel and Energy Related activities	0.36
Category 4	Upstream Transportation and Distribution	20.17
Category 5	Waste Generated in Operations	0.0047
Category 6	Business Travel	0.022
Category 9	Downstream Transportation and Distribution	2.55
Category 11	Use of Sold Products	330.78

Decarbonisation

IndianOil has taken its Net-Zero target for 2046, with greenhouse gas (GHG) emissions anchored on the emission from 2021-22 and estimated in line with internationally accepted methodologies, including the GHG Protocol, DEFRA, and IPCC guidelines, and validated through third-party assurance. The scope covers key GHGs such as carbon dioxide, methane, and nitrous oxide. In the near to medium term, the company is prioritizing efficiency improvements and scaling renewable energy, alongside initiatives in bio-energy, green hydrogen and nature-based solutions. Over the longer horizon, IndianOil is advancing research and pilot projects in Carbon Capture, Utilization and Storage (CCUS) as part of its decarbonization pathway. These efforts are backed by substantial financial commitments, reflecting a structured roadmap with clearly defined interim and long-term milestones to achieve net zero.

A significant part of our Net Zero target accounts renewable energy (RE) consumption. IndianOil has established a dedicated green energy subsidiary, Terra Clean Limited, to drive the development of its green energy portfolio. By 2030, we aim to develop a portfolio of 31 GW of renewable energy further scaling it to 200 GW by 2050.

In continuation to our efforts of greening our operation, we have also made an effort towards increasing green cover in our operational facilities, as well as preserving and protecting marine and coastal ecosystems that help in CO_2 sequestration. We have also taken measures to minimize our transportation and distribution related emissions through improved logistics and pipeline infrastructure

Net Zero

IndianOil's Net Zero by 2046 pledge aligns with India's Net Zero by 2070 target. As the country's leading energy provider, our decarbonisation efforts and our Net Zero pledge forms a critical part of the country's energy transition roadmap, and we are key enablers of the transformation.

Our Net Zero commitment is driven by several decarbonisation levers that span our entire value chain. IndianOil has identified and adopted eight levers that will help us achieve the target of Net Zero by 2046. These levers, embedded in our sustainability initiatives play a pivotal role in advancing our vision.

Net Zero Commitment: ₹2.5 lakh Crore commited to support the Net Zero 2046 target

Energy Efficiency
Around ₹800 Crore invested since FY 2022-23

Renewable Energy
- ₹5000 Crore embarked to establish 5.3 GW of renewable energy capacity via Terra Clean Ltd.
- ₹1660 Crore to be invested as equity in IndianOil NTPC Green Energy Pvt Ltd.

Nature Based Solution
₹56 Crore allocated under the Green Credits Programme (GCP)

Use of Bio-energy in operations
More than ₹1000 Crore to be invested

Green hydrogen Transition
10KTA green hydrogen plant at Panipat refinery

Achieve Net-Zero Operational Emissions
- Renewable Energy
- Green Hydrogen
- Nature Based solution
- CCUS

Sourcing Renewable Energy
- Renewable Energy

Renewable Energy Initiatives

With an installed renewable energy capacity of 252.1 MW, we achieved renewable power generation of 365.72 GWh during 2024–25, resulting in mitigation of 0.28 $MtCO_2e$ emissions.

As part of IndianOil's renewable energy initiative, we are actively expanding our solar energy portfolio across India, with installations in Odisha, Karnataka, Rajasthan, and other states.

Collabarations in Renewable Energy

- JV with M/s SJVN Ltd – Draft JVA & business plan finalized & proposal for board approval initiated on 08.08.2025. JV Formation Target – March 2026.
- JV with M/s SECI - Board approval for formation of JVC for building large-scale RE projects, is initiated & under approval, Target- March 2026
- JV with M/s GIPCL Ltd -for building Solar+ Wind+ Storage capacities,–Draft JVA & business plan under process. Board approval Target- March 2026.
- JV with M/s RVUNL- non-binding MoU signed, Draft JVA finalized, Financial model under progress.
- JV with M/s NHPC- non-binding MoU signed on 27.06.2025 to jointly develop PSP, hydro & RE projects.

Our current RE portfolio

Solar

84.5 MW installed capacity

Wind

167.6 MW installed capacity

A Green Alliance

IndianOil entered into a landmark 25-year Power Purchase Agreement (PPA) with NTPC Green Energy Private Limited (INGEL) to secure 650 MW of round-the-clock renewable power. This agreement marks a major step in IndianOil's journey toward achieving net-zero operational emissions by 2046. The renewable power supply is expected to cut IndianOil's carbon emissions by approximately 3.6 Mt annually. This initiative reflects IndianOil's commitment to decarbonisation and long-term sustainability through strategic clean energy partnerships.

Terra Clean Ltd. - Driving the Renewable Energy Transition

IndianOil has strengthened its clean energy portfolio through its wholly-owned subsidiary Terra Clean Ltd., established in May 2024 to spearhead renewable energy initiatives. With an initial investment of ₹1,304 crore at incorporation, Terra Clean Ltd. was set up to consolidate green ventures, optimize resource allocation, and accelerate innovation in the clean energy sector.

In April 2025, IndianOil's Board approved an additional equity infusion of ₹1,086 crore in Terra Clean Ltd. to develop 4.3 GW of new renewable energy capacity, complementing the already sanctioned 1 GW. This strategic investment reinforces IndianOil's long-term commitment to redefining the energy landscape with a strong emphasis on clean, sustainable, and future-ready solutions.

Green Hydrogen

We are pioneering India's green hydrogen ecosystem through the country's most ambitious project which is a 10,000 tonnes per annum electrolyser based green hydrogen plant at Panipat refinery and petrochemical complex, scheduled for commissioning by December 2027.

The Green Hydrogen produced will replace fossil-derived Hydrogen in refinery operations, resulting in substantial reduction in carbon emissions.

The plant is being developed on build-own-operate (BOO) basis, marking a significant milestone in India's energy transition. Additionally, green hydrogen facilities are planned across IndianOil refineries as part of its broader decarbonisation strategy.

Our target is to convert 50% of our total hydrogen consumption to green by 2030

In collaboration with IIT Kharagpur, we have made significant progress in developing a Type III composite cylinder with a 57-litre water capacity, which enhances both the safety and efficiency of green hydrogen storage

IndianOil - pioneering green hydrogen mobility

Energy Conservation

Energy conservation remains a core focus across operations, with continuous efforts to optimise processes and reduce energy intensity. We conduct energy audits across our operations in line with the Energy Conservation Act and Bureau of Energy Efficiency (BEE) guidelines, enabling the identification of energy saving opportunities and implementation of efficiency-enhancing measures.

Optimizing our energy use through the adoption of energy-efficient technologies across our operations is a critical part of our energy management strategy. Recovery and reuse of waste heat and gases are an effective way of optimizing energy use. The use of waste heat recovery systems to capture and reuse thermal energy produced from our different processes is a standard procedure at our facilities. IndianOil has also adopted flare gas recovery systems that capture flare gases released at the time of processing operations, which would otherwise be combusted. The recovered flare gas is repurposed, reducing waste and enhancing resource efficiency while minimizing environmental pollution.Such optimisation in process inputs, or in process elements, helps us to derive both absolute and multiplier benefits that add momentum to our Net Zero by 2046 roadmap.

Additionally, regular monitoring and targeted initiatives at refineries have delivered measurable energy savings while reinforcing cost competitiveness.

100%

IndianOil refineries ISO 50001 standard certified

Indian Carbon Market

IndianOil will be participating on obligation with emerging Carbon Credit and Trading Schemes (CCTS) to align with national and global decarbonization goals. Through investments in renewable energy, energy efficiency, and low-carbon technologies, the company is building a strong portfolio of eligible carbon assets. Participation in carbon markets not only supports India's climate commitments but also creates value by monetizing emission reductions. IndianOil's approach integrates carbon trading into its broader Net Zero roadmap, ensuring financial resilience and regulatory preparedness. This strategy positions IndianOil as a key contributor to a transparent, credible, and impactful carbon market ecosystem.

Energy Conservation and Optimisation Schemes

Renewable Energy Integration
- Solar and wind projects
- Power import and grid optimisation (focused on clean energy sourcing)

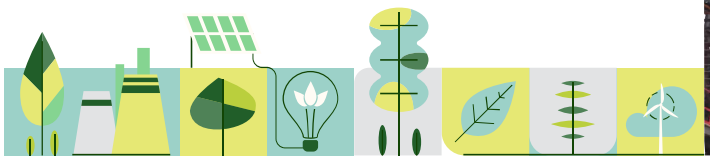
Industrial Process Optimisation
- Process equipment efficiency enhancements
- Optimized fluid transfer systems
- Steam and furnace system optimisation

Energy-Efficient Infrastructure and Building
- Sensor based lighting systems
- Energy-efficient HVAC systems
- Smart office retrofitting

Energy Recovery & Power System Efficiency
- Heat recovery systems
- Use of energy efficient transformers/capacitors

Smart Controls & Automation
- Lux-based auto-control systems for lighting
- Timers and sensor controls for electrical loads

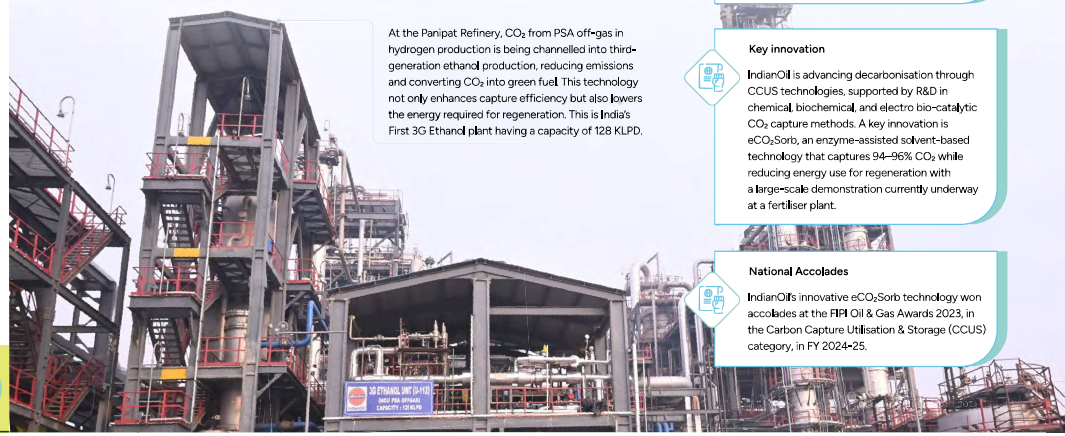
Cleaner Fuel Transition
- Fuel switch to NG/RLNG for turbine efficiency
- DG sets fuel switched to more efficient fuel



Carbon Capture, Utilisation and Storage (CCUS)

IndianOil is advancing its efforts in Carbon Capture, Utilisation and Storage (CCUS) to support low-carbon transition pathways. As part of these initiatives, IndianOil is implementing site-specific projects to demonstrate the practical application of CCUS.

In parallel, IndianOil is exploring CCUS deployment in high-emission units and collaborating across sectors to establish CO_2 transport and storage infrastructure, reinforcing its long-term commitment to decarbonisation and sustainable energy transition.



At the Panipat Refinery, CO_2 from PSA off-gas in hydrogen production is being channelled into third-generation ethanol production, reducing emissions and converting CO_2 into green fuel. This technology not only enhances capture efficiency but also lowers the energy required for regeneration. This is India's First 3G Ethanol plant having a capacity of 128 KLPD.

IndianOil inks MoU with Oil India Ltd (OIL)

IndianOil and OIL have signed a non-binding MoU to collaborate on CCUS as part of efforts to support India's transition to a low-carbon economy. Under this, IndianOil will deploy CCUS technology for capture of CO_2 from flue gas stacks produced at our Digboi refinery operations to support Enhanced Oil Recovery at Oil India's fields. This pilot project highlights the use of CCUS as a key strategy for reducing emissions and fostering innovation.

Key innovation

IndianOil is advancing decarbonisation through CCUS technologies, supported by R&D in chemical, biochemical, and electro bio-catalytic CO_2 capture methods. A key innovation is eCO_2Sorb, an enzyme-assisted solvent-based technology that captures 94–96% CO_2 while reducing energy use for regeneration with a large-scale demonstration currently underway at a fertiliser plant.

National Accolades

IndianOil's innovative eCO_2Sorb technology won accolades at the FIPI Oil & Gas Awards 2023, in the Carbon Capture Utilisation & Storage (CCUS) category, in FY 2024-25.

Air Emissions: Smart Refineries and Clear Horizons

IndianOil recognizes the impact of its business operations on air quality and the need for addressing this issue as an aspect of climate change and for preservation of human health.

Our complex refining activities contribute to the release of significant air emissions, including flue gases emitted from boilers, heaters, fluidized catalytic cracking (FCC) generators, and fugitive emissions. The major pollutants released during these activities include volatile organic compounds (VOCs), sulfur oxides (SOx), nitrogen oxides (NOx), particulate matter (PM), and hazardous air pollutants (HAPs) such as benzene and formaldehyde.

In meeting other regulatory requirements, IndianOil adheres to the National Ambient Air Quality Standards (NAAQS). IndianOil routinely conducts comprehensive assessments of air emissions across facilities and refineries to track non-GHG pollutants, ensuring effective identification, tracking, and monitoring of their sources. To support continuous monitoring, we have implemented a real-time "Monitoring Van," which measures air emissions by analyzing contaminant concentrations and volumetric gas flow rates.

IndianOil employs a range of advanced systems to monitor emissions across operations. All refinery stacks are equipped with online analyzers that provide continuous data, which is directly transmitted to the Central Pollution Control Board (CPCB) servers for real-time monitoring and compliance. Moreover, at our marketing installations, we ensure that all contracted vehicles possess valid Pollution Under Control (PUC) certificates, which are regularly verified as part of our commitment to maintaining stringent emission standards.

8.91%

Y-O-Y decrease in SOx emissions

Emission Reduction Initiatives

Offering cleaner fuels

Promoting the use of biofuels and bioenergy, supporting R&D, and advancing cleaner alternatives such as green hydrogen

Reducing Operational emission

Adopting advanced practices and technologies to cut down emissions generated from internal operations

Reduce fugitive emissions

Strict Leak detection and Repair measures; installation of Vapour Recovery Systems across all retail outlets

Reduce fuel transport emissions

Promoting road transport that relies on cleaner fuels and enhancing the pipeline network to minimize emissions

Methane Abatement

Methane abatement is a critical strategy in reducing greenhouse gas emissions, given methane's high impact on global warming. At IndianOil, the primary sources of methane emissions are unburnt hydrocarbon leaks from flare stacks and fugitive emissions. Several measures have been taken to minimize methane emissions and enhance operational sustainability.

Fugitive emissions from storage tanks

IndianOil limits methane emissions through continuous Leak Detection and Repair (LDAR) monitoring, double-sealed storage tanks (per MoEF&CC norms), and regular LNG tanker maintenance to prevent leaks and boil-off gas losses.

Leakage/losses from pipeline transport of Natural Gas

Operational parameters in pipelines are monitored using SCADA systems, Leak Detection Systems, and other advanced technologies to ensure safety, efficiency, and early detection of leaks.

LNG Terminal

The Ennore LNG terminal is equipped with a Boil-off Gas (BOG) system, including a compressor and re-condenser, to capture and re-liquefy natural gas, minimizing emissions and product loss.

Methane abatement through Compressed Biogas (CBG)

IndianOil is setting up 30 Compressed Bio-Gas (CBG) plants to promote clean energy and waste-to-wealth solutions.

Fugitive emissions in wastewater collection and treatment

Volatile Organic Compounds (VOC) recovery systems are installed at key locations to minimize emissions and improve air quality.

Bio-methanation units to minimise methane emissions from canteen waste

Organic waste is routinely directed to organic waste converter units for eco-friendly processing and disposal.

LNG road transportation

IndianOil uses LNG unloading pumps at satellite stations to minimize gas loss during LNG loading and unloading operations.

Fugitive emissions from refineries

Refineries maintain an inventory of equipment leaks through quarterly monitoring under the LDAR programme, conducted with the support of an external agency.

Water Efficiency: Making the Most of a Scarce Resource

India is a highly water stressed country, with almost 600 million people experiencing high to extreme water stress, according to the NITI Aayog. Water management is vital for our business continuity and for safeguarding our licence to operate. Every facet of IndianOil's operations—from refining and petrochemical production to pipeline transportation and retail distribution, depends on regular supplies of high-quality water.

To clearly map out our water-related challenges, we continuously assess and review water impacts and risks. IndianOil has adopted a holistic water management approach that focuses on:

1. **Optimizing water use**
2. **Minimizing wastewater generation**
3. **Promoting reuse and recycling across our refineries.**

Optimizing water use

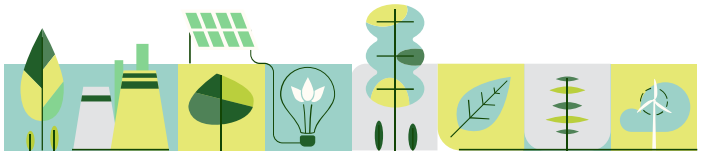
Water is a shared resource, and its responsible use directly determines our relations with our communities, thereby safeguarding our long-term prospects and licence to operate. Given the water-intensive nature of our refinery operations, IndianOil faces significant challenges in water-stressed areas such as our refineries at Mathura, Vadodara and Panipat as well as our pipeline and marketing operations. Water scarcity in these regions not only impacts operational continuity but also elevates the importance of water stewardship within IndianOil's sustainability strategy. IndianOil maintains internal water efficiency targets and ensures that all wastewater discharges meet or exceed applicable national regulatory standards. Periodic water assessments are undertaken at multiple operational locations.

Given such criticalities, we are constantly focused on enhancing water-use efficiency and recycling and reusing treated wastewater from operations. We deploy advanced water-saving technologies at our refineries and plants with the object. Further, we regularly monitor the quality of our water discharge and effluent discharge. Our wastewater discharge is monitored through our quality management systems. We also track our freshwater consumption through our water utility bills. By introducing such water saving technologies, we are continuously reducing our operational water consumption and costs, thereby strengthening our resilience against adverse water situations, and embedding robust water stewardship practices within our production value chain.

As part of our water stewardship efforts, we actively engage with local communities and stakeholders to promote sustainable water use practices. In water-stressed regions, we collaborate with local authorities and residents to strengthen watershed management and support initiatives aimed at protecting and restoring aquatic ecosystems.

Zero Liquid Discharge

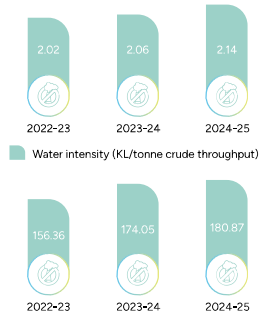
Zero liquid discharge (ZLD) systems have been implemented at 228 across our operations covering a wide range of facilities including: R&D, one cryogenics plant, 9 lube plants, 6 AFS, 11 Admin offices, 109 terminals, and 91 LPG bottling plants.



152.92 billion litres
Total Water Consumption

117.30 billion litres
Freshwater Withdrawals

39.8 billion litres
Treated wastewater recycled back into operations



Rainwater Harvesting at IndianOil

IndianOil has adopted a comprehensive approach to rainwater harvesting through the installation of rainwater harvesting (RWH) structures and watershed projects across our installations.

The deployment of percolation ponds for rainwater harvesting at our Digboi Refinery has led to a substantial decrease in freshwater consumption, demonstrating the tangible impact of industrial water management.

Another key intervention that we have rolled out is the installation of a Storm Water Management System (SWMS) for the treatment and reuse of rainwater. This system is designed to manage heavy surface runoff effectively, minimize the risk of waterlogging in low-lying areas within refinery premises, and optimize the use of harvested rainwater for non-potable applications. We are also expanding our water conservation footprint by initiating the installation of rooftop rainwater harvesting systems across all government primary and secondary schools in Vadodara district.

Promoting water reuse and recycling

Our refineries are consistently advancing water conservation efforts through a combination of reuse and recycling of treated water, rainwater harvesting and stormwater conservation. This reflects our strong commitment to responsible water stewardship.

As part of our integrated ESG risk assessment framework, water risks are regularly monitored and reported to ensure alignment with sustainable business practices. With several refineries situated in water-stressed regions, we are actively advancing the use of recycled water in place of freshwater. In alignment with the Task Force on Climate-related Financial Disclosures (TCFD), water risk identification forms a key component of IndianOil's climate resilience strategy. The corporation also remains vigilant to regulatory developments, continuously updating internal processes and issuing necessary guidelines to ensure operational compliance and resource sustainability across our value chain as well.

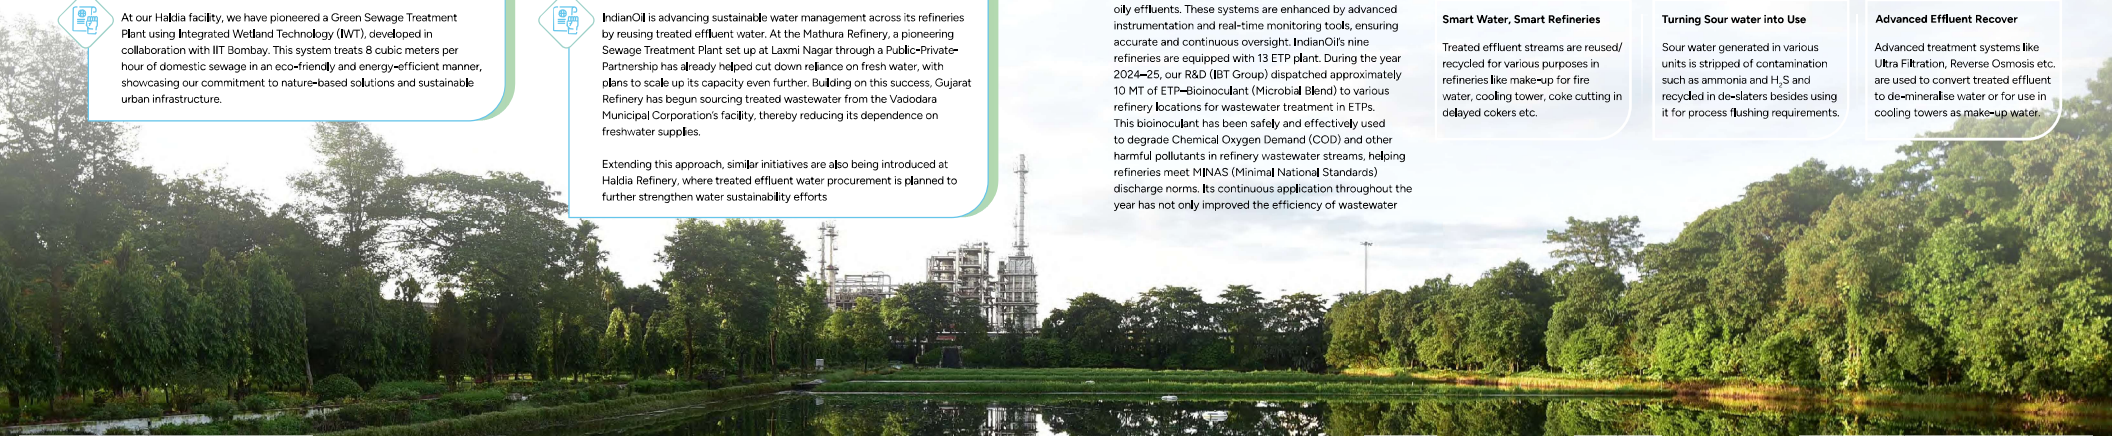
Innovative Green Infrastructure

At our Haldia facility, we have pioneered a Green Sewage Treatment Plant using Integrated Wetland Technology (IWT), developed in collaboration with IIT Bombay. This system treats 8 cubic meters per hour of domestic sewage in an eco-friendly and energy-efficient manner, showcasing our commitment to nature-based solutions and sustainable urban infrastructure.

Reuse of Treated Effluent Water at Refineries

IndianOil is advancing sustainable water management across its refineries by reusing treated effluent water. At the Mathura Refinery, a pioneering Sewage Treatment Plant set up at Laxmi Nagar through a Public-Private-Partnership has already helped cut down reliance on fresh water, with plans to scale up its capacity even further. Building on this success, Gujarat Refinery has begun sourcing treated wastewater from the Vadodara Municipal Corporation's facility, thereby reducing its dependence on freshwater supplies.

Extending this approach, similar initiatives are also being introduced at Haldia Refinery, where treated effluent water procurement is planned to further strengthen water sustainability efforts



Efficient wastewater management practices at IndianOil

Wastewater recycling enables us to treat and utilize wastewater for various purposes, serving as vital resource for refineries situated in water stressed areas. The wastewater streams are thoroughly treated in advanced Effluent Treatment Plants (ETPs), which employ a combination of physical, chemical, and biological processes. The ETPs are equipped with cutting-edge technologies such as Tilted Plate Interceptors (TPI), Dissolved Air Flotation (DAF) systems, bio-towers, activated sludge basins, and dual media filters for handling oily effluents. These systems are enhanced by advanced instrumentation and real-time monitoring tools, ensuring accurate and continuous oversight. IndianOil's nine refineries are equipped with 13 ETP plant. During the year 2024–25, our R&D (IBT Group) dispatched approximately 10 MT of ETP–Bioinoculant (Microbial Blend) to various refinery locations for wastewater treatment in ETPs. This bioinoculant has been safely and effectively used to degrade Chemical Oxygen Demand (COD) and other harmful pollutants in refinery wastewater streams, helping refineries meet MINAS (Minimal National Standards) discharge norms. Its continuous application throughout the year has not only improved the efficiency of wastewater treatment but also contributed to reducing freshwater consumption and lowering CO_2 emissions by enabling greater reuse of treated water within refinery operations. Furthermore, wastewater discharge is only done in compliance with mandatory government approvals and guidelines, thereby ensuring zero negative impact on the environment, communities and ambient ecosystems.

Wastewater Reuse

Through consistent efforts our refineries now reuse 89% of wastewater significantly easing the demand for fresh water.

Optimizing Water Usage

Smart Water, Smart Refineries

Treated effluent streams are reused/ recycled for various purposes in refineries like make-up for fire water, cooling tower, coke cutting in delayed cokers etc.

Turning Sour water into Use

Sour water generated in various units is stripped of contamination such as ammonia and H_2S and recycled in de-slaters besides using it for process flushing requirements.

Advanced Effluent Recover

Advanced treatment systems like Ultra Filtration, Reverse Osmosis etc. are used to convert treated effluent to de-mineralise water or for use in cooling towers as make-up water.

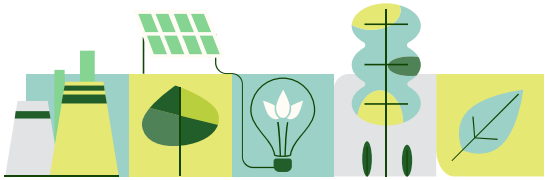
Waste management: Reclaiming value, Protecting Resources

IndianOil has been tailoring its practices and processes to minimize environmental harm. We have designed a comprehensive waste management strategy that aligns with our complex operations in refining, petrochemicals, and fuel distribution. Likewise, our waste management practices operate right across the production value chain – from refining to end-product manufacture and include rigorous waste segregation techniques. We strictly adhere to the directions of the Central Pollution Control Board (CPCB) and State pollution Control Boards (SPCB), E-Waste Management and Handling Rules, 2010, and other waste management protocols.

In-situ bioremediation of legacy sludge using agents developed through in-house R&D

Gujarat refinery is setting new benchmarks in sustainable waste management with its pioneering in-situ bioremediation initiative for legacy sludge disposal. The refinery had sludge that covered approximately 5,000 m^2, with a volume of around 21,000 m^3. The sludge consisted of accumulated oily waste that had collected over a long period and consisted of a mixture of hydrocarbons, heavy metals, chemicals, and other contaminants. The sludge's heavy nature made conventional disposal methods ineffective, as authorised vendors struggled to manage its safe removal. In-situ bioremediation using bacteria developed through IndianOil's in-house R&D significantly reduced the disposal challenges. The method is cost-effective, sustainable, and minimises impact on surrounding ecosystems and provides direction for future management of legacy sludge.



Waste Management Approach

While we manage both hazardous and non-hazardous waste, a lot of our R&D efforts and innovative technologies are deployed for the former category. IndianOil has been successful in discovering several eco-friendly ways of remediating the different categories of hazardous waste that are generated from our production processes. Likewise, we recycle or dispose of non-hazardous in keeping with 5R best practices or the guidelines issued by the government. These variety of waste categories and treatment methods are represented below:

Hazardous Waste

E-Waste
IndianOil follows the E-Waste Management and Handling Rules, 2010 and any revisions. The E-waste is sold to authorised recyclers or collected under repurchase agreements by equipment providers.

Spent Catalyst
Spent catalysts containing precious metals are routed to authorized recyclers for the recovery of valuable metals, utilized for co-processing in cement plants, supplied to manufacturers of refractories and ceramics.

Oily Sludge
Oily sludge generated at IndianOil refineries is treated using 'Oilivorous-S', a bioremediation technology developed by IndianOil's R&D Centre.

Battery Waste
Battery waste is disposed via registered recyclers who operate with buy-back policies.

Slop Oil
Slop oil collected from storage tanks and Effluent Treatment Plant (ETP) facilities in refineries is treated to recover oil, which is subsequently processed in storage tanks for water removal.

Non-hazardous Waste

Plastic Waste
Abiding to EPR on recycling of plastic waste, we incorporate recycle materials from consumer waste into our processes to decrease reliance on plastic packaging.

Ferrous Scrap and Other Recyclables
The Metal Scrap Trade Corporation manages the disposal of these items, adhering to standard procedures.

Organic Waste
Organic waste at IndianOil locations is converted into compost or biogas using biogas or organic waste converter units, with more than 100 units currently operating.

Paper Waste
We have engaged with designated recyclers to provide stationery items in return for the collection of wastepaper.

Integrating Circularity into Core Business Functions

IndianOil is committed to fostering a circular business model through the implementation of 5R framework principles of refuse, reduce, reuse, repurpose and recycle. These principles are deeply embedded in IndianOil's ethos, aligning our activities with regulatory requirements and values of environmental stewardship. Within our refining and petrochemical businesses, we have implemented targeted measures to reduce material losses, recover valuable by-products, transform waste streams and improve both energy and water efficiencies. As an ethical and ecologically responsible producer we fulfil our Extended Producer Responsibility.

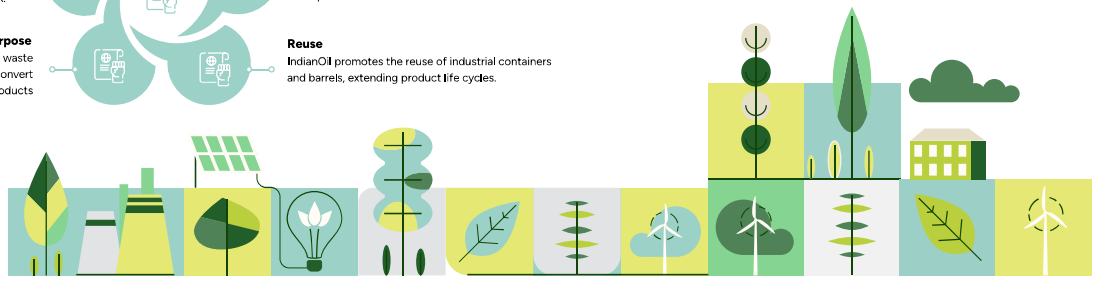
Refuse
IndianOil is actively exploring alternatives to single use plastics in packaging and operations aiming to prevent plastic waste generation at source

Recycle
Through advanced chemical recycling initiatives, IndianOil transforms end-of-life plastics into valuable petrochemical feedstock.

Reduce
By optimizing packaging design and material use, IndianOil minimizes plastic consumption across product lines.

Repurpose
IndianOil is innovating by repurposing plastic waste and collaborated with stakeholders to convert reclaimed plastic waste into useful products

Reuse
IndianOil promotes the reuse of industrial containers and barrels, extending product life cycles.



Extended Product Responsibility

IndianOil has been given Extended Producer Responsibility to undertake recycling of plastic waste, lubricant and petrochemicals. We successfully met our Extended Producer Responsibility (EPR) target for plastic packaging by reclaiming plastic waste equivalent to 100% of the plastic used in our lubricant packaging.

CYCLOPLAST- Driving Circular Economy

As a commitment to circular economy, in 2022 we launched "Cycloplast" brand. Demonstrating our commitment to sustainable packaging, the CYCLOPLAST initiative has achieved a key milestone with the approval of its r-HDPE RBHD015 Black grade. This recycled material is now being used at a 30% blend with virgin resin in the moulding of SERVO Gas Engine Oil containers.

Durapack: Packaging for Greener Tomorrow

Reinforcing its commitment to environmental care, IndianOil launched Durapack a new, eco-conscious packaging for its Durapave bitumen brand. In this innovative format, 25 kg of bitumen is sealed in a specially designed polybag placed inside a cubic corrugated carton, which can be directly dropped into mixing plants, ensuring cleaner handling and reduced waste. These efficient and ecofriendly products have also been setting up the stage for the circularity leadership.

Preserving Biodiversity across operational footprint

At IndianOil, we acknowledge the potential impact of our operations on biodiversity and local ecosystems. As a company operating in a hard-to-abate sector, IndianOil leverage nature-based solutions such as afforestation and ecological restoration to enhance biodiversity and contribute to its decarbonization efforts. Biodiversity is also addressed within our risk management framework and is an integral part of our materiality assessment. Oversight of the biodiversity commitment, as a part of our ESG roadmap, is provided at a broader level by our Board of Directors This comprehensive commitment ensures responsible stewardship and minimises ecological impact throughout our value chain. We aspire to achieve No Net Loss & Net Positive Impact through preserving ecological balance and adopting a multi-pronged approach to minimize the ecological footprint of our activities. In line with our commitment to environmental stewardship, we avoid activities near biodiversity zones and hotspots and work closely with our value chain partners, including suppliers and regulatory bodies, to uphold these standards. We are dedicated to preventing deforestation and fostering positive environmental outcomes. As part of our long-term sustainability agenda, we have launched afforestation initiatives, which are already yielding encouraging results. This target is overseen by our Senior Management.

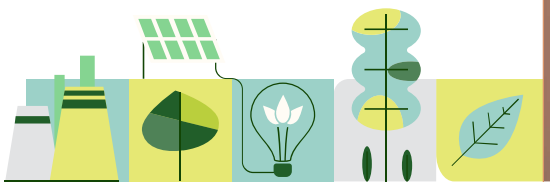
We have ongoing initiatives to restore, preserve and protect the environment, ecosystems and dependent flora and fauna. These include extensive tree plantation at all our facilities, mangrove rewilding, miyawaki plantations, wildlife conservation. Green belt development is a key feature of IndianOil's installations, with larger land area under native plantations, leading to significant carbon sequestration and ecosystem preservation. These initiatives reflect our commitment to business growth aligned with ecological protection, ensuring that our operations contribute positively to the resilience and sustainability of surrounding ecosystems.

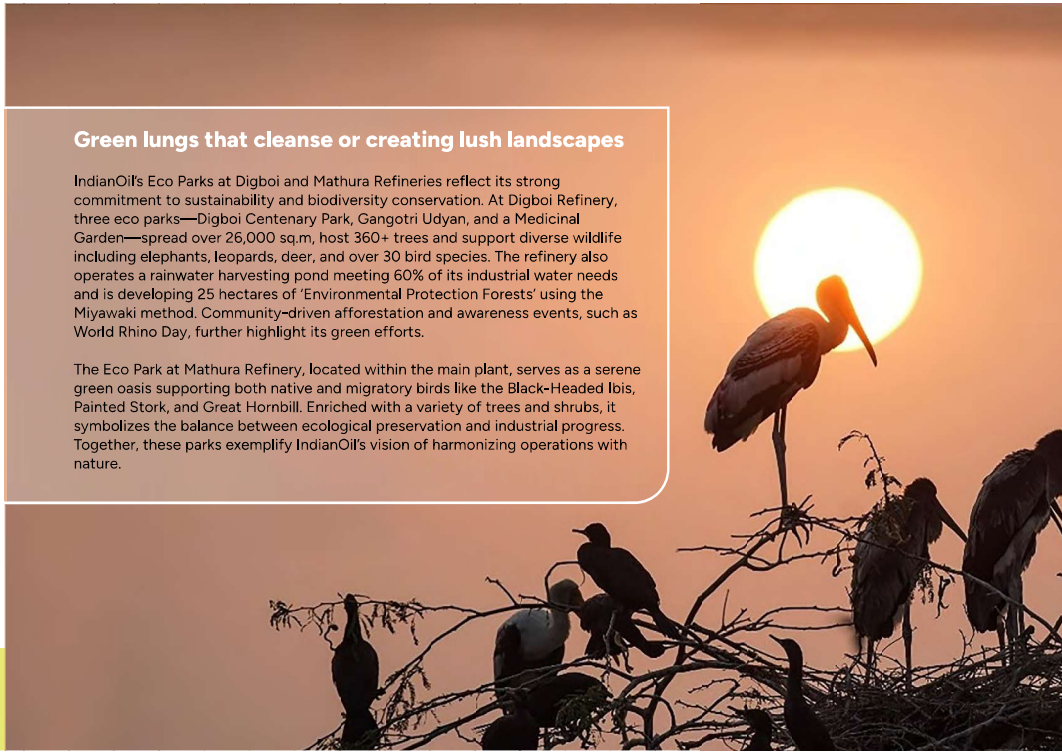
We are progressively aligning our environmental strategies with the Taskforce on Nature-related Financial Disclosures (TNFD) framework, recognizing the importance of integrating nature-related risks and opportunities into business decision-making. This alignment supports our broader commitment to biodiversity conservation, sustainable resource use, and long-term value creation.

Biodiversity Risk Assessment

IndianOil takes a proactive approach to assessing and mitigating biodiversity risks by embedding ecological considerations into project planning, design, and execution. Comprehensive biodiversity risk assessments are carried out, particularly in proximity to ecologically sensitive areas such as forests, wetlands, mangroves, and wildlife corridors, using tools like GIS mapping, ecological field surveys, and expert consultations. As part of the Environmental Impact Assessment (EIA) process, IndianOil engages with relevant stakeholders prior to the commencement of any new project to assess the scope of potential impacts, associated risks, and stakeholder perceptions. This participatory approach enables a comprehensive understanding of local ecological sensitivities and supports the integration of effective mitigation measures. By proactively involving communities, regulatory authorities, and environmental experts, IndianOil is better equipped to minimize adverse effects on biodiversity and ensure that project planning aligns with both environmental and social consideration.

IndianOil is a member of the Ministry of Environment, Forest and Climate Change's (MoEFCC) 'India Business & Biodiversity Initiative (IBBI)', which serves as a national platform for businesses to exchange knowledge, foster collaboration, and integrate the sustainable management of biological diversity into their core operations.





Green lungs that cleanse or creating lush landscapes

IndianOil's Eco Parks at Digboi and Mathura Refineries reflect its strong commitment to sustainability and biodiversity conservation. At Digboi Refinery, three eco parks—Digboi Centenary Park, Gangotri Udyan, and a Medicinal Garden—spread over 26,000 sq.m, host 360+ trees and support diverse wildlife including elephants, leopards, deer, and over 30 bird species. The refinery also operates a rainwater harvesting pond meeting 60% of its industrial water needs and is developing 25 hectares of 'Environmental Protection Forests' using the Miyawaki method. Community-driven afforestation and awareness events, such as World Rhino Day, further highlight its green efforts.

The Eco Park at Mathura Refinery, located within the main plant, serves as a serene green oasis supporting both native and migratory birds like the Black-Headed Ibis, Painted Stork, and Great Hornbill. Enriched with a variety of trees and shrubs, it symbolizes the balance between ecological preservation and industrial progress. Together, these parks exemplify IndianOil's vision of harmonizing operations with nature.

62 Lakhs

Green belt

Nature-based solutions (NbS)

IndianOil has been actively engaged in large scale tree plantation drives with a focus on conserving biodiversity, promoting sustainable ecosystems, and improving air quality. Tree plantation activities are often scheduled to coincide with significant environmental events like World Environment Day and Van Mahotsav, thereby promoting awareness among employees and stakeholders. As a result of our consistent efforts over many years, today our operational facilities are also verdant enclaves helping to nurture native species, providing shelter to a variety of bird, animal and marine species and propagating biodiversity.

Increasing green cover through the Miyawaki Plantation method

IndianOil has been using the Miyawaki Plantation afforestation method to create fast-growing tree cover. At many of our facilities, we have deployed this fast-growing mini forest technique to completely transform barren land into thriving green zones. Unlike conventional plantations, the Miyawaki method emphasizes biodiversity, rapid growth, and minimal maintenance once established.

Ecosystem Management Efforts

Wildlife Conservation
- Rhino Adoption
- Cheetah Restoration Project
- Elephant Rehabilitation Centre

Afforestation
- Tree Plantation in Green Belt/Eco-parks
- Miyawaki Plantation

Valuing Marine ecosystem
- Protecting Olive Ridley Turtle Population
- Translocation of Coral Reef at Vadinar

Terrestrial Biodiversity
- Biodiversity benchmarking through EIA studies
- Thriving Flora & Faunain IndianOilgreenbelts

Protecting Coastlines
- Mangrove & Casurina Plantation along coasts

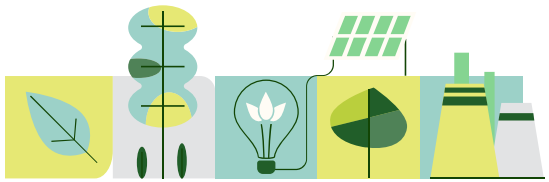
CASE STUDY

Restoration and afforestation of degraded forest

As a part of a hard-to-abate sector, IndianOil has been actively pursuing several decarbonisation routes. To incentivize companies that take definitive action towards environmental and social good, the Ministry of Environment, Forest, and Climate Change (MoEFCC), Government of India, has launched India's first Green Credit Programme (GCP), launched incentivizes companies for the positive environmental actions they take to meet their compensatory afforestation targets or for reporting under ESG leadership indicator or under the corporate social responsibility (CSR) mandate. In this way, the GCP scheme helps hard-to-abate sectoral players quantify the actual scale of work done and earn other benefits for the efforts made.

The GCP programme proposes eco-restoration-cum-tree plantation on degraded forest land. To achieve our decarbonisation goals, the company has already blocked 12,659 hectares under 278 plantation blocks spread across 10 States in India. The work of eco-restoration and afforestation is directly managed by the respective State Forest Departments, which acts as the actual implementation agency, along with Indian Council of Forestry Research and Education (ICFRE) which operates as the GCP Administrator. IndianOil aims at kicking off this initiative across 21 plantation blocks covering 1077.01 hectares spread across four states, and a sum of Rs. 56.02 crores have already been released for this.

The GCP is expected to create a comparable and normative platform for undertaking ESG actions and is likely to streamline Net Zero target realisation. IndianOil hopes to significantly accelerate our Scope 1 and 2 emissions reduction journeys through this means.



CASE STUDY

Rewilding mangroves to mitigate damage caused by severe cyclones

IndianOil has undertaken one of the most ambitious ecological restoration projects in the Indian energy sector through its large-scale Mangrove Plantation initiative at Beliari Char and Dakshinchar, part of the Sundarbans, located in the Bay of Bengal. This mangrove ecosystem is home to a diverse array of wildlife, including saltwater crocodiles, deer, and various bird species.

In response to the increasing vulnerability of coastal regions to cyclones and tidal surges, the refinery launched Mangrove Plantation 2.0, India's largest mangrove plantation drive among refineries, during its Golden Jubilee celebrations. This initiative aims to plant 30 lakh mangroves across 150 hectares, adding to the 20 lakh saplings already established in earlier phases. These plantations act as natural barriers, reducing erosion, safeguarding biodiversity, and protecting nearby communities from the adverse impacts of climate change.

IndianOil's major wildlife conservation initiatives

IndianOil, one of India's largest energy companies, integrates environmental conservation into its core operations, with a strong focus on protecting biodiversity and wildlife. Our approach to wildlife conservation goes beyond habitat preservation. We are committed to wildlife conservation and biodiversity preservation through the restoration and protection of natural habitats and ecosystems.

Project Cheetah: As part of IndianOil's commitment to biodiversity and environmental stewardship, we have partnered with the National Tiger Conservation Authority (NTCA) to support Project Cheetah—a pioneering initiative aimed at reintroducing cheetahs to Indian soil after decades of local extinction. Through sustained support, the project has witnessed encouraging outcomes, including a notable increase in cheetah populations, marking a significant step forward in India's wildlife conservation landscape.

Rhino Adoption: IndianOil has launched a dedicated Rhino Adoption Programme to protect and support the critically endangered Indian one-horned rhinoceros. Recognizing the ecological importance and cultural significance of this iconic species, IndianOil has adopted rhinos in zoological parks across several Indian states. By supporting these efforts, IndianOil not only enhances the survival prospects of the Indian rhino but also helps raise public awareness about the importance of biodiversity conservation.

Tiger Conservation: Recognising the critical role of tigers in maintaining ecological balance, IndianOil—through its Haldia Refinery—has actively partnered with the Sundarbans Tiger Conservation Foundation Trust (STFCT) to strengthen conservation efforts in the Sundarban Tiger Reserve, the world's largest mangrove habitat. The support focuses on enhancing patrolling and surveillance operations, helping prevent poaching and human-wildlife conflicts in a highly sensitive and ecologically significant region.

Elephant Rehabilitation: In collaboration with Wildlife SOS, IndianOil has supported the establishment of a state-of-the-art Elephant Rehabilitation Centre in Mathura, Uttar Pradesh. This centre offers comprehensive care to rescued elephants—many of whom were victims of abuse, forced labour, or human-wildlife conflict. The project underscores the importance of compassion in conservation and aligns with IndianOil's broader mission to promote coexistence and sustainable development.

Turtle's Protection: IndianOil has partnered with the Wildlife Departments of Tamil Nadu and Odisha to protect the Olive Ridley Turtle, a species listed as vulnerable on the IUCN Red List. Through its support, IndianOil enables on-ground conservation teams to safeguard nesting habitats, conduct awareness campaigns, and ensure safe migration during breeding seasons. This effort not only helps conserve marine biodiversity but also empowers coastal communities to adopt sustainable and turtle-friendly practices.

Further details on these initiatives can be found in 'Bird's Eye view'

Mission LiFE

The Lifestyle for Environment (LiFE) initiative, launched by the Government of India, is a global call to action that encourages individuals and institutions to adopt environmentally conscious behaviours. It urges people to align their lifestyles with the principles of ecological balance, urging a transition to habits that conserve energy, reduce waste, and promote biodiversity. Through this initiative, individuals are encouraged to become "Pro-Planet People", with care for the Earth being their primary stimuli for action. As the movement gains momentum globally, it reinforces the idea that lasting environmental change begins with everyday choices made by people across all walks of life.

IndianOil continued to champion Mission LiFE during 2024–25, reinforcing the vision of sustainable lifestyles at both individual and collective levels. The initiative focused on inspiring communities, employees, and customers to make conscious choices that reduce environmental impact. Efforts ranged from large-scale awareness drives and community participation programmes to initiatives promoting resource efficiency and responsible consumption. By embedding sustainability into daily practices, IndianOil is helping transform Mission LiFE into a movement of collective climate action.

Spreading Awareness

- Retail outlets showcased sustainability messages through displays and signage.
- Grassroots events like street plays directly involved citizens in sustainability actions.

Promoting Energy Efficiency

- LED bulbs and efficient cookstoves distributed to cut household energy use.
- Awareness sessions shared practical tips for saving energy.

Driving Green Cover and Citizen Participation

- Plantation and seed-ball drives expanded green cover with community support.
- Over 100,000 saplings distributed in NCR to promote citizen-led greening.

Enabling Circular Economy

- Reverse vending and cloth bag machines installed at high-footfall locations.
- Waste segregation and recycling promoted through local campaigns.

Community Conversations for Conservation

- Expert talk by Rajendra Singh engaged 1,100+ participants on water issues.
- Community-driven water conservation and resource management emphasized.

Innovation for Impact

- 'SUSTAIN-A-THON 2024' engaged 35,000+ people in sustainability solutions.
- Youth mobilized through 'Speak Up for the Planet 2.0' contests and campaigns.

Strengthening our Value Chain

Material Topics Aligned

- Product Stewardship & Customer Satisfaction
- Sustainable Supply Chain
- Climate adaptation, resilience and transition
- Environmental Impact

> IndianOil scaled new heights in 2024–25 with record refining throughput, extensive pipeline & marketing network and highest-ever petrochemical & natural gas sales. With massive infrastructure upgrades, digitalised operations and cleaner fuel logistics, the Company is reinforcing its core while gearing up for a low-carbon future.

Highlights 2024-25

35,874	20,000+ KM	13,614	₹1,067 Crores	19.1%	1,809	42.17%
Total RO's solarized	Pipeline network	EV Charging Stations	expenditure on R&D and major innovation initiatives	Ethanol blending achieved during ESY	Number of patents filed	Materials procured from MSME vendors

IndianOil's value chain is integral to our role as a national energy provider—extending from upstream sourcing and refining to last-mile distribution across the country. Each link in this chain is built for resilience, scale, and responsibility, enabling us to deliver energy securely and sustainably. Our upstream operations are being steadily optimized through local procurement, energy efficient Very Large Crude Carriers (VLCCs), and a modal shift in logistics from road to pipelines and inland waterways. These steps are complemented by fleet modernization and smarter route planning to reduce fuel consumption and emissions.

Our downstream infrastructure is anchored by one of the world's largest pipeline networks and a nationwide distribution system that includes terminals, storage facilities, and a vast network of retail outlets. Digital integration enables real-time inventory control, fuel tracking, and efficient delivery to urban and rural customers alike. We continue to embed sustainability into retail operations by solarizing fuel stations, deploying energy-efficient appliances, and transitioning outlets into integrated energy hubs.

As a key contributor to India's clean energy future, IndianOil is advancing alternative fuel pathways including compressed biogas (CBG), ethanol, sustainable aviation fuel, and green hydrogen. We are also scaling up our natural gas and City Gas Distribution (CGD) network, alongside support for electric mobility infrastructure. These initiatives complement our broader strategy to decarbonize the value chain through cleaner fuels, green logistics, and ESG integration in supplier engagement.

Guided by responsible procurement supply chain governance, we are investing in technologies that enhance transparency, resource efficiency, and traceability. Our end-to-end value chain transformation is aligned with national priorities such as Atmanirbhar Bharat and India's Net Zero ambitions—positioning IndianOil to deliver on the energy needs of today, while building the sustainable systems of tomorrow.

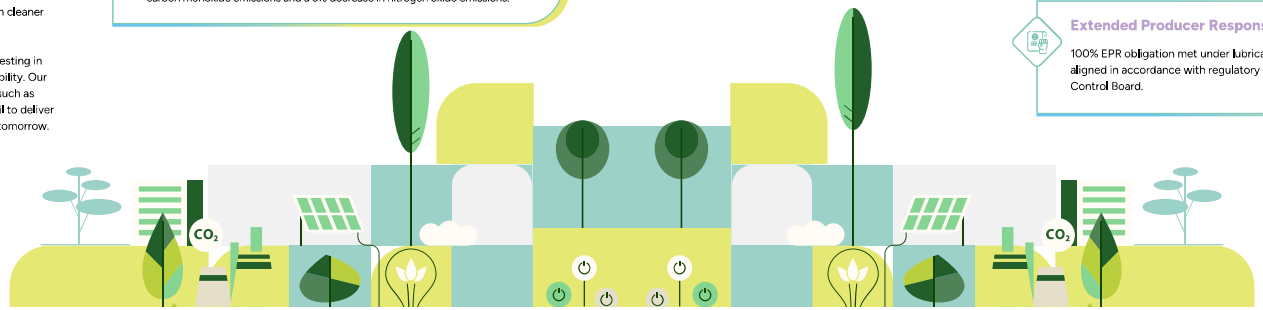
Low Carbon Product Stewardship

Our low-carbon product stewardship approach hinges on reducing the environmental impact of our offerings across their lifecycle, from sourcing and formulation to marketing and end-use.

Our new launches namely XP100, XP95, XtraGreen diesel, XtraTej, Propel, E20 and Ethanol 100 are all low-carbon products with lower emissions impact that cater to evolving consumer consciousness and environmental needs. Further, our performance products like XTRABOOST and STORM-X demonstrate our commitment to both efficiency and environmental responsibility.

XtraGreen-Greening Mile by Mile

IndianOil's XtraGreen tackles the pollution concerns of conventional diesel with its higher cetane number leading to better combustibility and lower Particulate matter (PM) emissions. XtraGreen enhances fuel economy by 5–6% and ensures smoother combustion with lower noise levels. It results in approximately 12% reduction in carbon monoxide emissions and a 5% decrease in nitrogen oxide emissions.



Lubricants

We continue expanding our SERVO range of energy-efficient lubricants that help to significantly reduce oil consumption through better resistance to residue deposits across all engine types. SERVO Greenmile is designed to reduce CO_2 emissions by upto 10% and is also BS-VI compliant. This next-generation product thus helps to support the auto industry's push towards eco-friendly choices.

In recent years, our lubricant R&D has increasingly focused on bio-based and synthetic formulations, the use of advanced additive technologies, and the incorporation of circular economy principles. We have pioneered the introduction of lubricants containing re-refined base oils, blended with virgin materials to maintain product integrity while promoting responsible waste oil management

Our range of eco-friendly Lubricants

- **Servo 4T Green** — Eco-friendly lubricant for motorcycles, made with re-refined base oils
- **Servo Tractor Green** — Sustainable performance lubricant tailored for agricultural tractors
- **Servo Greenmile** — Low-emission lubricant for petrol engines, promoting cleaner drives
- **Servo Raftaar** — High-efficiency diesel engine oil with recycled content for greener mobility

Extended Producer Responsibility

100% EPR obligation met under lubricant sales (used oil recycling). The waste collection plan is aligned in accordance with regulatory requirements and is regularly submitted to the Pollution Control Board.

Natural Gas

Natural gas continues to play a central role in IndianOil's diversified energy portfolio, aligning with the Government of India's ambition to increase the share of natural gas in the national energy mix from 6% to 15% by 2030. We are expanding our presence across the entire natural gas value chain—spanning across sourcing, transportation, distribution, and marketing. Our objective is to improve accessibility and affordability across industrial, commercial and residential sectors.

Through our joint ventures, such as IndianOil Adani Gas Pvt. Ltd. (IOAGPL), and collaborations with GAIL (India) Limited—including Green Gas Limited—we are steadily expanding our footprint in the City Gas Distribution (CGD) segment, leveraging shared infrastructure and marketing synergies to serve India's growing clean energy demand.

To ensure long-term energy resilience and supply security, IndianOil is signing long term sale and purchase agreement with various international players to meet India's rising demand, which is expected to grow by 60% by 2030.

IndianOil is also extending its LNG reach in the Southeast Asia region with a pioneering cross-border LNG trade agreement with Nepal. These strategic initiatives underscore IndianOil's vision for natural gas to contribute significantly in its overall business by 2040, while reinforcing its role as a catalyst for regional energy cooperation and sustainable economic growth.

Bio-energy

IndianOil is positioning bioenergy as a vital component of its clean energy transition, harnessing agricultural residues, municipal waste, and other biomass resources to produce sustainable fuels. By advancing projects in 2G ethanol, compressed biogas, and next-generation biofuels, the company is reducing its carbon footprint while promoting circular economy practices.

Ethanol

IndianOil has marked a pioneering achievement with the establishment of both 2G and 3G ethanol production facilities at our Panipat refinery. This is the world's first third-generation ethanol plant which utilizes refinery off-gases like carbon monoxide, carbon dioxide and hydrogen to produce ethanol, using our partner's proprietary fermentation technology. The initiative underscores IndianOil's commitment to circular economy principles and carbon reduction. Alongside this, the state-of-the-art 2G ethanol plant is designed to process agricultural residues.

19.1%
Ethanol Blending Achieved (ESY)

National Accolades

IndianOil has been honoured with the prestigious **Biodiesel Association of India Award** for achieving the **highest biodiesel blending** in the country. This recognition reinforces IndianOil's leadership and unwavering commitment to advancing India's biofuel revolution.

The introduction of E20 and ETHANOL 100 fuels at retail outlets is catalyzing the transition to a flex-fuel ecosystem. This shift is enabling automobile manufacturers accelerate the rollout of flex-fuel vehicles (FFVs), capable of running on gasoline, ethanol, or any combination of the two—demonstrating ethanol's potential to emerge as a mainstream, low-emission fuel alternative within India's mobility landscape.

Benefits from Bio-energy

Farmer income enhancement
Provides an additional revenue stream to farmers through biomass supply.

Carbon footprint reduction
cuts GHG emissions by replacing conventional fossil fuels with renewable alternatives.

Support to net-zero goals
aligns with national climate commitments by decarbonising transport and industry.

Agricultural residue utilization
Converts crop residues and organic waste into valuable fuel, reducing stubble burning

Energy security
lowers dependence on imported fossil fuels by producing indigenous clean energy

Waste-to-energy innovation
promotes circular economy by transforming waste into sustainable fuels.

Rural employment
generates local jobs in biomass collection, logistics, and plant operations.

Compressed Biogas (CBG)

CBG is a renewable, ecofriendly fuel produced through the anaerobic digestion of organic waste such as agricultural residue, cattle dung, municipal solid waste and biomass. We are actively promoting CBG under the Government of India's SATAT (Sustainable Alternative Towards Affordable Transportation) initiative that aims to create an ecosystem for productive use of biomass for CBG production and its integration with transport infrastructure. IndianOil has set up 44 CBG plants till date under the SATAT initiative.

In FY 2024-25, IndianOil achieved CBG sales of 8.9 TMT, with a 14.1% year-on-year growth, reflecting rising market adoption and the success of our bioenergy initiatives.

Scaling-up CBG infrastructure

In FY 2024-25, a 200-TPD and 300-TPD mixed waste-to-CBG plant has been set up in Gorakhpur, Uttar Pradesh and Namakkal, Tamil Nadu, respectively. Additionally, two 100-TPD cattle dung-to-CBG plants have been set up in Jaipur, Rajasthan and Gwalior, Madhya Pradesh. These initiatives promote greater circularity, economic value creation and energy equilibrium from farm waste.

Sustainable Aviation Fuel (SAF)

Sustainable Aviation Fuel (SAF) has a critical role to play in decarbonising the aviation sector. At IndianOil we are actively aligning refining capabilities, research expertise, and strategic partnerships to scale up SAF production across the country. Through multiple partnerships with stakeholders, we have taken a key step towards establishing India's first commercial-scale SAF production facility in Panipat, with a planned capacity of 86.8 TMTPA. The plant will employ Alcohol-to-Jet (ATJ) technology, a proven and scalable solution that converts bioethanol, a renewable feedstock, into jet fuel. This route not only generates a sustainable fuel alternative but also delivers carbon intensity reductions, supporting India's broader climate commitments. Furthermore, the incubation and development of such capabilities creates a bright future for India as a regional hub for sustainable aviation fuel production.

IndianOil has entered into a strategic partnership with Praj Industries Limited to establish a 50:50 Joint Venture Company. This will further strengthen our SAF and biofuels portfolio as the JV will focus on developing and operating a diversified network of biofuel plants across India. These plants will produce SAF as well as other advanced biofuels such as ethanol, compressed biogas (CBG), biodiesel, and bio-bitumen, leveraging a wide range of indigenous and waste-based feedstocks.

IndianOil and Air India MoU for SAF supply

IndianOil signed a landmark MoU with Air India for the long-term supply of Sustainable Aviation Fuel (SAF), aimed at reducing the carbon footprint of air travel. This collaboration represents a decisive step in advancing low-carbon aviation and demonstrates the shared commitment of both organisations to India's energy transition and global climate objectives

ISCC CORSIA Certification for SAF

IndianOil became the first Indian company to receive ISCC CORSIA certification for the production of SAF at its Panipat Refinery. This globally recognised certification, granted under ICAO's Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA), validates IndianOil's ability to produce SAF that meets stringent international lifecycle carbon emission reduction standards.

Green Hydrogen

IndianOil is building a robust hydrogen infrastructure, in support of India's Hydrogen Mission, spearheading pilot projects to mainstream hydrogen use in refining, heavy transport, and power sectors. To achieve our objective, we are utilizing both in-house innovation, external collaborations and field observations under varied climatic conditions.

We have already deployed 15 green hydrogen fuel cell buses in collaboration with Tata Motors, in the Delhi NCR region and Vadodara. We also showcased our hydrogen mobility leadership at Indian Energy Week 2025, where our zero-emission buses transported dignitaries, including ministers from India and Qatar. More information on our initiatives can be found in the Environment section of this report.

60,000 KM
Test run achieved in hydrogen mobility

Transforming transportation through Sustainable E-mobility

Effecting a large-scale adoption of electric mobility lies at the center of India's Energy Transition goals and IndianOil is a key enabler of this vision. We have been actively leveraging our retail and distribution network for installation of e-charging points that can support the seamless operation of electric vehicles.

Battery Swapping Station

Energizing the Transition: Battery-as-a-Service

IndianOil is rapidly expanding its footprint in the electric mobility sector and as a part of its forward-looking strategy, we are now intensifying efforts in battery-swapping technologies. A joint venture company, Indofast Swap Energy Pvt. Ltd. (ISEPL), was established in collaboration with Sun Mobility, Singapore, to provide Battery-as-a-Service (BaaS) solutions for small-format electric vehicles in India, utilizing advanced batteries, charging stations, and related infrastructure. During 2024-25, 222 Quick Interchange Stations (QIS) were added, expanding the network to 865 QIS.

Revitalizing our Retail Network

IndianOil is strengthening its downstream operations through focused sustainability interventions across its retail and pipeline infrastructure. Our pipeline network is being enhanced with digital integration and strategic storage facilities to improve fuel transport efficiency, reduce emissions, and support cleaner logistics. These efforts contribute to reliable and low-carbon distribution across geographies.

At the retail end, energy-efficient measures such as LED lighting, solarisation, and smart automation are being implemented across fuel stations. These initiatives align with our commitment to decarbonisation, resource efficiency, and clean energy delivery.

Greening the value chain with RO solarisation

IndianOil continues to lead by example through its widespread solarisation initiative across its retail network as India accelerates its clean energy transition.

During FY 2024–25, we made significant strides by solarising 4,227 additional Retail Outlets (ROs), covering over 90% of our nationwide network. This large-scale deployment of decentralized solar systems is one of the most ambitious initiatives in the Indian downstream energy sector, helping us offset a substantial portion of our electricity consumption from conventional sources.

Together, these efforts reflect our dual commitment to sustainability and customer-centricity — greening our retail footprint while offering innovative, reliable, and clean energy solutions at every point of service

Pipeline Transportation: Promoting Sustainable Logistics

Pipeline transportation continues to be a cornerstone of IndianOil's commitment to operational efficiency, emissions reduction, and long-term sustainability. As the most energy-efficient mode of large-scale fuel transport, pipelines enable us to significantly reduce carbon emissions, lower logistics costs, and enhance safety across our supply chain.

In FY 2024–25, IndianOil's extensive pipeline network maintained a robust carrying capacity of 129.92 MMTPA for crude oil and petroleum products, and 49.4 MMSCMD for natural gas. This network not only ensures uninterrupted fuel supply across the country but also contributes meaningfully to our efforts in decarbonizing the energy value chain.

To support India's Net-Zero 2070 ambitions and the Government's Hydrogen Mission, IndianOil is actively working to future-proof its pipeline infrastructure:

- Hydrogen-Ready Pipelines: We are preparing to adapt our natural gas infrastructure for hydrogen transport. The Dadri–Panipat spur line has been identified for India's first hydrogen transportation pilot. The 6.4-km, 6" diameter pipeline has undergone internal cleaning and bi-directional pigging, and has been equipped with in-house fabricated PIG launcher and receiver, setting the stage for hydrogen readiness assessment.
- Global Collaboration: To build technical capabilities for hydrogen transport, IndianOil has partnered with Snam SpA of Italy, a global leader in gas infrastructure. This collaboration aims to evaluate the retrofitting of existing pipelines and enable the safe and efficient transportation of hydrogen across the country.

Research and Innovation: Driving Innovation and Incubating the Sustainability Shift

IndianOil, research and innovation are central to our strategy of leading India's energy transition and reinforcing our position as an integrated, future-ready energy company.

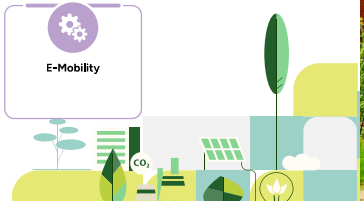
Taking a collaborative approach, we continue to develop partnerships with academia, global technology leaders and start-ups to further our energy transition goal. IndianOil is investing in world-class R&D infrastructure that will help such associations fructify and gain momentum, creating a strong innovation pipeline in our focus areas for intervention.

IndianOil: Energy Excellence Award 2025

IndianOil R&D was honoured with the prestigious Energy Excellence Award 2025 by Hemtech Foundation at the Oil, Gas and Power World Expo in Mumbai. This esteemed recognition celebrates IndianOil R&D's groundbreaking contributions to refining technologies and our pioneering advancements in alternative energy solutions, reaffirming our position at the forefront of innovation in the energy sector.

Key Focus Areas of R&D

- Refining Technologies & Catalysts
- Alternative Energy
- Applied Metallurgy & Tribology
- Petrochemicals and Polymers
- Bio-Energy
- IndS_UP StartUp Scheme
- Pipeline Maintenance & Inspection
- Nanotechnology
- Lubricants
- Fuels & Additives
- E-Mobility



Net Zero Campus

We are setting up the world's largest net-zero (power & water) R&D campus, adhering to GRIHA-5 Star and LEED Platinum green building standards. Spread across 60 acres, this state-of-the-art facility—backed by a strategic investment of ₹3,200 crore—is envisioned as a global hub for clean energy innovation and technology scale-up.The campus will also house Centers of Excellence (CoEs) dedicated to priority thematic areas of national relevance, namely in alternative and renewable energy, corrosion research, nanotechnology and synthetic biology. These centers will play a pivotal role in accelerating the transition from lab-scale R&D to commercial deployment, ensuring swift adoption of transformative technologies across the energy value chain.

Capex towards R&D (₹ Crore)

1,689
Total number of patents granted

1,809
Total number of patents filed

₹1,067 Crores
expenditure on R&D and major innovation initiatives

IndianOil launched several groundbreaking products based on in-house R&D:

Premium ASA

Premium ASA is a metalfree, conductivity improving antistatic additive package for diesel fuel, which helps reduce the chances of electricity discharge during fuel transfer and transport

Servo Futura eV Grease

Servo Futura eV Grease is an in-house, specially formulated electric vehicle grease which uses Organic Polyurea Thickener Technology and imparts 3-5 times more service life than conventional grease and reduces noise.

Servo Futura eV Trans 75W-90:

Servo Futura eV Grease is an in-house, specially formulated electric vehicle grease which uses Organic Polyurea Thickener Technology and imparts 3-5 times more service life than conventional grease and reduces noise.

i-ZN22

Inspired by nature's molecular precision, i-ZN22 is a revolutionary polypropylene catalyst utilising i-MagNIP, a magnesium precursor, based on pioneering chemistry with unprecedented sub-nano level control resulting in structural perfection and exceptional performance.

Nanokoat-I

This is a two component epoxy-based nano-additised, formulation for protecting against corrosion under insulation and has superior thermal barrier properties, ensuring longer operational life, reduced maintenance cost, and improved sustainability.

eCO2 Sorb Technology

Developed by IndianOil R&D, eCO2 Sorb is an advanced enzyme-assisted solvent-based CO_2 capture technology. It combines patented thermostable enzymes with optimized solvents to enhance CO_2 absorption efficiency by over 2x while reducing energy consumption by 25-30% during regeneration. The technology enables >90% CO_2 capture at lower temperatures, improves operational stability, minimizes solvent degradation, and is scalable for various high-emission industrial sectors.

Chhotu Master

Chhotu Master is a safe, high-efficiency cooktop designed for IndianOil's lightweight LPG cylinders 'Chhotu' and 'Munna'. Tested and certified by the LPG Equipment Research Centre, it offers >68% thermal efficiency, fits directly on cylinders without hoses or regulators, supports up to 20 kg load, and provides a cost-effective, reliable alternative to unsafe unapproved cooktops.

Strengthening our Value Chain through our Supplier Network

At IndianOil, suppliers are more than vendors—they are strategic partners and a vital extension of our value chain. From crude procurement and refining inputs to engineering services, logistics, and retail infrastructure, our suppliers enable us to deliver energy solutions reliably, responsibly, and at scale. Ensuring transparency, inclusion, and sustainability in supplier engagement is fundamental to strengthening the resilience and integrity of our value chain.

Transparent and Compliant Sourcing

IndianOil's procurement processes are governed by Government of India policies and best practices, including Central Vigilance Commission (CVC) and Department of Public Enterprises (DPE) guidelines. Our digital e-Procurement system—integrated with the Government e-Marketplace (GeM)—enables transparent, efficient, and rule-based supplier selection across a wide range of procurement categories. Whether through open tenders or nomination-based sourcing for proprietary items, we ensure fairness and integrity at every stage.

All suppliers undergo rigorous due diligence covering financial capacity, technical expertise, quality standards, and ESG performance. Compliance with IndianOil's General Conditions of Contract—including an Integrity Pact—is mandatory, reinforcing ethical conduct, legal compliance, and responsible labor and environmental practices across our value chain.

Integrity Pact & Ethical Procurement

All suppliers working with IndianOil must commit to the Integrity Pact (for tender of the threshold value of ₹10 crore and above) a tool developed in collaboration with Transparency International. This pact ensures:

- Ethical business conduct
- Zero tolerance for corruption
- Commitment to labor rights and environmental standards
- Fair and transparent bidding processes

Fostering Inclusion in the Value Chain

We are committed to building a supplier base that reflects India's social diversity and economic priorities. In line with the Public Procurement Policy, we have institutionalised inclusive sourcing targets of 25% total procurement from Micro and Small Enterprises (MSEs) out of which, 4% is from SC/ST-owned MSEs and 3% from women-owned MSEs.

To promote equitable participation, IndianOil offers MSEs exemptions from tender fees and Earnest Money Deposits (EMD), along with price preference during evaluations. We also support Indian start-ups and emerging vendors by relaxing pre-qualification norms and issuing trial orders for non-critical items, nurturing future-ready value chain partners.

Under the Make in India initiative, we restrict global tenders for procurements below ₹200 crore without competent authority approval—prioritizing domestic capabilities and self-reliance.

94.45%
procurement from suppliers in India

42.17%
total procurement from MSMEs

4.03%
procurement from SC/ST MSEs

3.21%
procurement from women owned MSEs

100%
Value chain partners assessed for health & safety and working conditions

Engagement and Capacity Building

A robust value chain depends on mutual understanding and capability alignment. IndianOil regularly conducts awareness sessions, vendor development programmes (VDPs), and pre-bid meetings to educate suppliers—especially MSEs—on procurement procedures, compliance expectations, and tendering processes. In FY 2024–25, over 82% of registered vendors participated in ESG and procurement related sessions conducted by us.

We also collaborate with the Ministry of MSME, National Small Industries Corporation (NSIC), and other bodies to host regional supplier meets and promote digital platforms such as GeM, Trade Receivables Discounting System (TReDS), and its e-Procurement portal. These initiatives aim to streamline onboarding, reduce entry barriers, and enhance participation across the value chain especially for small and emerging vendors.

Sustainability in Supplier Relationships

As IndianOil advances toward net-zero operational emissions by 2046, embedding ESG across our value chain has become a core priority. ESG screening is applied during vendor registration and tendering, particularly for high-impact categories. Our vendor selection process integrates social, ethical, and environmental criteria through a transparent tendering system. Tenders mandate compliance with child labour prohibition, worker welfare, and environmental standards to ensure responsible sourcing.

As per our contractor agreement, all contractors and vendors must comply with our commitments and submit a declaration prior to commencing the tender process. This ensures that our vendors agree to our ESG requirements, promoting transparency throughout the process. Certifications such as ISO 9001, ISO 14001, and ISO 45001/OHSAS 18001 are required for specific categories. For large and high-risk contracts, EHS criteria are embedded in prequalification and evaluation, aligned with OISD (Oil Industry Safety Directorate), BIS (Bureau of Indian Standards), and other regulatory norms. In line with our stakeholder-centric approach, we regularly engage with stakeholders through ESG training sessions, technical assistance programmes, and ongoing dialogue to address their challenges and encourage the adoption of best practices. We also organise awareness initiatives and health check-up camps to support the well-being of contract labourers, individuals working in transport and distribution networks, and frontline personnel. The implementation of the supplier ESG program is overseen by Board directors. IndianOil also conducts audits and inspections of major suppliers to assess quality, safety, and sustainability performance. Corrective action plans are enforced where gaps are found. ESG compliance expectations extend to contractors, transporters, dealers, and frontline partners—reinforcing a culture of responsible business across our end-to-end value chain. Suppliers who do not comply with the ESG criteria outlined in the internal checklist within the given timeframe may face penalties and be placed on holiday listing (blacklisted). IndianOil mandates vendors and suppliers to declare no use of child labor and strictly enforces a zero-tolerance policy for forced labor, human trafficking, and harassment

Sustainability in Supplier Evaluation

- ESG screening at vendor registration and tendering stages
- ISO 9001, 14001, 45001 certifications for applicable suppliers
- HSE audits and site inspections for high-risk vendors
- Alignment with OISD, BIS, and other regulatory standards

Responsible Marketing and Product Labelling

IndianOil is committed to upholding the highest standards of responsible marketing and product labelling, ensuring transparency, regulatory compliance, and customer awareness. All our products conform with Bureau of Indian Standards (BIS) specifications, and labelling undergoes rigorous testing as per Company-defined standards for quality, readability, and durability. Clear safety instructions and usage guidelines are prominently displayed on all product packaging to promote safe and informed usage.

To build customer trust and operational resilience, we engage in regular outreach activities including product demonstrations, workshops, and awareness campaigns for consumers and channel partners. LPG distributors and sales officers conduct safety clinics to build awareness and reinforce safe handling practices at the last mile. In these ways, we also strengthen our customer relationships.

CASE STUDY

Sustainable Packaging through Cycloplast

IndianOil's Cycloplast initiative reflects our commitment to plastic neutrality. Under this initiative, we supply high-quality recycled plastic granules sourced from post-consumer waste for production of packaging for our products. Adhering to stringent quality and traceability standards, Cycloplast supports compliance with India's Plastic Waste Management (PWM) Rules, which mandate 10–30% recycled content in packaging from 2025–26. IndianOil ensures responsible labelling practices that clearly communicate recycled content, empowering consumers to make informed choices. This initiative not only reduces dependence on virgin plastic but also strengthens partnerships with lubricant OEMs seeking sustainable packaging solutions

Innovation at a Glance: Start-Up Support by IndianOil

We foster innovation by forming strategic partnerships with premier academic and research institutions, including the IITs. Through collaborative research projects, we aim to bridge the divide between theoretical knowledge and practical application. Our support extends to innovation hubs and incubators, offering startups and researchers the resources needed to develop and commercialize cutting-edge technologies.

- Start-Up Focus: Support for transformative innovations in renewables, carbon capture, digitalization, and sustainability
- Support Offered: Financial aid, technical mentorship, and R&D infrastructure access
- Flagship Scheme: Green Resolve – Amrit Kaal Adhyay (launched 2023)
  - Up to ₹30 crore funding
  - Incubation and proof-of-concept validation
  - Zero royalty on disbursed funds
- Ecosystem Building: Collaboration with academia, industry, and early-stage entrepreneurs for tech piloting and commercialization

UN SDGs Aligned

Highlights 2024-25

- **29,941** Number of total employees
- **2,663** Women employees in workforce.
- **27.27%** Women in the Board
- **1%** Attrition rate
- **₹583 Crores** CSR expenditure
- **33.51** Average hours per employee of training and development
- **₹180 Crores** Spent on learning and development of employees
- **Zero** Fatalities of employees

Central to our social responsibility is the generation of shared value, demonstrating our commitment to driving economic growth that also delivers real benefits to society. We firmly believe that shared value goes beyond the simple redistribution of profits or mitigation of negative impacts; it is about creating meaningful, positive outcomes that support not only our business and employees but also the broader community. We create shared value by empowering our workforce, enhancing our focus on health and safety, prioritising customer-centricity, and investing in the development of local communities.

Our employees are vital to our ongoing growth and success, playing a key role in helping us adapt to evolving technologies and business models. Our customer-centric approach drives us to deliver exceptional value while prioritising sustainable solutions that meet the evolving needs of the market.

We remain fully cognizant of the significant role that we play as the leading oil refining and marketing company for the world's fastest growing economy. IndianOil and our employees remain fully dedicated to realizing the ambitions of 1.4 billion Indians as we chart the journey of progress towards a better life and greater prosperity.

Enabling Talent for a Sustainable Future

Our people are integral to our business success. As IndianOil leads the clean energy transition, we rely on our people and their commitment to continuous learning, innovation, and sustainability to achieve our goals. All employees are of Indian nationality, representing 100% of our workforce. Our employees help us build our competitive advantage and deliver on our commitments to our customers. We invest in core human capital priorities — attracting, engaging, developing, and retaining employees, as our employees enable our current and future successes.

Employee Turnover Ratio

	2022-23	2023-24	2024-25
Male	5.69%	5.92%	4.86%
Female	5.61%	5.03%	5.07%

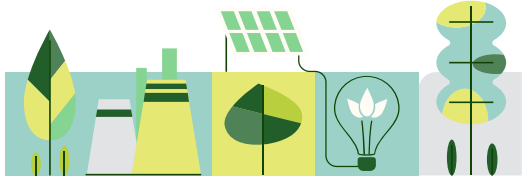
Employee Training & Development

IndianOil prioritises employee training and development to equip our workforce with the necessary skills for both personal and professional growth. We remain the first Public Sector Undertaking (PSU) in India to achieve Level 3 of the People Capability Maturity Model. We also provide comprehensive training programmes focusing on industry's best practices, leadership development, safety standards, technical training and sustainability practices. Our initiatives ensure that employees are not only aligned with current market needs but are also equipped to adopt sustainable practices within the energy sector. Through continuous learning, we empower our workforce to drive innovation and uphold environmental stewardship across our operations.

Skill Enhancement Training Programmes

Training needs are evaluated with input from employees, as well as their reporting and recommending officers. Based on the needs identified through the training needs, executives are assigned functional, cross-functional, and behavioral training for the forthcoming year. Furthermore, we were able to deliver a variety of training programmes across all management levels. At IndianOil, we provide continuous learning opportunities throughout the year, covering functional, behavioral, statutory, and technical skills, all supported by flagship programmes that foster leadership at every level. Training programmes for junior management primarily concentrate on functional skills, whereas those for middle and senior management focus on leadership and team building. On an average, IndianOil spent ₹60,134 per employee on training and development.



33.51 hours

Learning, Growth and Development

- **Orientation Training Programme:** Offered to transferred employees and newly inducted officers to facilitate their adaptation to new roles and responsibilities.
- **Junior Executive Development Programme:** Designed specifically for officers promoted from staff positions to ensure a seamless transition and ongoing development.
- **Company-sponsored MBA / Part-time MBA Programmes:** Sponsored full or part-time MBA programs for 100% of eligible employees, supporting their skill development and qualification enhancement.
- **Comprehensive Divisional Induction Modules:** Specifically designed to familiarize new recruits with the Company's operations, values, and culture, facilitating a smooth onboarding experience.
- **OEM/Licensor training:** Ensured junior-grade officers remain updated on the latest technologies and industry best practices to enhance their performance and professional growth.
- **Seminars and Symposiums:** Employees are given the opportunity to attend seminars and symposiums both in India and internationally, broadening their knowledge and skills.

Employee Development Programmes

We have introduced a wide-ranging set of employee development programmes to promote a culture of continuous learning and enhance the skills of our workforce. We offer a diverse range of training initiatives aimed at enhancing employee skills and supporting their continuous growth, reinforcing our commitment to sustainable development and capacity building. All training programs are supported by dedicated coaches and mentors who possess specialized expertise in their respective zones. Depending on the training type, sessions are delivered via webcasts and internal video presentations, accessible to employees through our Learning Hub. Some sessions are also offered through Employee Resource Groups for targeted engagement.

- **Nav Urja Niman Program:** Towards achieving Net Zero goals, we are upskilling our existing employees in new energy areas. For this, we have introduced Nav Urja Niman program, targeting leaders at two levels. For junior to mid-level executives, the program focuses to develop project execution and operational skills amongst participants, through 20 days of training. For senior executives, the program is designed to develop strategic planning and decision making in new energy areas, through a three-day, in-person intervention

- **Digital Skills Development Program- "Daksh":** A training program on new technologies in Variable Frequency Drives (VFDs), covering their operation, maintenance, and design. This training offers a holistic understanding of VFD technology, components, design, operation & maintenance, and industry best practices. The program is extensively delivered across all regions of the Pipelines Division.

- **Culture Education Program**: A three-day training program centered on professional etiquette, workplace ethics, effective communication, and social intelligence. It aims to enhance participants' professional conduct with a focus on business communication and emotional intelligence. Focused sessions are offered on diversity management and gender sensitization cover gender roles, unconscious biases, stereotypes, the POSH Act, and the Internal Complaints Committee's role in maintaining a safe workplace.

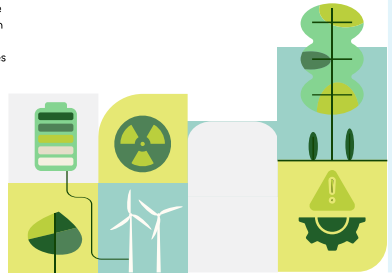
- **Employee Transition Program:** IndianOil offers various programs specially designed for retired employees and their spouses, aimed at supporting a successful transition into retirement. These programs emphasize the importance of proactive retirement planning, with a strong focus on financial preparedness. They also encourage participation in social and welfare activities post-retirement to promote mental and physical well-being.

- **Madhyama:** Implemented a compulsory two-week training program for mid-career executives, equipping them with the essential skills and knowledge to address future industry challenges.

- **Abhigyan Corporate Mentoring System including Reverse Mentoring:** Facilitated a training program for mid-career executives to equip them with essential skills for meeting evolving industry demands.

Upskilling in AI

In order to keep our qorkforce future ready, IndianOil regularly conducts training on Artificial Intelligence.



Performance Management System

IndianOil implemented performance management procedures not only to offer feedback and evaluations, but also with the aim of helping employees identify areas for improvement, gain recognition for their efforts, and be rewarded for their achievements. Our e-performance management system (e-PMS) tracks employee competencies and performance ratings, facilitating data-driven decisions for assignments and promotions. An appraisal is carried out annually for each employee. We utilise a comprehensive leadership competency framework, which includes a variety of appraisal methods, such as:

- **360-Degree Feedback Exercise:** The 360-degree feedback process is designed to provide relevant feedback to executives from their peers, subordinates, and superiors. At IndianOil, we carry out 360-degree feedback annually as part of the yearly performance review cycle.

- **Management by objectives:** At IndianOil, Management by Objectives (MBO) is a key component of our performance appraisal process. This approach focuses on setting clear, measurable goals for employees, ensuring alignment with organisational objectives. Regular evaluations are conducted to assess progress, provide feedback, and recognise achievements.

Additionally, we enable employees to engage directly with the Chairman via our 'Connect2Chairman' portal, promoting open communication and feedback.

Connect To Chairman

- **Team-based performance:** This appraisal mechanism is an integral part of our evaluation process. This approach encourages collaboration and assesses the collective achievements of teams, fostering a sense of shared responsibility. It ensures that both individual contributions and team dynamics are recognised and rewarded.

- **Agile conversations:** Agile Conversations as a dynamic approach to performance appraisal. These regular, informal discussions allow for real-time, enabling employees to adapt and improve continuously. This fosters a more flexible, responsive environment where performance is nurtured through ongoing dialogue rather than annual reviews alone.

100%

of our permanent workforce is covered under Performance Management System

Employee Engagement

Employee engagement is central to our satisfaction survey process. We regularly conduct surveys to gather valuable insights on employee experiences, satisfaction levels, and areas for improvement. This feedback-driven approach allows us to create a more positive and supportive work environment, fostering greater engagement and retention. Driven by the desire to engage with our employees, we regularly seek their suggestions and feedback to enhance our practices. We continued inclusion of creativity and innovation in the workplace through initiatives such as Festival of Ideas and related suggestion drives.

Employee Engagement Surveys

We frequently conduct employee satisfaction surveys to regularly assess and enhance the work environment. The most recent survey was conducted for the FY 2024-25 across the entire Pipeline Division. Moving forward, we are committed to use each survey by making annual investments in our employees' training, career development, and ensuring they are fairly compensated for their dedication and hard work.

Employee Well-being & Benefits

Employee well-being is a cornerstone of our sustainability efforts at IndianOil. We recognise that a healthy, motivated workforce is essential for achieving long-term organisational success. By prioritising mental, physical, and emotional well-being, we foster a supportive work environment that not only enhances productivity but also aligns with our commitment to sustainability and corporate responsibility.

We place a strong emphasis on the well-being and future security of our employees. All eligible officers and staff members receive a comprehensive statutory benefits package, which includes life insurance, healthcare coverage, parental leave, provident fund contributions, gratuity, a post-retirement medical benefit scheme, resettlement allowance, ex-gratia payments, and various recognition initiatives. Additionally, we provide benefits that surpass statutory requirements, including two weeks of paid leave for non-primary caregivers, 180 days of maternity leave, as well as on-site childcare and crèche facilities. Furthermore, flexible working hours are available at selected locations, including the administrative office, and creche facilities are provided at plant locations and administrative offices in accordance with applicable guidelines. Separate, dedicated lactation rooms are available for women at our facilities to support the needs of nursing mothers. Furthermore, we also present 'Long Service Awards' to our employees at the group level, with rewards based on the length of service completed.

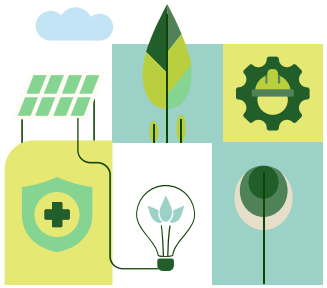
We offer regular health and safety training, annual health check-ups, flexible working hours, and a pension scheme with post-retirement medical benefits. Resettlement benefits are provided upon retirement, and employees are given a 21-day notice period prior to any major operational changes. Contract workers are also included under "Pradhan Mantri Jeevan Jyoti Bima Yojana", and "Pradhan Mantri Suraksha Bima Yojana."

Additional Benefits Provided

1. Benefits to Differently Abled Employees: Reservation in recruitment; Conveyance allowance, medical equipment; Special training on accessibility; Provision of barrier- free access; Preference in terms of posting; Social security benefit; Provident Fund/Gratuity.
2. Benefits to OBC/SC/ST Employees: Relaxation in recruitment; SC/ST cell; Grievance Redressal Mechanism.
3. Benefits to Female Employees: Maternity benefit (180 days' leave); Childcare benefits (up to 2 years leave); Husband joining leave.

Benefits

1. Benefits: Medical assistance to employees; Support to transfer in/out employees; Township/company quarters; Transit accommodation.
2. Work Environment: Canteen facilities; Facilities at workplace; Guest house.
3. Belongingness and Development: On boarding; Learning & development; Career growth & progression; Resolution of grievances;
4. Esteem, Aspiration and Recognitions: Holiday home; Sanction of loans & advances; Organisational culture



Workforce Diversity

IndianOil aims to cultivate a culture of success that honors diversity, strives for fairness, promotes inclusion, and ensures our workforce mirrors the consumers and communities we support. Diversity, equity, and inclusion (DE&I) are crucial to IndianOil's operations. We do not discriminate on the basis of race, gender, caste, religion, or disabilities, and we recruit individuals based on their skills and qualifications.

Our recruitment policy is frequently reviewed and properly authorised by the relevant authority to encourage diversity and inclusion. We ensure that no discrimination takes place by following DEI principles and adhering to all applicable government regulations aimed at safeguarding and promoting diversity. Embracing diversity and appreciating varying perspectives allows our workforce to achieve their full potential. Diverse teams create a sense of belonging and inspire ideas that generate shared value. IndianOil is committed to upholding fair and ethical labor practices across its operations and extended value chain. The company ensures payment of a living wage to all employees, including contractual workers and partners, in line with statutory norms and internal welfare benchmarks. It actively avoids excessive working hours by enforcing regulated shift patterns and setting clear maximum working hours. IndianOil also promotes equal remuneration, ensuring men and women receive equal pay for equivalent roles across all functions. All employees are entitled to paid annual leave, with statutory benefits such as maternity, paternity, and sick leave. These labor commitments are embedded not only within core operations but also extended to contractors and partners, reinforcing IndianOil's inclusive and responsible approach to workforce management. IndianOil's labor practices commitment covers its core operations, corporate offices, contractual workforce, and entire supply chain, ensuring fair wages, working conditions, and equal treatment across all internal and external stakeholders. We champion inclusion across our organisation and encourage all employees to maintain an open-minded approach. Our capacity to attract, develop, and retain a diverse range of talented individuals is essential to remaining competitive and driving growth. Moreover, we support the right to collective bargaining, promoting a harmonious environment by recognising a single union at each location. This approach has been highly effective, with approximately 93% of our permanent workforce represented by various unions and employee associations.

IndianOil's Labor Practices Programs are designed to uphold fair, safe, and inclusive working conditions across its operations and supply chain. The company ensures wages meet or exceed cost-of-living benchmarks, with 100% of the workforce receiving at least the statutory minimum wage. Regular engagement with employee representatives is institutionalized through structured forums to review workplace conditions and ensure effective grievance redressal.

Prioritising Women

At IndianOil, we place a strong emphasis on empowering women within our organisation and the communities we serve. By fostering a diverse and inclusive work environment, we aim to provide equal opportunities for women in all areas of our business. Through our various initiatives that promote skill development, leadership roles, and work-life balance, we strive to create a more equitable and sustainable future for women, driving both social impact and business growth. In 2024-25, IndianOil welcomed 1,080 new employees, with women making up 6.39% of these hires, advancing our focus on building a diverse workforce.

We have maintained our efforts to ensure that performance appraisals for female executives who take maternity leave are impartial. Their ratings will be reviewed at the corporate level across all departments. The Chairman will act as the final authority for any such cases. Women represent 25% of our board of directors, reflecting our ongoing commitment to gender diversity and inclusion. Additionally, we have prioritised childcare, maternity leave, and other benefits to offer greater flexibility in achieving a healthy work-life balance for our female employees.

International Women's Day 2025:
Embracing the global theme of 'For All Women and Girls: Rights, Equality, Empowerment', IndianOil marked International Women's Day 2025 with a stirring celebration at New Delhi. As the voices of IndianOil's women leaders echoed through the auditorium, one message stood out - empowerment isn't just about opportunities, it's about creating a future where inclusion is the norm, not the exception.

Celebrating International Women's Day

7.24% Women in top management positions

10.35% Women in middle management positions

11.19% Women in junior management positions

10.69% Women in all management positions

Aarohi 7.0: Empowering the Next Generation of Women Leaders

IndianOil's commitment to gender inclusivity is exemplified through Aarohi, our flagship Women Leadership Development Programme. Continuing this tradition, Aarohi 7.0 was launched in FY 2024–25 to nurture high-potential women officers in middle management (Grades E & F), preparing them to take on future leadership roles within the organization. Since its inception, the programme has mentored 114 officers across six batches.

Through Aarohi, IndianOil continues to invest in building a more inclusive, empowered, and future-ready leadership pipeline that reflects our values of diversity, equity, and excellence.

Health & Safety for All

IndianOil is committed to ensuring the health, safety, and well-being of its employees through a robust Health, Safety, and Environment (HSE) framework. Our focus is on promoting both physical and mental well-being, preventing occupational illnesses, and mitigating workplace hazards that could affect employee health. To safeguard the health and well-being of its employees, IndianOil has implemented clear policies and procedures for Occupational Health and Safety, alongside comprehensive guidelines for related matters. Alongside ensuring the safety of our employees, we also protect our contractors, suppliers, assets, and the environment through a comprehensive safety management approach. The highest standards of occupational health and safety (OHS) are applicable across all our operations.

Health & Safety Management Systems

A clearly established Safety Management System is implemented at all locations across every division of the Corporation. An Occupational Health and Safety Management System is in place, compliant with The Factory Act, 1948, OISD standards, PESO rules, and various regulations. Our locations uphold ISO certifications, ensuring quality, safety, and sustainability across operations. Certifications include ISO 9001, ISO 14001, ISO 14064, ISO 41001, ISO 27001, ISO 45001 etc. We are passionately striving to achieve zero employee and worker fatalities in 2025-26.

100% refineries and petrochemical plants are ISO 45001:2018 certified

The company's HSE Management System is built upon a comprehensive set of systems and processes designed to ensure the highest standards of safety and environmental responsibility.

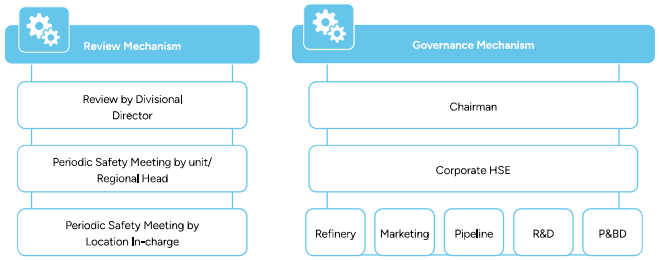
- H, S&E Leadership and Commitment
- Reliability of Critical Systems and Devices
- Environment Management
- Employee Participation
- Facilities Design and Construction
- Personal safety
- Process Safety Information
- Operation and Maintenance Procedures
- Training
- Risk Analysis and Management
- Occupational Health and Hygiene
- Contractors and Business Associates

Health and Safety Governance

IndianOil's strong governance framework highlights our dedication to maintaining the highest standards of health, safety, and environmental protection across all our operations.

We have a clear and established HSE Policy, authorised by the Board, which directs us to prioritise safety as a core element of our business operations. IndianOil's safety governance is spearheaded by the Chairman and supported by a dedicated HSE department at the corporate, divisional, and unit levels. We formulate corporate-level policies, objectives, and guidelines, which are then executed by the teams at the unit level.

These committees routinely evaluate and assess the effectiveness of safety measures, with active involvement from workforce representatives to address any concerns. Regular reviews are carried out during the Corporate Management Committee meetings, which are attended by the Chairman and Senior Management. Key findings and recommendations are presented to the Board of Directors at each meeting.



Corporate Health, Safety and Environment (HSE) Policy

At IndianOil, we have a dedicated HSE Policy available on our corporate website at https://www.iocl.com/pages/h-s-and-e-policy. This policy applies across all our business operations, including employees and contractors. The policy is designed to improve our HSE performance and ensure transparency within our workplace. As a company, our goal is to achieve zero fatalities. The policy also outlines clear prioritization and action plans to systematically address risks and enhance safety performance, ensuring alignment with sustainability and regulatory standards.

Additionally, we engage with our workers and their representatives regarding our HSE policy to ensure clear communication. The policy is approved and reviewed by our Board members.

Training & Awareness Programmes for HSE

IndianOil has established comprehensive Health and Safety practices for both employees and contract workers, with a primary focus on the Health, Safety, and Environment Management System. Our comprehensive Health and Safety training programmes are designed to equip all personnel with the necessary knowledge and skills to work safely and responsibly, adhering to the highest standards.

Our HSE training programmes are designed to address both proactive and reactive measures in the event of a hazardous incident. The primary aim is to establish preventive strategies in advance, ensuring that our employees and contractors are well-prepared to mitigate risks and avoid any potentially fatal or chronic incidents. The training is structured to equip individuals with the knowledge and skills needed to respond effectively to emergencies, while also fostering a culture of safety that helps prevent incidents from occurring in the first place. We have conducted structured induction and refresher training programme for employees and contract workers in line with the Oil Industry Safety Directorate (OISD) and other relevant safety standards. These include both classroom and practical field sessions, which are focused on hazard identification, risk mitigation, safe operating procedures and emergency response. Specialised training is also offered in key areas such as safety leadership, electrical and construction safety, confined space entry, quantitative risk assessment (QRA) and hazard and operability study (Hazop), incident investigation, live fire training & first-aid training.

Additionally, international certifications such as NEBOSH and targeted programme on lessons from past incidents are regularly imparted to build a safety-first culture across the organisation.

Additionally, we offer division-specific training programmes tailored to the unique nature of each operational unit. These programmes are broadly categorised and designed with specific use cases to benefit both employees and contract workers across various sectors.

- For the Marketing division, we conduct Simulator-based Defensive Driving Training for the Tanker Truck (TT) crew, alongside the use of safety awareness videos to enhance overall safety consciousness. We also facilitate the sharing of learnings from incidents through broadcasted sessions to ensure continuous learning from past experiences.
- For the Refineries unit, newly joined officers undergo training to deliver at least six safety training sessions as instructors to contract workers, under the supervision of senior safety officers. In addition, we have developed educational safety films to familiarise visitors with the refinery layout and its key operations. We also implemented the Suraksha Rath initiative to raise safety awareness among contract workers. Furthermore, Construction Safety Training is offered to F&S officers, and a Process Safety Training in Refineries programme is organised to enhance workforce awareness of process safety measures in refinery operations.
- In the Pipeline units, we offer a variety of training programmes, training on ERDMP, Work Permit, Know Your Station and First-aid. Additionally, we use safety videos focusing on Standard Operating Procedures (SOPs) and critical safety issues to continually improve safety awareness among the workforce

100% of our Refineries and Petrochemicals are fully equipped with occupational health centers

Additionally, we focus on hazard identification, equipping our teams with the skills to recognise potential risks before they escalate, ensuring a proactive approach to safety at all levels. To ensure a safe working environment, we rigorously enforce the requirement for work permits for all individuals engaged in our operations. Furthermore, we have implemented restricted access to specific areas within our facilities for visitors, suppliers, and business partners. These precautions are designed to reduce potential hazards and risks, thereby safeguarding the overall safety and security of all those associated with our organization

Fostering Competence in Process Safety

Competency building for process safety is a critical focus within our organisation, aimed at ensuring that all employees and contractors possess the necessary skills and knowledge to safely manage and operate within high-risk environments. Through a combination of specialised training, practical workshops, and continuous learning opportunities, we empower our teams to identify potential hazards, assess risks, and implement effective safety measures. This proactive approach not only enhances individual capabilities but also reinforces our commitment to maintaining the highest standards of safety across all processes, ultimately safeguarding both personnel and the environment

Health Initiatives

Preventive health check up programmes, Stress management activities & campaigns; Monthly Safety Day, Safety Suggestion Schemes; Hygiene checks; vertigo and confined space tests for specific work.

Safety Management

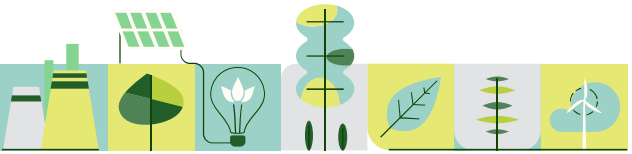
Video filming for Hazard awareness/identification, Regular safety briefings, toolbox talks, Emergency drills; Fire Protection systems, Job Safety analysis, work permit system, Awards & Recognition for commendable safety performance

Communication and Support

Designated hospitals for medical assistance and assessments; Utilisation of various channels for health and safety.

Audits and Compliance

OISD assessments; Board-sanctioned Emergency Response and Disaster Management Plan (ERDMP) by a PNGRB-recognised agency; Routine internal inspections



Risk Assessment and Incident Investigation

Risk identification, safety audits, and incident analysis are integral to our comprehensive safety management system. Through systematic risk identification, we proactively pinpoint potential hazards, allowing us to implement effective measures before issues arise.

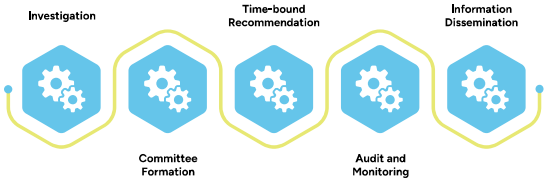
During the project initiation, the process owners/qualified third parties experts conduct hazard identification and risk assessments using methods such as Rapid Risk Analysis (RRA), HAZOP, Hazard Identification (HAZID), Hazard Identification Risk Assessment (HIRA), and Quantitative Risk Assessment (QRA). Hazards are also identified by the end-users and the HSE team during routine operations, audits, and departmental discussions. Additionally, QRA and HAZOP assessments are carried out by qualified third-party experts. Regular health check-ups, along with hazard identification and monitoring, are carried out at the Occupational Health Centre (OHC) within our refineries. These activities are reviewed monthly by the management team to ensure ongoing safety and compliance.

At IndianOil, internal inspections are conducted regularly to ensure adherence to stringent health and safety standards across all operations. These inspections are carried out by qualified safety personnel who thoroughly evaluate workplace conditions, equipment, and safety protocols. The focus is on identifying potential hazards, ensuring compliance with regulatory requirements, and assessing the effectiveness of existing safety measures.

Investigation of Incident

We follow a clearly defined and systematic approach to investigate incidents, ensuring that each step is methodically executed to identify root causes, implement corrective actions, and enhance overall safety protocols:

- **Investigation:** The investigation process at IndianOil begins immediately after an incident occurs. A comprehensive and systematic inquiry is conducted to gather facts, determine the root cause(s), and assess the impact of the incident.
- **Committee Formation:** The incident investigation committee composed of key stakeholders, including senior management, HSE experts, operational heads, and other relevant personnel responsible for overseeing the investigation process, providing expertise, and ensuring that all aspects of the incident are thoroughly examined.
- **Time-bound Recommendations:** Following the investigation, the committee develops time-bound recommendations to address the root causes and prevent recurrence. A clear timeline is set for the implementation of corrective actions, and the progress is tracked regularly to ensure that all necessary measures are taken promptly.
- **Audit and Monitoring:** After the implementation of corrective measures, an audit and monitoring process is set up to ensure that the recommended actions are effective and sustained over time.
- **Information Dissemination:** The findings and lessons learned from the incident investigation are shared across the organisation to ensure transparency and promote a culture of safety.



Emergency Preparedness

At IndianOil, we prioritise emergency preparedness as a core element of our health and safety framework. We have established comprehensive emergency response plans designed to address potential risks and mitigate the impact of unforeseen incidents. These plans are regularly reviewed and updated to ensure their effectiveness, with specific procedures tailored to different types of emergencies. Our teams undergo rigorous training and simulation exercises to ensure they are fully equipped to respond swiftly and efficiently in high-pressure situations. Additionally, we maintain well-established communication channels and coordinate with local authorities and emergency services to ensure a cohesive response during any crisis. This proactive approach helps safeguard the well-being of our employees, contractors, and the surrounding communities, while ensuring the continuity of our operations.

Frequent drills and simulations are carried out to ensure that employees are thoroughly trained and ready to react effectively in the event of an emergency.

- Hazard Identification
- Preventive Measures
- Response Procedures
- Documentation

Our Customer- Centric Approach

A customer-centric approach is integral to our sustainability strategy, ensuring that we not only meet the needs of our clients but also align with their evolving expectations for environmental responsibility. By actively listening to our customers and understanding their values, we are able to tailor our products and services to support a more sustainable future. We prioritise transparency, offering clear information about the environmental impact of our offerings, and collaborate with customers to drive sustainable choices. This approach fosters long-term relationships built on trust, innovation, and shared goals for a greener planet, ensuring that both our business and our customers contribute to positive change

Knowing our customers

Our diverse customer base spans various categories, each with unique needs and expectations. From environmentally conscious individuals seeking sustainable products to businesses aiming for eco-friendly solutions, we cater to a wide range of preferences. By understanding these distinct segments, we are better positioned to deliver tailored solutions that align with their sustainability goals.

Omnichannel engagement with our customers

We engage with our customers through a variety of offline and online methods, such as training programmes, advertisements, and targeted campaigns. Additionally, we utilise digital displays and social media platforms to share valuable information and updates. Statutory messages are also communicated clearly to ensure compliance and clarity. By employing this multi-channel approach, we aim to keep our customers engaged, empower them with the knowledge they need, and ultimately uphold their satisfaction by aligning with their needs and values.

As part of our ongoing enhancement of customer satisfaction, IndianOil has conducted a comprehensive customer satisfaction survey to better understand the expectations and preferences of our consumers. This survey aims to gather valuable insights into how our sustainable practices and offerings are perceived, enabling us to continuously improve and align our services with the growing demand for environmentally responsible solutions. More than 98.36% of the customers who submitted the feedback are satisfied with the services of domestic LPG refill delivery. The feedback collected will play a crucial role in shaping our future sustainability strategies, ensuring we meet the evolving needs of our customers while contributing to a greener future.

- Product Excellence & Innovation
- Outstanding Customer Support
- Customer Education & Engagement

Health & Safety of Consumers and Community

At IndianOil, the health and safety of our consumers and the wider community are paramount. We are committed to ensuring that all our products and services adhere to the highest safety standards, prioritising the well-being of those who rely on us. Through rigorous safety protocols, continuous monitoring, and proactive risk management, we aim to minimise any potential hazards and create a safe environment for both consumers and the communities in which we operate. Our commitment extends beyond compliance, striving to foster a culture of safety and health across all aspects of our operations.

Health and Safety Initiatives

- **Safety Performance**
- **Compliance with Standards**
- **Emergency Preparedness**
- **Community Engagement**

Customer Grievance Redressal Mechanism

We ensure high levels of customer satisfaction by providing an accessible, efficient, and effective Customer Grievance Redressal Mechanism for resolving customer grievances. Customers can easily report their grievances, which are then handled with the utmost priority. By working closely with the relevant teams, we aim to resolve complaints as quickly as possible, ensuring that our customers' voices are heard, and their satisfaction is restored.

Additionally, Customer Relationship Management (CRM) system is designed to ensure seamless communication with customers, providing timely and effective responses to their queries and concerns. This system allows us to track interactions, personalise services, and maintain strong, long-lasting relationships with our customers, ensuring their needs are met efficiently at all times.

- Making direct contact with retail outlets or Indane distributorships using the contact details provided at these location
- Using the complaint log/suggestion book available at Indane distributors or retail outlets (petrol stations).
- Utilising the intuitive online grievance management portal and the IndianOil ONE mobile app.
- Customer Relationship Management (CRM) system to ensure timely responses to complaints received from customers.
- Leveraging the tollfree Call Centre number

Community Development

IndianOil continues to deepen its community engagement through meaningful, on-the-ground interactions with local populations. Our engagements have offered valuable insights into the realities faced by economically disadvantaged groups, helping to identify pressing challenges and formulate targeted, impactful solutions. A number of Corporate Social Responsibility (CSR) initiatives have been rolled out to support vulnerable and marginalized communities, to ensure that their needs, aspirations, and concerns get addressed.

Our initiatives cover a broad spectrum of activities, and these include providing access to clean drinking water, healthcare services, education, women's empowerment, and skill development programmes. By fostering long-term community resilience and well-being, Indian Oil upholds its role as a responsible corporate citizen contributing meaningfully to nation-building. We have sustained our collaborative efforts by actively engaging with local government bodies, non-governmental organisations (NGOs), and community-based groups to assess needs, design appropriate interventions, and execute development projects effectively. These partnerships enable a participatory approach, ensuring that our programmes are rooted in local realities and priorities. Ongoing dialogue, consultation sessions, and structured feedback mechanisms play a vital role in refining our initiatives. This continuous exchange of ideas helps ensure that our efforts remain relevant, responsive, and capable of delivering measurable and lasting benefits to the communities we serve.

IndianOil Foundation: Preserving Heritage through Sustainable Development

The IndianOil Foundation (IOF), a non-profit trust established by IndianOil, plays a vital role in preserving India's cultural heritage and enhancing public access to historically significant sites. In collaboration with the Archaeological Survey of India (ASI) and the National Culture Fund (NCF) under the Ministry of Culture, IOF is committed to developing tourist-friendly infrastructure at heritage locations across the country. By supporting projects that blend conservation with accessibility, IOF contributes meaningfully to the promotion of Indian art, culture, and responsible tourism.

Projects Completed during the Financial Year

- **75-ft Bronze Statue at Namo Ghat, Varanasi**
  As part of the redevelopment of Namo Ghat in Varanasi, IOF installed a monumental 75-foot bronze statue of a pair of human hands in the Namaste posture. The installation has quickly become a prominent cultural landmark, drawing thousands of daily visitors and adding symbolic value to the historic Ghat.
- **Façade Illumination of Lucknow Residency, Uttar Pradesh**
  IOF completed the façade illumination of the 17th-century Lucknow Residency. This monument holds significant historical importance, having been under siege during the Indian Rebellion of 1857. The illumination project used over 1,400 luminaires and a projector, all powered by a 30 kW solar energy system. The project was handed over to the Archaeological Survey of India, enhancing the site's visibility and heritage value.

New Projects Initiated during the Financial Year

- **Tourist Infrastructure Development at Anant Shayan Vishnu and Kapileshwara Temple, Odisha**
  IOF has launched infrastructure development projects at two significant heritage sites in Dhenkanal, Odisha.
  - Anant Shayan Vishnu is a 9th-century open-air horizontal rock relief situated on the banks of the Brahmani River in village Saran.
  - Kapileshwara Temple, dating back to the 14th century, is one of the region's oldest temples in the Dhenkanal District.

Planned interventions include construction of an entrance gate, multipurpose hall, parking area, toilet blocks, pathways, and drinking water facilities to promote tourism while preserving the sites' sanctity.

- **Façade Illumination of the Group of Temples at Pattadakal, Karnataka**
  Work commenced on the façade illumination of the UNESCO World Heritage Site at Pattadakal, a site renowned for its architectural synthesis of northern and southern Indian styles. The project will include comprehensive lighting of the entire temple complex, powered by a 30 KW solar installation, further enhancing visitor experience while promoting sustainable heritage tourism.

INDEPENDENT ASSURANCE STATEMENT

To,
The Directors and Management,
Indian Oil Corporation Limited,
Indian Oil Bhavan, G-9, Ali Yavar Jung Marg,
Bandra (East), Mumbai-400051, India.

Indian Oil Corporation Limited ("hereafter IOCL") engaged TÜV India Private Limited ("TUVI") to conduct an independent external assurance of selected non-financial information disclosed in IOCL's Environmental, Social, and Governance (ESG) Key Performance Indicators ("the ESG data"). The assurance was conducted in accordance with the principles of the Global Reporting Initiative (GRI) Standards. The scope of this assurance engagement covered the reporting period from April 1, 2024, to March 31, 2025. TUVI performed a reasonable assurance in line with the International Standard on Assurance Engagements (ISAE) 3000 (Revised), ISAE 3410, which is specifically applied to the assurance of non-financial and sustainability reporting.

Responsibility for ESG Data and Reporting

"IOCL" is responsible for monitoring its ESG data and identifying material sustainability issues relevant to its operations. This includes the identification, establishment, and reporting of performance management systems, data governance, and quality control measures. The management of IOCL is accountable for the accuracy and completeness of the ESG data, as well as the processes involved in collecting, analysing, and reporting the information disclosed through both web-based and printed formats. This responsibility extends to the maintenance and integrity of the company's website where such information may be presented. IOCL's management is also responsible for preparing the ESG Report with reference to the applied criteria of the Global Reporting Initiative (GRI) Standards. It is incumbent upon IOCL to ensure that the Report is free from any material misstatements, whether intentional or unintentional, thereby maintaining the trust and confidence of stakeholders in the disclosed information. Furthermore, IOCL is responsible for ensuring the archiving and reproducibility of the disclosed ESG data, making it available to stakeholders upon request.

Scope and Boundary

The assurance engagement conducted by TÜV India Private Limited covered the following key activities:

1. **Verification of Report Content and Material Topics:** Assessed the application of the Report's content in accordance with material topics identified through a double materiality approach, and evaluated the quality of information disclosed, as guided by the principles outlined in the Global Reporting Initiative (GRI) Standards, over the defined reporting period.
2. **Review of Governance Policies and Practices:** Examined key governance-related policies and practices referenced in the Report, including the **Code of Conduct**, **Corporate Social Responsibility (CSR) & Sustainable Development** policy, **Prevention of Sexual Harassment (POSH)** policy, and the **Whistle Blower** mechanism, along with related initiatives and performance disclosures.
3. **Review Against GRI Standards Requirements:** Reviewed the non-financial disclosures presented in the Report for alignment with the applicable requirements of the GRI Standards.
4. **Verification of Environmental and Social Data:** Verified the reliability of selected disclosures related to environmental and social topics, by sampling and testing supporting data and documentation.
5. **Assessment of Specified Information for Stakeholder Relevance:** Evaluated the specified ESG information selected for assurance to ensure it reflects material concerns and is meaningful and relevant to the Report's intended stakeholders.

TUVI has verified the below-mentioned disclosures as per GRI Standard 2021.

GRI	Indicators	Disclosure
201	Economic Performance	201-1, 201-4
203	Indirect Economic Impact	203-2, 203-4
205	Anti-Corruption	205-1, 205-2, 205-3
206	Anti-Competitive Behavior	206-1
301	Materials	301-1
302	Energy	302-1, 302-3, 302-4
303	Water and Effluents	303-3, 303-4, 303-5
304	Biodiversity	304-3
305	Emissions	305-1, 305-2, 305-3, 305-4, 305-5, 305-6, 305-7
306	Waste	306-3, 306-4, 306-5
401	Employment	401-1, 401-2, 401-3
403	Occupational Health & Safety	403-8, 403-9, 403-10
404	Training & Education	404-1, 404-2

GRI	Indicators	Disclosure
405	Diversity and Equal Opportunity	405-1
406	Non Discrimination	406-1
407	Freedom of Association and Collective Bargaining	407-1
408	Child Labor	408-1
409	Forced and Compulsory Labor	409-1
412	Human Rights Assessment	412-1, 412-2, 412-3
413	Local Communities	413-1, 413-2
414	Supplier Social Assessment	414-2
415	Public Policy	415-1
417	Marketing & Labelling	417-2, 417-3
418	Customer Privacy	418-1

The reporting boundaries for the above attributes includes IOCL's 626 operating locations, comprising refineries, petrochemical complexes, research & development center, LNG terminals, cryogenic and explosive plants, pipeline pumping stations, offshore single point mooring locations, marketing terminals, aviation fuel stations, lube blending plants, LPG bottling plants, city gas distribution locations, solar & wind power plants and other alternate energy projects among many others including CSR projects *(one sample physical visit was peformed at CSR project located at Jaipur, details are tabulated below)*. Additionally, IOCL operates 226 administrative offices including corporate office. The scope of this assurance does not include the assets that are situated outside of India, as well as joint ventures and subsidiaries of the company.

The assurance activities were carried out together with desk review as per reporting boundary.

Limitations

TUVI did not perform assurance procedures on any forward-looking statements disclosed in the ESG data, including but not limited to targets, forecasts, expectations, or ambitions. As such, TUVI provides no conclusions or opinions regarding this prospective information. Throughout the assurance process, TUVI encountered no limitations to the agreed scope of the engagement. TUVI was engaged by "IOCL" and is accountable solely to IOCL's management in the context of this assurance engagement. Data verification was conducted on a sample basis, and the responsibility for the authenticity and completeness of the data rests entirely with "IOCL". TUVI expressly disclaims any liability or co-responsibility for errors or omissions in the reported data, or for any decisions made by third parties based on this assurance statement. This assurance statement does not constitute an endorsement of any environmental or social claims related to IOCL's products, services, manufacturing processes, packaging, or product disposal. TUVI does not authorize the use of this assurance statement for the purpose of greenwashing or to support any misleading claims.

Our Responsibility

The responsibility of TUVI under this assurance engagement is to perform independent reasonable assurance and to express a conclusion based on the procedures conducted. The engagement was carried out with reference to the agreed scope of work, specifically focused on selected non-financial Environmental, Social, and Governance (ESG) indicators. This engagement did not include an evaluation of the adequacy or effectiveness of IOCL's overall sustainability strategy, governance, or management systems, nor an assessment of the sufficiency of the Report against the overarching principles of the GRI Standards or the ISAE 3000 (Revised), ISAE 3410 standard, beyond the elements explicitly covered within the defined scope. The ESG data was verified on a sample basis, and the responsibility for the accuracy, completeness, and authenticity of the information remains solely with "IOCL". The reporting organization is also accountable for the archiving and retention of all related data for a reasonable period to support transparency and traceability. The primary intended user of this assurance statement is IOCL; however, the client may use it at their own discretion in accordance with their specific requirements.

TUVI **does not assume liability or co-responsibility** for:

1. Any inaccuracies or **erroneous data** reported by "IOCL";
2. Any **decisions made by individuals or entities** based on this assurance statement.

This assurance is provided on the **assumption that all data and information made available to TUVI by "IOCL" were complete, accurate, and true to the best of IOCL's knowledge.**

Verification Methodology

During the assurance engagement, TUVI applied a **risk-based approach**, concentrating verification efforts on the Key Performance Indicators (KPIs) disclosed within the ESG Report. The primary objective was to evaluate the **reliability of the reported information** and the **effectiveness of the underlying data management systems, information flows, and internal controls.**

As part of the engagement, TUVI conducted the following activities:

1. **Review of Stakeholder Engagement and Materiality Process:** Assessed IOCL's approach to stakeholder engagement and the process for identifying and prioritizing material ESG topics, ensuring alignment with established reporting frameworks and principles.
2. **Verification of Disclosures and Internal Controls:** Verified selected disclosures and assertions made in the ESG Report, and evaluated the robustness and adequacy of the related data management systems, information flows, and internal control procedures.
3. **Document Review and Data Assessment:** Examined pertinent documentation, datasets, and other supporting evidence provided by "IOCL" for all reported KPIs. This review was performed on a **sample basis**, focusing on non-financial information disclosures.
4. **Stakeholder Interviews:** Engaged with key personnel, including data owners and decision-makers across relevant functions of "IOCL", during the **onsite verification** phase to gather insights and corroborate information.
5. **Assessment of ESG Policy Implementation:** Conducted sample-based evaluations of the implementation of ESG-related policies as described in the Report to verify adherence and effectiveness.
6. **Verification of Data Generation and Management Processes:** Reviewed, on a sample basis, the procedures for generating, collecting, managing, and reporting both quantitative data and qualitative information included in the ESG disclosures for the reporting period.

Opportunities for Improvement

IOCL is working on focus areas, such as waste management, ESG value chain assessment, ESG-specific work responsibilities, and digital ESG data management, which align with existing management objectives. The assurance team observes that progress on these fronts would support the organization's sustainability goals, and accordingly, potential

opportunities for further improvement areas are detailed in the Management Report, aimed at strengthening the ESG reporting system and ESG performance.

Our Conclusion

In our opinion, and based on the scope of this assurance engagement, the ESG disclosures and related reference information provided by "IOCL" offer a fair representation of the material topics and are aligned with the general content and quality requirements of the applicable Global Reporting Initiative (GRI) Standards. "IOCL" has appropriately disclosed Key Performance Indicators (KPIs) and actions aimed at creating value over the short, medium, and long term. The selected KPIs disclosed by "IOCL" are fairly represented, and the underlying data management processes reflect a commitment to transparency and integrity. TUVI did not perform assurance procedures on forward-looking statements, such as targets, forecasts, expectations, or ambitions presented in the Report. Consequently, no conclusions are drawn on such prospective information. This assurance statement has been prepared in accordance with the terms of our engagement and is limited to the scope and boundaries defined therein.

Disclosures Evaluation:

TUVI is of the opinion that IOCL's ESG disclosures generally meet the requirements of the GRI Standards. The following reporting elements have been appropriately addressed:

- **Universal Standards**:
    1) **GRI 1: Foundation 2021** – Requirements and principles for using the GRI Standards;
    2) **GRI 2: General Disclosures 2021** – Information on IOCL's organizational profile, strategy, ethics and integrity, governance, stakeholder engagement, and reporting practices;
    3) **GRI 3: Material Topics 2021** – Information on IOCL's identification and management of material topics.
- **Topic-Specific Standards**:
    1) **GRI 300 Series (Environmental topics)** and
    2) **GRI 400 Series (Social topics)** – These were applied to report the company's impacts on relevant environmental and social issues. TUVI finds that the **material topics and associated Topic-specific Standards** are **appropriately identified and addressed** in IOCL's ESG disclosures.

Conclusion of Assurance Procedures: Based on the procedures performed and evidence obtained, **nothing has come to our attention** that causes us to believe that the information subject to this **reasonable assurance engagement** was not prepared, in all material respects, in accordance with the stated criteria.

Principles Observed in the Assurance Process

- Independence: TUVI conducted this engagement in compliance with the International Ethics Standards Board for Accountants (IESBA) Code, which adopts a threats and safeguards approach to independence. The assurance team was selected to avoid risks of self-interest, self-review, advocacy, familiarity, or intimidation, ensuring objectivity throughout the engagement.
- Quality Control: TUVI maintains a comprehensive system of quality control, in line with the International Standard on Quality Control (ISQC). The assurance team adhered to the IESBA Code's principles of integrity, objectivity, professional competence and due care, confidentiality, and professional behaviour. All procedures were conducted in accordance with applicable ethical and professional standards.

Statement of Independence and Impartiality

TUVI is an independent and neutral third-party organization providing sustainability assurance services through a team of qualified environmental and social specialists. TUVI affirms its independence and impartiality in relation to this assurance engagement and confirms that no conflict of interest exists. During the reporting year, TUVI did not undertake any other engagements with "IOCL" that could compromise the objectivity, independence, or impartiality of our findings, conclusions, or recommendations. TUVI was not involved in the preparation of any content or data presented in IOCL's ESG Report, with the sole exception of this independent assurance statement. Furthermore, TUVI maintains complete neutrality and impartiality with respect to all individuals interviewed during the course of the assurance process.
